APPENDICES

Introduction

The Burleigh County Multi-Hazard Mitigation Plan (MHMP) is an update of the County's 2020 Multi-Hazard Mitigation Plan. Hazard mitigation plans are required by the Federal Emergency Management Agency (FEMA) to be updated every five years to maintain eligibility for grant funding. The plan is not necessarily limited to Federal, State, or locally declared disasters or emergencies; any time incidents occur that produce an opportunity for mitigation actions; they will be developed and incorporated into the Burleigh County Multi-Hazard Mitigation Plan.

Purpose: Reduce the vulnerability of potential harm to life, information, operations, environment, and/or property in Burleigh County from the impacts of natural, technological, or human-caused occurrences.

Authority: The Burleigh County Multi-Hazard Mitigation Plan has been prepared in accordance with federal laws, including:

Laws

[Robert T. Stafford Disaster Relief and Emergency Assistance Act](#) (Stafford Act), as amended
[National Flood Insurance Act of 1968](#), as amended
[National Dam Safety Program Act](#) (Pub. L. 92-367), as amended

Regulations

[44 CFR Part 201 Mitigation Planning](#)
[44 CFR, Part 60, Subpart A, including § 60.3 Flood plain management criteria for flood-prone areas](#)
[44 CFR Part 77 Flood Mitigation Grants](#)
[44 CFR Part 206 Subpart N. Hazard Mitigation Grant Program](#)

Section 322 of the [Disaster Mitigation Act of 2000](#) requires each mitigation plan developed by a local government shall:

- (1) describe actions to mitigate hazards, risks, and vulnerabilities identified under the plan; and
- (2) establish a strategy to implement those actions.

The [North Dakota Century Code 37-17.1-07](#) (Local or regional emergency management organizations.) states that "Each local or regional emergency management organization shall prepare and keep current a local disaster or emergency operational plan for its area." Burleigh County and incorporated cities consider the Mitigation Plan an integral part of the Burleigh County Emergency Management Program.

Planning Process

The planning process included the following activities:

- Public Input Survey
- Public Meetings
- Meetings with jurisdictions (review data, risk assessment, and mitigation actions)
- Jurisdictional review of proposed MHMP

Additional emails and conversations were completed via phone and email to complete the final draft. Throughout the process, research was completed along with data gathering and outreach (phone calls, meetings, and/or emails) to regulatory agencies and other governmental entities (US Army Corps of Engineers, ND Department of Water Resources, Burleigh County Water Resource Board, ND Forest Service, ND Fire Marshal's Office, US National Weather Service).

City of Wing	Frank Hein	Chief	City of Wing Fire Dept
City of Wing	Kobe Bryant	Department Head	City of Wing Public Works

Multi-hazard mitigation planning is a continuous process whereby risk analyses, updating the situation assessment, research, coordinating, disaster response or other activities are occurring simultaneously.

The goal is to maintain the Burleigh County Hazard Mitigation Plan and obtain federal approval every five years. The original plan was developed in 2003 and subsequently updated in 2009, 2015, and 2020. The current plan update process began in 2024 with the Emergency Manager collecting data and soliciting technical advice and guidance from the ND Department of Emergency Services' Mitigation Division prior to the beginning of the official update plan process. In addition, throughout 2025, the Emergency Manager hosted and/or attended public meetings to revisit the current Multi-Hazard Mitigation Plan and incorporate information where applicable.

- 11-19-24 Annual, publicized, Local Emergency Planning Committee Meeting with agenda item to discuss the Multi-Hazard Mitigation Plan (update process, mitigation projects, grant opportunities). Also discussed the "Shelter in Place" brochure and the "Every Season to Prepare" pamphlet; both items are included as ongoing mitigation projects to promote community preparedness and response to hazards in Burleigh County. An adequate supply of both items is maintained through Emergency Management and other stakeholders as well as being available throughout the community and the Burleigh County website.

- 02-26-25 Multi-Hazard Mitigation Plan planning meeting with Department Heads.

- 03-20-25
Thru
- 04-10-25 Burleigh County Emergency Management published an electronic survey to gather input from the public. Questions were selected to make the experience brief while soliciting hazard vulnerability as well as public's view of the most likely community hazards. Open-ended responses were also included to collect responses the community felt relative to the survey and hazards. A total of 90 responses were received. The survey was emailed to area stakeholders, community responders, and contiguous counties. Results and information captured were compared to the risks analysis and closely aligned. Additionally, information received was factored into the mitigation projects. See Appendix C: Burleigh County Public Survey. The survey was publicly advertised: Radio, Television, The Bismarck Tribune, Burleigh County website, Burleigh County social media, City of Bismarck website, City of Bismarck social media, and Dakota Media Access.

- 03-25-25 Flood Annex Update; reviewed map updates and mitigation projects (status updates as well as new projects) and posted on the Burleigh County website.

- 04-09-25 A regular, publicized, meeting of the Burleigh County Water Resource District with an agenda item for the Emergency Manager to discuss the Multi-Hazard Mitigation Plan process, survey, and solicit projects from the district.

- 05-14-25 A regular, publicized, meeting of the Burleigh County Water Resource District with an agenda item for the Emergency Manager to discuss the Multi-Hazard Mitigation Plan process, survey, and solicit projects from the district.
- 05-19-25 Draft Mitigation Plan published on the website.
- 06-18-25 A regular, publicized, meeting of the Burleigh County Water Resource District with an agenda item for the Emergency Manager to discuss the Multi-Hazard Mitigation Plan process, survey, and solicit projects from the district.
- 07-16-25 A regular, publicized, meeting of the Burleigh County Water Resource District with an agenda item for the Emergency Manager to discuss the Multi-Hazard Mitigation Plan process, survey, and solicit projects from the district.
- 08-11-25 The Emergency Manager scheduled a meeting with the City of Wing to review the current draft of the Mitigation Plan. Mitigation projects and priorities were discussed along with the opportunity to add projects at any time. Discussed generator needs for multiple sites, snow fencing via tree row planting, and an addition to the fire hall.
- 08-13-25 A regular, publicized, meeting of the Burleigh County Water Resource District with an agenda item for the Emergency Manager to discuss the Multi-Hazard Mitigation Plan process, survey, and solicit projects from the district.
- 08-20-25 Meeting with Burleigh County fire departments to discuss burn procedures, staffing and capabilities, radios, wildland urban interface, and mitigation projects.
- 08-25-25 Meeting with Michael Gunsch, Houston Engineering, contracted through the Burleigh County Water Resource District. Reviewed the Flood Annex, Multi-Hazard Mitigation Plan and projects, and the McDowell Dam Emergency Action Plan.
- 08-29-25 The Emergency Manager scheduled a meeting with the City of Wilton to review the current draft of the Mitigation Plan. Mitigation projects and priorities were discussed along with the opportunity to add projects at any time. Discussed generator need for Public Works which is collocated with City Hall.
- 09-03-25 KLOVE Radio Interview (Closer Look) – Preparedness, CodeRed, CERT, LEPC, Emergency Operations Plan, Mitigation Plan, ready.gov (<https://www.klove.com/news/closer-look/hottopx/local-closer-look-burleigh-county-emergency-management-11646>). Interview will replay several times.
- 09-19-25 The Emergency Manager scheduled a meeting with the City Regan to review the current draft of the Mitigation Plan. Mitigation projects and priorities were discussed along with the opportunity to add projects at any time. No more elevator and City is fed by South Central Water.

- 10-10-25 The Emergency Manager scheduled a meeting with the City of Lincoln to review the current draft of the Mitigation Plan and Emergency Operations Plan. Mitigation projects and priorities were discussed along with the opportunity to add projects at any time.
- 10-29-25 Multi-Hazard Mitigation Plan planning meeting with Department Heads.
- 11-02-25 Final draft (available via website) provided to stakeholders to review and provide comment.
- 11-17-25 Mitigation Plan presentation and adoption at the Burleigh County Commission Meeting and advertised through a variety of media.

Participating Jurisdictions

Jurisdictions Located within Burleigh County	Jurisdictions Asked to Participate in the Plan	Jurisdictions Represented in the Plan	Participation Status
Burleigh County	Burleigh County	Burleigh County	Continuing Participation (2003, 2008, 2014, 2020, 2025)
City of Bismarck	City of Bismarck	City of Bismarck	*Continuing Participation (2003, 2008, 2014, 2020, 2025)
City of Lincoln	City of Lincoln	City of Lincoln	Continuing Participation (2003, 2008, 2014, 2020, 2025)
City of Regan	City of Regan	City of Regan	Continuing Participation (2003, 2008, 2014, 2020, 2025)
City of Wilton	City of Wilton	City of Wilton	Continuing Participation (2003, 2008, 2014, 2020, 2025)
City of Wing	City of Wing	City of Wing	Continuing Participation (2003, 2008, 2014, 2020, 2025)

*The City of Bismarck develops an independent Mitigation Plan for their jurisdiction; therefore, they are not an official jurisdiction adopting the Burleigh County Plan. They did participate in the Burleigh County plan development.

Outreach to contiguous counties was accomplished through phone, meeting invites, and online survey invitation.

Adoption Resolutions

Burleigh County

	<p>Burleigh County 221 N 5th St Bismarck ND 58501 701.222.6718 burleigh.gov</p>	
<p>2025 Burleigh County Multi-Hazard Mitigation Plan</p> <p>Whereas Burleigh County recognizes the threat that natural, man-made or technological hazards pose to people and property within Burleigh County; and</p> <p>Whereas Burleigh County has prepared the 2025 “Burleigh County Multi-Hazard Mitigation Plan” in accordance with federal laws, including the Robert T. Subsequent plan updates following the approval period for this plan will require separate adoption resolutions.</p> <p>Signed this 17th day of November 2025</p> <div style="text-align: center; margin-top: 20px;">  Brian Bitner, Chairperson Burleigh County Commission </div>		

City of Lincoln

2025 Burleigh County Multi-Hazard Mitigation Plan

Whereas the City of Lincoln recognizes the threat that natural, man-made or technological hazards pose to people and property within the City of Lincoln; and

Whereas Burleigh County has prepared the 2025 “Burleigh County Multi-Hazard Mitigation Plan” in accordance with federal laws, including the Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended; the National Flood Insurance Act of 1968, as amended; and the National Dam Safety Program Act, as amended; and

Whereas the 2025 “Burleigh County Multi-Hazard Mitigation Plan” identifies mitigation goals and actions to reduce or eliminate long-term risk to people and property in the City of Lincoln from the impacts of future hazards and disasters; and

Whereas adoption by the City of Lincoln demonstrates its commitment to hazard mitigation and achieving the goals outlined in the 2025 “Burleigh County Multi-Hazard Mitigation Plan”.

Now, therefore, be it resolved, by the City of Lincoln, North Dakota, that:

The City of Lincoln Commission adopts the 2025 “Burleigh County Multi-Hazard Mitigation Plan”. While content related to the City of Lincoln may require revisions to meet the plan approval requirements, changes occurring after adoption will not require the City of Lincoln to re-adopt any further iterations of the plan. Subsequent plan updates following the approval period for this plan will require separate adoption resolutions.

Signed this 6th day of November, 2025

Keli Berglund, Mayor
City of Lincoln Commission

City of Regan

2025 Burleigh County Multi-Hazard Mitigation Plan

Whereas the City of Regan recognizes the threat that natural, man-made or technological hazards pose to people and property within the City of Regan; and

Whereas Burleigh County has prepared the 2025 “Burleigh County Multi-Hazard Mitigation Plan” in accordance with federal laws, including the [Robert T. Stafford Disaster Relief and Emergency Assistance Act](#), as amended; the [National Flood Insurance Act of 1968](#), as amended; and the [National Dam Safety Program Act](#), as amended; and

Whereas the 2025 “Burleigh County Multi-Hazard Mitigation Plan” identifies mitigation goals and actions to reduce or eliminate long-term risk to people and property in the City of Regan from the impacts of future hazards and disasters; and

Whereas adoption by the City of Regan demonstrates its commitment to hazard mitigation and achieving the goals outlined in the 2025 “Burleigh County Multi-Hazard Mitigation Plan”.

Now, therefore, be it resolved, by the City of Regan, North Dakota, that:

The City of Regan Commission adopts the 2025 “Burleigh County Multi-Hazard Mitigation Plan”. While content related to the City of Regan may require revisions to meet the plan approval requirements, changes occurring after adoption will not require the City of Regan to re-adopt any further iterations of the plan. Subsequent plan updates following the approval period for this plan will require separate adoption resolutions.

Signed this 5 day of November, 2025

Marvin Gillig, Mayor
City of Regan Commission

City of Wilton

2025 Burleigh County Multi-Hazard Mitigation Plan

Whereas the City of Wilton recognizes the threat that natural, man-made or technological hazards pose to people and property within the City of Wilton; and

Whereas Burleigh County has prepared the 2025 “Burleigh County Multi-Hazard Mitigation Plan” in accordance with federal laws, including the Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended; the National Flood Insurance Act of 1968, as amended; and the National Dam Safety Program Act, as amended; and

Whereas the 2025 “Burleigh County Multi-Hazard Mitigation Plan” identifies mitigation goals and actions to reduce or eliminate long-term risk to people and property in the City of Wilton from the impacts of future hazards and disasters; and

Whereas adoption by the City of Wilton demonstrates its commitment to hazard mitigation and achieving the goals outlined in the 2025 “Burleigh County Multi-Hazard Mitigation Plan”.

Now, therefore, be it resolved, by the City of Wilton, North Dakota, that:

The City of Wilton Commission adopts the 2025 “Burleigh County Multi-Hazard Mitigation Plan”. While content related to the City of Wilton may require revisions to meet the plan approval requirements, changes occurring after adoption will not require the City of Wilton to re-adopt any further iterations of the plan. Subsequent plan updates following the approval period for this plan will require separate adoption resolutions.

Signed this 5 day of Nov, 2025

LeeAnn Domonoske-Kellar, Mayor
City of Wilton Commission

City of Wing

2025 Burleigh County Multi-Hazard Mitigation Plan

Whereas the City of Wing recognizes the threat that natural, man-made or technological hazards pose to people and property within the City of Wing; and

Whereas Burleigh County has prepared the 2025 “Burleigh County Multi-Hazard Mitigation Plan” in accordance with federal laws, including the Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended; the National Flood Insurance Act of 1968, as amended; and the National Dam Safety Program Act, as amended; and

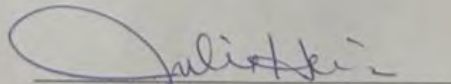

Whereas the 2025 “Burleigh County Multi-Hazard Mitigation Plan” identifies mitigation goals and actions to reduce or eliminate long-term risk to people and property in the City of Wing from the impacts of future hazards and disasters; and

Whereas adoption by the City of Wing demonstrates its commitment to hazard mitigation and achieving the goals outlined in the 2025 “Burleigh County Multi-Hazard Mitigation Plan”.

Now, therefore, be it resolved, by the City of Wing, North Dakota, that:

The City of Wing Commission adopts the 2025 “Burleigh County Multi-Hazard Mitigation Plan”. While content related to the City of Wing may require revisions to meet the plan approval requirements, changes occurring after adoption will not require the City of Wing to re-adopt any further iterations of the plan. Subsequent plan updates following the approval period for this plan will require separate adoption resolutions.

Signed this 6th day of November 2025

Julie Hein, Mayor
City of Wing ~~Commission~~ Council

Existing Plans, Studies, Reports, and Technical Information

The Burleigh County Multi-Hazard Mitigation Plan was developed in coordination with local, state, and federal agencies, non-profit organizations, local businesses, schools, and the public. The Cities of Lincoln, Regan, Wing and Wilton support county-led planning initiatives. Additionally, the Planning Team will continue to ensure the Mitigation Plan informs the plans and programs listed below by incorporating risk assessment data and mitigation actions.

The American Red Cross includes the shelter information provided by Burleigh County Emergency Management within their National Shelter System.

The Burleigh County Commission and Burleigh County Highway Department utilize the mitigation projects as appropriate when developing future budgets and road priorities.

Flood mitigation projects are closely tied to the Burleigh County Water Resource Board and their continuing discussions as well as the Burleigh County Flood Annex. The Burleigh County Zoning Floodplain Ordinance is evaluated and based on NFIP guidelines.

Information from the 2020 Mitigation Plan and actions were integrated into generator grant requests for Bismarck Rural Fire, City of Wilton, City of Lincoln, and the Burleigh County Sheriff's Department. Information from the 2020 Mitigation Plan was also considered when updating the 2025 Burleigh County Flood Annex. Risk assessment and capabilities for all jurisdictions is considered during updates of the Burleigh County Emergency Operations Plan.

Communicable Disease activities parallel the Southwest Central Emergency Preparedness planning efforts.

The US National Weather Service (Bismarck Office) remains in close contact with Burleigh County Emergency Management and Skywarn Spotters to "truth" forecasts and/or impacts.

Burleigh County is pursuing participation in the Community Rating System which was not influenced by this plan as much as reducing insurance rates.

Other integrations that correlate, not primarily based on this plan, are based on established rules, regulations and/or codes.

(Page intentionally left blank)

Community Profile

Burleigh County is in south-central North Dakota with five incorporated cities including the county seat, Bismarck, and the Missouri River as the western boundary.

City	Population
Burleigh County	98,458
Bismarck	75,092
Lincoln	4,257
Regan	35
Wilton	718
Wing	132

Source: [US Census Bureau](#) 2020 Census

Burleigh County has 1,632.7 square miles of land area and is the 13th largest county in North Dakota by total area with a population of 98,458 ([US Census Bureau](#)). Residential and commercial development is concentrated in the incorporated areas of Burleigh County with the largest, single concentration occurring in and around the City of Bismarck.

Burleigh County is on the western side of the continental divide and drains through the Missouri River drainage system.

Rivers
Missouri River, Apple Creek, Burnt Creek, and Hay Creek

Demographics

The 2024 population estimate is 103,107; a 4.7% increase from the 2020 population of 98,458.

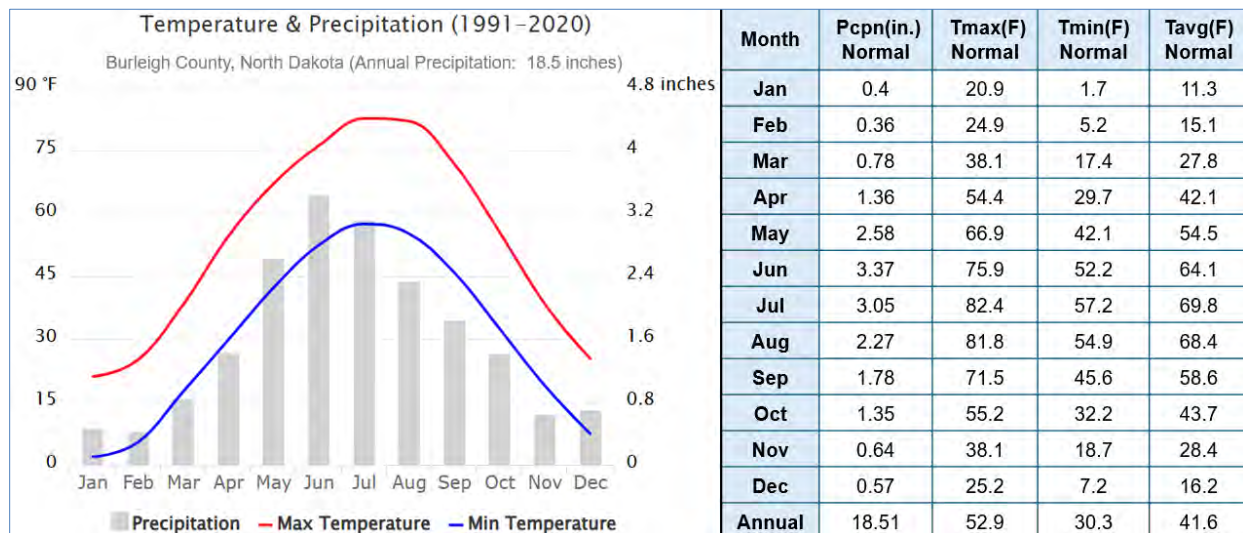

Source: [US Census Bureau](#)

Climate

General Climate Type - Continental. Temperature and precipitation are the two parameters traditionally used to describe general, large-scale climate types.

Temperature. The Northern Great Plains (NGP) region in general and South-central North Dakota (Burleigh County) in particular, has an extreme [continental climate](#) characterized by a very high annual variation in temperature (warm summers and cold winters) and a high daily range in temperatures, as compared to maritime climates. These high ranges in temperature are mainly due to the area’s location: in the mid-north latitudes (between 45.935° and 49.00° N), along the north border of the continental United States, centered in the North American Continent, and far from the modifying effect of oceans.

Precipitation. Moisture is a second key component of climate, with North Dakota effectively straddling “the transition from the moist eastern United States and the semiarid West” ([Frankson, 2022](#)). A high daily range in temperature is primarily due to the lower [heat capacity](#) of dry air and dry soils as compared to humid air and either moist soils or large bodies of water, so that dryer air and dryer soil will both warm and cool at a faster rate than wetter air or soil ([Wikipedia: Climate of ND, 2023](#)).

The figure above shows the average monthly precipitation and the range of monthly average high and low temperatures for the Burleigh County area during the most recent 30-year climate normal period, 1991-2020 ([XM-ACIS, 2025](#); [Climate Toolbox, 2024](#)).

Economy

The largest percentage of population (23.8%) is employed in “Educational services, and health care and social assistance”, median household income was \$85,172, with poverty at 7.5%.

Source: [US Census Bureau 2023 American Community Survey](#)

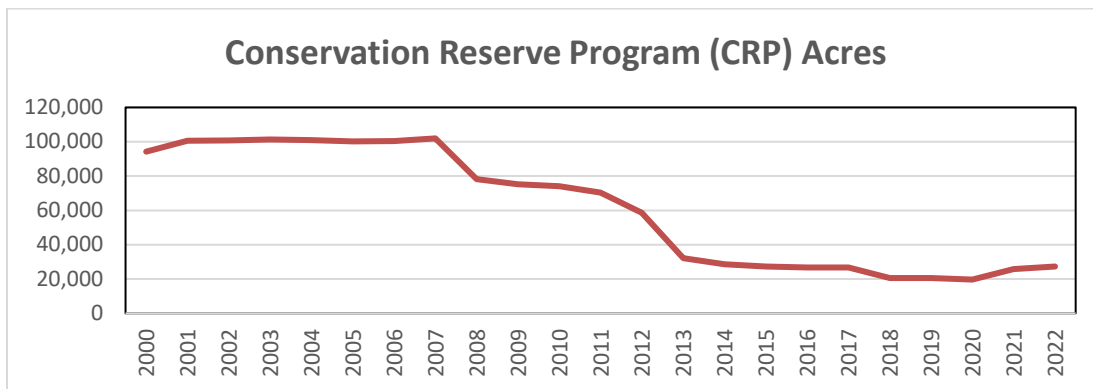

Source: [US Census Bureau 2023 American Community Survey](#)

Land Use Concerns

The primary landscape of Burleigh County, 73%, is equally split between rolling pasturelands and croplands, with less than 7% developed as residential or commercial property. The remaining 20% is composed of rolling prairie, wetlands, small lakes, and federal or state wildlife management areas (USDA, 2022; Stout, 1974). Woodlands make up less than 1% of the landscape in the county, primarily as homestead shelterbelts or urban plantings (Claeys, 2020).

There were 709 farms in 2022 (10% decrease from 2017) averaging 1,103 acres per farm. (Source: [USDA Census of Agriculture](#)) Soil erosion due to wind and water remains a problem. On steep gradients, rain washes out gullies in cultivated fields, and fields cultivated in the fall suffer wind damage. Acreage (27,264) in the 2022 Conservation Reserve Program helped mitigate some erosion.

Data Source: [US Department of Agriculture, Farm Service Agency](#)

Burleigh County continues to study a variety of mitigation activities. Soil erosion, water supply, and water quality are concerns of the county.

The Burleigh County floodplain ordinance was last updated in 2024: Additionally, the Burleigh County Water Resource District utilizes previous flood event data when considering flood control projects and includes non-structural project recommendations such as amending floodplain ordinances in direct correlation with National Flood Insurance Program recommendations and FEMA’s flood insurance rate map data.

Development

A map showing development in Burleigh County for the past five years show the majority of development within 2-4-miles around the City of Bismarck. Effects on local response is the potential of increased calls as well as increased road mileage for snow and potential debris removal. Development is also vulnerable to rural fires. The City of Lincoln has also seen increased development and annexed the mobile home community east of 66th Street Southeast. The mobile home community will increase response activities and raise concerns during high-wind events, while the rest of the development could increase response calls. Regan, Wilton, and Wing have not had any significant developments.

The Bismarck Mandan Chamber EDC and local jurisdictions promote and encourage opportunities for the area as a destination to live, work, and play. The ND oil boom peaked in 2012-2013 which resulted in increased population and development.

(Source: [US Census Bureau](https://www.census.gov))

Risk Assessment

The 15 hazards identified by the ND Department of Emergency Services were utilized for the risk assessment. (Source: [ND Enhanced Mitigation Mission Area Operations Plan, 2024-2029](#))

Natural Hazards	Technological Hazards	Human-Caused Incidents
Drought	Dam Failure	Civil Disturbance
Flood	Hazardous Materials Release	Criminal Attack
Geologic Hazards	Transportation Incident	Cyberattack
Infectious Disease and Pest Infestation		Terrorist or Nation-State Attack
Severe Summer Weather		
Severe Winter Weather		
Space Weather		
Wildfire/Urban Fire		

- **Natural hazards:** acts of nature. The natural hazards identified in this plan are Flood, Fire, Drought, Severe Winter Weather, Severe Summer Weather, Infectious Disease and Pest Infestation, Space Weather and Geologic Hazards.
- **Technological hazards:** accidents or the failures of systems and structures. Technological hazards in this plan include Dam Failure, Hazardous Material Release, and Transportation Incidents.
- **Human-caused incidents:** the intentional actions of an adversary. Human-caused incidents in this plan include Cyberattack, Criminal Attack, Civil Disturbance and Terrorist or Nation-State Attack.

Risk Assessment by Jurisdiction					
Hazard	Burleigh County	Lincoln	Regan	Wilton	Wing
Civil Disturbance	X	X	X	X	X
Criminal, Terrorist or Nation-State Attack	X	X	X	X	X
Cyberattack	X	X	X	X	X
Dam Failure	X	X			
Drought	X	X	X	X	X
Fire (urban and wildland)	X	X	X	X	X
Flood	X	X	X	X	X
Geologic Hazards	X				
Hazardous Materials Release	X	X	X	X	X
Infectious Disease and Pest Infestation	X	X	X	X	X
Severe Summer Weather	X	X	X	X	X
Severe Winter	X	X	X	X	X
Space Weather	X	X	X	X	X
Transportation Incident	X	X		X	X

The jurisdictions are affected by the hazards with slight variances in susceptibility. Changes in development and land use has not affected community vulnerability.

Civil Disturbance and Criminal, Terrorist, or Nation/State Attack

All jurisdictions could be impacted; however, greater vulnerability would be anticipated in the most populous city and capital of North Dakota—City of Bismarck. The greatest threat would be significant impact to critical facilities and/or infrastructure.

Dam Failure

Two, high-hazard dams present significant risks to several sections of Burleigh County. Failure of the Garrison Dam in McLean County could affect the southwest section of Burleigh County (including the Cities of Bismarck and Lincoln) as discussed in the Dam Failure section. Failure of the Heart Butte Dam in Grant County could affect portions in far southwest Burleigh County.

Drought

Rural Burleigh County (farmland acreage) would suffer significant agricultural losses, and grain elevators (Sterling, and Wilton) and agronomy centers may suffer losses due to drought and loss of crops.

Water Supplies: The South Central Regional Water District is the major supplier for Burleigh County. The City of Bismarck Public Works supplies water to the majority of the City of Lincoln (mobile home court and industrial area to the north of the mobile home court through South Central Regional Water District) and areas of Burleigh County that border the City of Bismarck. Water supply is adequate with rare requests to decrease water consumption during periods of drought/extreme heat.

In addition to South Central Regional Water:

- City of Lincoln has two, gravity-fed water towers with a 500,000-gallon capacity for each tower.
- City of Regan continues to have maintained wells and individual septic systems.
- City of Wilton has one, gravity-fed water tower with a 300,000-gallon capacity.
- City of Wing has one, gravity-fed water tower with a 50,000-gallon capacity.

Resources for potable water supplies are identified in the Burleigh County Emergency Operations Plan.

Fire

The impacts of drought and wildland fire could impact city residents in several ways; however, rural Burleigh County is more susceptible to these hazards due to open prairie and agricultural activities especially in areas around the cities (wildland urban interface). The incorporated cities are more vulnerable to urban fire with losses greater in the more populated cities.

Flood

The following figure displays that no jurisdiction is immune to flood vulnerability and has either experienced the vulnerability or has the increasing susceptibility to experience the vulnerability. Additionally, inundation maps show the vulnerability and can be found in the Attachments.

Flood Vulnerabilities by Jurisdiction						
	Burleigh County	Bismarck	Lincoln	Regan	Wilton	Wing
Creek/River Flooding	X	X	X			
Overland or Flash Flooding	X	X	X	X	X	X
Ice Jam Flooding	X	X	X			
Lift Stations	X	X	Gravity Flow		Gravity Flow	X
Lagoon Overruns	X	X	X			
Road Washouts	X	X	X	X	X	X

Overland or flash flooding and road washouts are common to all jurisdictions. Regan, Wilton, Wing are not susceptible to creek/river flooding and ice jam flooding since they are not located adjacent to a creek or river. Likewise, they are also not near lagoons.

Burleigh County remains prepared through review and update of the [Burleigh County Flood Annex](#). Inundation maps with varying scenarios and specific locations of residents and infrastructure are provided in the [Burleigh County Flood Annex](#) through the Missouri River and Apple Creek Stages and response primarily affecting southwest Burleigh County with the possibility of also reaching the City of Lincoln. As stated in the [Flood Annex](#), the County Highway Department, Sheriff, Emergency Management, local support agencies (Bismarck Rural Fire, Sterling Rual Fire, Wilton Rural Fire, and Lincoln Police) will help to monitor rural areas and the smaller communities for localized overland or flash flooding issues, in addition to monitoring the more frequent flood risk areas along rivers and creeks. Burleigh County also maintains an [interactive flood and elevation tool](#) mapping tool which shows various effects based on forecast Missouri River and Apple Creek stages.

Geologic Hazards

No jurisdictions have significant history of this hazard.

An area of rural SW Burleigh County along the southern portion of Apple Creek has experienced some bank failures and slumping; no structures affected. University of Mary is currently undergoing a bank stabilization project uphill from Apple Creek. Areas along River Road in north Bismarck and rural Burleigh County (Western County border) also experience some sloughing from the grade of the eastern ridge with no structures affected. Both areas are monitored by the Burleigh County Highway Department via drone photography.

The Double Ditch Indian Village State Historical Site (SW Burleigh County) suffered severe erosion caused by the 2011 Missouri River flood and has undergone bank stabilization. The site is monitored by the ND Historical Society on a biannual basis to include drone aerial inspections.

Hazardous Materials Release and Transportation Incident

Varied levels of susceptibility are apparent for all jurisdictions. Highway 83 runs through the western side of Burleigh County (including the Cities of Bismarck and Wilton). Additionally, Interstate 94 transects the middle of Burleigh County through the City of Bismarck and near the City of Lincoln. Railroad tracks run through Burleigh County, Bismarck, and Wilton. The City of Regan is located approximately ½ mile north of Highway 36, which is not a major transportation route. Throughout the year, farmers transport anhydrous ammonia in pup tanks.

The City of Bismarck is far more susceptible to the hazards due to being an urban center with the highest population density in Burleigh County. Other factors increasing susceptibility include:

- State Capitol
- Government Buildings (local, state, and federal)
- Higher Education Facilities
- Numerous Medical Facilities
- Tourism Destination
- Commercial and Agricultural Industries
- Increased Number of Impervious Surfaces
- Increased Transportation Flow

Hazardous Materials Release and Transportation Incident						
	Burleigh County	Bismarck	Lincoln	Regan	Wilton	Wing
Anhydrous Ammonia	X	X	X	X	X	X
Bulk Fuel	X	X	X		X	X
Bulk Fertilizer	X	X				
Farm Chemicals	X	X	X	X	X	X
Propane	X	X	X		X	X
Fuel and Gas	X	X	X	X	X	X
Natural Gas	X	X	X		X	
Major Transportation Route	X	X	X		X	
Railroad	X	X	X		X	

Infectious Diseases and Pest Infestations

Each jurisdiction is susceptible to infectious diseases and pest infestations; however, the more rural communities of Regan, Wilton, and Wing and unincorporated Burleigh County are particularly susceptible to diseases that impact plants and animals. The cities are more susceptible to communicable disease due to population density.

Severe Summer Weather

All jurisdictions are impacted by severe summer weather and its subtypes with frequency during the core summer months of June, July and August, but can start as early as March or April, usually by mid-May, and persist past mid-September, even into early November (tornadoes occurred in Bismarck on November 1, 2000). Severe summer weather incidents may cause major economic losses based on the level of impact. Windstorms may result in downed power lines coupled with damage from flying debris and damage to facilities. Mobile home dwellings are encouraged to have tie-downs. Bismarck, Lincoln, Wilton, and Wing maintain and test outdoor warning sirens. Wilton also utilizes their sirens to alert fire or ambulance crews.

Severe Winter Weather

All jurisdictions are impacted by severe winter weather and its subtypes with frequency generally during the period from mid-November through early April. Severe winter weather often results in blocked roads and can affect each jurisdiction and may lead to economic loss dependent upon severity and length of time. Rural Burleigh County residents have backup power sources (generators and/or coal or wood-burning stoves) and extra fuel sources (gas and propane). Windstorms may result in downed power lines coupled with damage from flying debris and damage to facilities.

Space Weather

No jurisdictions have any significant history of this hazard. Disruption of critical facilities and infrastructure would have a significant effect on each jurisdiction to include medical, law, fire, and facilities dependents on satellite data. Emergency services will continue to operate in a diminished capacity if there is a disruption to communications technology.

Bismarck/Burleigh: Critical facilities with backup power include both hospitals, the City/County Building, Provident Building (County Building), Central Dakota Communications Center (911), Emergency Operations Center, Bismarck Police Department, Burleigh County Sheriff's Office, Bismarck/Burleigh Public Health.

Lincoln: Critical facilities without backup power include Lincoln City Hall/Lincoln Police Department, Lincoln Public Works Facility, two Pump Stations, and Lift Station (listed as mitigation projects in Attachments)

Wilton: The Wilton Ambulance and Wilton Senior Center (utilized as a shelter) have a backup generator; however, the following critical facilities do not have backup power: Wilton City Hall/Fire Department, and Wilton Water Tower.

Wing: Critical facilities without backup power include the City of Wing Fire Department/City Hall, water tower, two wells (new water treatment building), and two lift stations (listed as mitigation projects in Attachments).

Critical Facilities

Critical facilities and infrastructure are assets essential to public safety and continuity of government operations. Damaged or destroyed facilities or infrastructure could have debilitating effects on safety, security, public health, or the economy in Burleigh County, including Lincoln, Regan, Wilton, and Wing.

The hazards most likely to impact critical facilities are cyberattack, flood, hazardous materials release, severe summer weather, severe winter weather, and space weather.

- **Cyberattack:** Critical facilities utilize computerized system(s) as a main function of providing services.
- **Flood:** Flooding of the Missouri River and Apple Creek cause damage to homes in the western part Burleigh County and the City of Bismarck as well as farmland and rural homes along the creek areas. During flooding events, roads may become inundated with water and cut off accessibility to critical facilities.
- **Hazardous Materials Release:** Hazardous materials are transported via three modes into and within Burleigh County: Highways, Railroad, and Air. Dependent upon location of release, critical facilities could be affected with damage or complete loss.
- **Space Weather:** Solar flares would impact communications, solar radiation storms will impact satellites, and geomagnetic storms will cause the greatest damage—disrupting navigation systems such as the Global Navigation Satellite System (GNSS) and creating harmful geomagnetic-induced currents (GICs) in the power grid and pipelines. It's possible for these storms to cause power grid energy spikes, which could trigger fires, power blackouts and physically harm individuals coming into contact with storm-spiked wires or pipelines.
- **Summer Weather:** Extreme heat, hail, lightning, high winds, and tornadoes may cause damage or complete loss to some critical facilities in Burleigh County.
- **Winter Weather:** Major arterials are vulnerable to becoming blocked with snow making them impassible. Many county and township roads become blocked during winter storms and cities are largely affected by winter storms.

Major facilities and infrastructure:

Category	Type
Communications	Cell Towers Communication Towers Information/Data/Record Centers Media
Emergency Services	Law Fire Emergency Medical Services (EMS) ND National Guard Public Safety Answering Points (PSAPs)/911 Centers Public Works
Energy/Utility	Electric Power Generation and Substations Pipelines Transmission Lines Utility Companies Water Distribution Systems Water Towers Water Treatment Plants
Financial Institutions	Banks Credit Unions
Government	Courthouses Jails Schools
Industrial and Storage	Food Processing and/or Storage Fuel Health and Medical Supplies Major Industries
Medical	Clinics Hospitals Long-Term Care Facilities Pharmacies
Transportation	Airports Highways/Bridges Railroads

Hazards Excluded or Minimally Addressed in this Plan

Hazard	Notes
Avalanche	Avalanches require slopes that generally do not exist in Burleigh County. Burleigh County is not covered by the National Avalanche Center and has no history of declared avalanche disasters.
Climate Change	Climate change is addressed as a condition that impacts most hazards and not as a separate hazard.
Coastal Erosion	Burleigh County does not have an ocean coastline.
Coastal Storm	Burleigh County does not have an ocean coastline.
Hurricane	Burleigh County does not have an ocean coastline.
Public Utility Failure	Utility failure is viewed as a consequence of other hazards and not as a separate hazard.
Shortage/Outage of Critical Materials	Lack of critical materials is viewed as a consequence of other hazards and not as a separate hazard.
Tsunami	Burleigh County does not have an ocean coastline.
Volcano	Burleigh County has no identified volcanoes; however, volcanic ashfall can occur over Burleigh County, but the frequency is rare, and the potential impacts are not expected to exceed local capabilities. The impact of an external volcano is discussed in geologic hazards.
Windstorm	Windstorms are identified in severe summer and severe winter weather hazards.

(Page intentionally left blank)

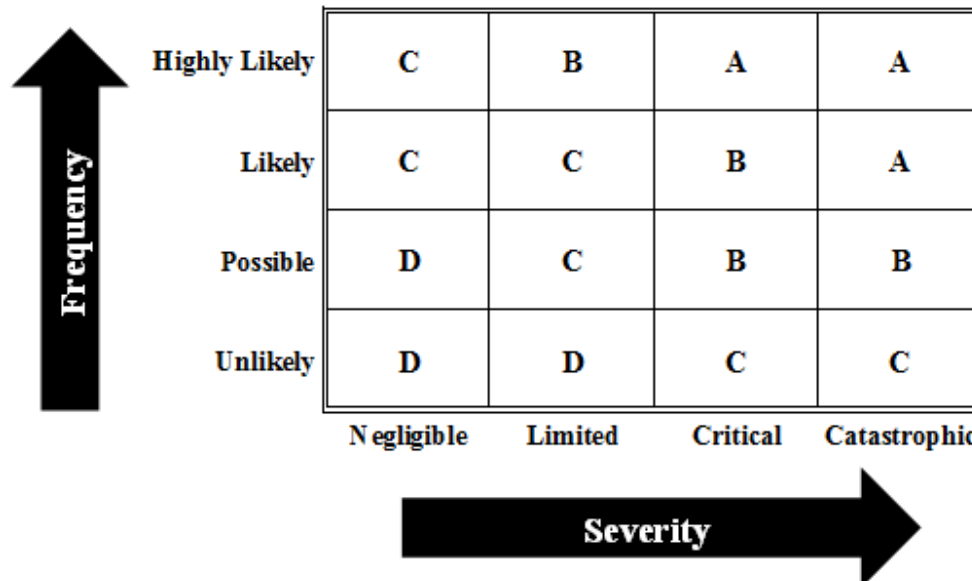

Risk Analysis Worksheet

Frequency: How often is this hazard likely to develop in this area?

- Highly Likely Nearly 100% probability in the next year
- Likely 10–100% probability in the next year, or at least 1 chance in next 10 years
- Possible 1–10% probability in the next year, or at least 1 chance in next 100 years
- Unlikely Less than 1% probability in next 100 years

Severity: What is the expected extent of damage caused by this type of hazard?

- Catastrophic More than 50% of jurisdiction affected
- Critical 25–50% of jurisdiction affected
- Limited 10–25% of jurisdiction affected
- Negligible Less than 10% of jurisdiction affected

(Source: [Risk Assessment Matrix](#) and [FEMA Multi-Hazard Identification and Risk Assessment, January 1, 1997, Risk Assessment Approaches – Chapter/Section Number: Part 3](#))

Risk Class: Classification of the overall risk posed to the jurisdiction and immediacy of necessary action:

Seasonal Pattern: When is the type of hazard most likely to occur?

Probable Duration: How long will this event typically have an impact on the community?

Speed of Onset: How much advance warning does the community have for this type of event?

Location/Jurisdiction: Which areas are affected?

Risks: Types of situations that might result from the hazard.

Overall Vulnerability Summary

HAZARD	Description
Civil Disturbance	No change.
Criminal, Terrorist or Nation-State Attack	No change.
Cyberattack	Changed from Possible to Highly Likely due to history and trends
Dam Failure	No change.
Drought	No change.
Fire	No change.
Flood	No change.
Geologic Hazards	Changed from Likely to Highly Likely due to radon inclusion
Hazardous Materials Release	No change.
Infectious Diseases and Pest Infestations	No change.
Severe Summer Weather	No change.
Severe Winter Weather	No change.
Space Weather	Change from Possible to Likely due to history
Transportation Accident	No change.

Damage Assessment

An in-house GIS mapping application was created to assess damages from nearly any hazard.

Source: Burleigh County GIS

The assessment includes:

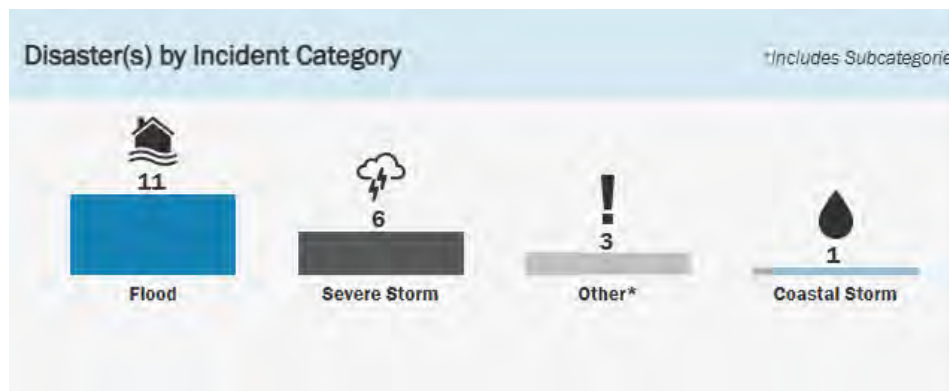

- Any geometric shape
- Population within the shape
- Critical infrastructure
- Properties with assessed structures
- Assessed structure values
- Breakdown of the major structure types

Hazards

Civil Disturbance

Frequency	Likely (10-100% probability in the next year, or at least 1 chance in next 10 years)
Severity	Limited (10-25% of jurisdiction affected)
Risk Class	C
Seasonal Pattern	None
Duration	Hours/Days
Speed of Onset	No warning
Location	Countywide
Impacts	Blocked Roads, Business Interruptions, Delayed Emergency Response, Increased Public Safety Runs, Property Damage

Description

Civil disturbances are defined as group acts of violence and disorders prejudicial to public law and order; terrorist incidents, a form of civil disturbance, are defined as distinct criminal acts committed or threatened to be committed by a group or individual to advance a political objective. (Source: [U.S. Department of Justice Office of Justice Programs](#))

Civil disturbances can occur anywhere in Burleigh County. Most civil disturbances are local in scale and within the capability and responsibility of local law enforcement. It is not possible to predict the location of a civil disturbance; however, large venue locations such as stadiums, government facilities, industrial facilities, and locations with correctional facilities may be more susceptible to such incidents.

History

Smaller-scale riots and assaults can and have occurred in correctional facilities located within Burleigh County:

- Bismarck Transition Center
- Burleigh/Morton Detention Center
- ND Missouri River Correctional Center
- ND State Penitentiary

2016: The Dakota Access Pipeline (DAPL) project resulted in multiple criminal activities including acts of vandalism, trespassing, riots, vehicles, hay bales and tires set on fire, and the arrest of 709 protesters. The protestors gathered to express concern about the installation of an 1134-mile-long crude oil pipeline across North Dakota and other states. The protest transitioned into an unlawful assembly and civil disorder on August 10, 2016, when individuals attempted to block access to construction activities associated with the pipeline. Originally an environmental-focused event, it quickly grew from a few hundred participants to numbers estimated near 10,000. It also expanded its scope to include real or perceived concerns surrounding Native American rights, as well as a myriad of other environmental concerns not necessarily associated with construction of the DAPL. Widespread criminal activity spawned from the protest, to include vandalism, terroristic threats, and intimidation tactics directed at local landowners as well as law enforcement and their families, doxing of law enforcement and other officials (doxing is the Internet-based practice of researching and broadcasting private or identifiable information), arson, poaching, and the theft and killing of livestock in the area. The majority of activities occurred in Morton and Sioux Counties; however, Burleigh and Emmons Counties also experienced activity on a smaller scale. (Source: ND State Emergency Operations Plan, December 2018)

Criminal, Terrorist, or Nation-State Attack

Frequency	Possible (1-10% probability in next year, or at least 1 chance in next 100 years)
Severity	Limited (10-25% of jurisdiction affected)
Risk Class	C
Seasonal Pattern	None
Duration	Hours/Days
Speed of Onset	No warning
Location	Countywide
Impacts	Blocked Roads, Building Collapse, Business Interruptions, Delayed Emergency Response, Downed Power Lines, Evacuation (Localized), Explosion, HAZMAT Release, Increased Public Safety Runs, Livestock Injury/Death, Loss of Economy, Loss/Overcrowded Medical Facilities, Loss of Potable Water, Loss of Power, Mass Casualties, Property Damage, School Closure

Description

[International Humanitarian Law](#) defines attacks as acts of violence against the adversary, whether in offense or defense in whatever territory conducted. Criminal attack can occur anywhere, including a residence. Mass attacks, such as shooting, are more likely to occur where there is a gathering of people with the potential to be victims.

The [Federal Bureau of Investigation \(FBI\)](#) identifies two categories:

International terrorism: Violent, criminal acts committed by individuals and/or groups who are inspired by, or associated with, designated foreign terrorist organizations or nations (state-sponsored)

Domestic terrorism: Violent, criminal acts committed by individuals and/or groups to further ideological goals stemming from domestic influences, such as those of a political, religious, social, racial, or environmental nature

As one of the largest urban centers and the State Capital, Bismarck is far more susceptible to this risk than other jurisdictions within the County.

History

Although there have been no National Security Emergencies specific to Burleigh County, any suspicious activity is reported to the ND State and Local Intelligence Center.

Jurisdiction	Number of Crimes		
	2023	2022	2021
Bismarck Police Department	6,515	6,793	7,731
Bismarck State College	25	18	
Burleigh County Sheriff's Office	991	865	1,036
Lincoln Police Department	196	255	211

Source: [ND Bureau of Criminal Investigation](#)

Cyberattack

Frequency	Highly Likely (Nearly 100% probability in the next year)
Severity	Critical (25-50% of jurisdiction affected)
Risk Class	A
Seasonal Pattern	None
Duration	Days/Weeks
Speed of Onset	None
Location	Countywide

Description

Hacker, attacker, or intruder — These terms are applied to the people who seek to exploit weaknesses in software and computer systems for their own gain. Although their intentions are sometimes benign and motivated by curiosity, their actions are typically in violation of the intended use of the systems they are exploiting. The results can range from mere mischief (creating a virus with no intentionally negative impact) to malicious activity (stealing or altering information). Source: [Cybersecurity and Infrastructure Security Agency](#)

Unified Cybersecurity Approach

April 11, 2019: [Senate Bill 2110](#) was signed by the Governor to make ND the first state to authorize a central, shared service approach to cybersecurity strategy across all aspects of state government including state, local, legislative, judicial, K-12 education and higher education. The state network has 252,000 daily users and more than 400 entities.

Identified Impacts

- Blocked Roads
- Business Interruptions
- Delayed Emergency Response
- Loss of Economy
- Loss of Power

History

Cyberattacks occur daily and are mitigated through protected networks and servers through the ND Department of Information Technology (NDITD) and the City of Bismarck Information Technology Department. NDITD has a robust service for cyber security, governance, and risk and compliance services for political subdivisions (including Burleigh County). Source: [NDITD Website](#)

Publicly Known Attacks

2025, February: Cyberattack shut down most systems at Lee Enterprises, the parent company of The Bismarck Tribune. The Bismarck Tribune returned to normal operations by the end of March, 2025. (Source: [The Bismarck Tribune, 2025](#))

2025, January: Bismarck along with other North Dakota school districts, was impacted by a nationwide data breach involving PowerSchool, a software company that manages sensitive student and staff data for many school systems. The breach involved PowerSchool's customer support portal, PowerSource, where an unknown entity gained unauthorized access and downloaded an undisclosed number of records. An investigation by cybersecurity company CrowdStrike found that a prior hack occurred between August and September of 2024. PowerSchool reached a financial agreement with the hackers to have the sensitive information destroyed. (Source: [KFYR TV, 2025](#))

2022, October: CommonSpirit Health, the fourth-largest health system in the nation, had to reschedule surgeries and appointments due to a ransomware attack. St. Alexius Health was among the CommonSpirit hospitals hit in the attack. It took five days to restore regular business. Ambulances and life-sustaining surgeries were not impacted in Bismarck. (Source: [The Bismarck Tribune, 2022](#)).

2022, June: ND Workforce Safety and Insurance was a victim of a cybersecurity attack involving personal data via an email attachment. (Source: [ND Workforce Safety and Insurance website](#))

2019, February: Bismarck Public Schools suffered a vicious malware attack resulting in a severe data breach (names, addresses, emails, and phone numbers of individuals had been accessed). It should be noted that this was a nationwide breach through a software and other schools throughout the State of North Dakota were also affected.

2016: During the Dakota Access Pipeline (DAPL) criminal protests, unknown individual(s) released personally identifying information of local officials and law enforcement officers who assisted in the protest response with the intent to have others harass and/or intimidate them or their families. This attack was accomplished through Doxing emails and social media posts, which publicly identifies or publishes private information about someone, especially as a form of punishment or revenge.

Dam Failure

Frequency	Possible (1-10% probability in next year, or at least 1 chance in next 100 years)
Severity	Critical (25-50% of jurisdiction affected)
Risk Class	B
Seasonal Pattern	Spring/Summer
Duration	Days/Weeks
Speed of Onset	Little warning
Location	Burleigh County, Lincoln

Description

A dam is a structure that is built across a river or body of water to hold, divert, or regulate water. Often the body of water stored behind a dam is referred to as the reservoir or lake.

Source: [United States Army Corps of Engineers National Inventory of Dams](#)

Several low-head dams are located in Burleigh County (all within five miles from the City of Bismarck). The [ND Department of Water Resources definition](#): “Low head dams are usually simple concrete or rock masonry structures that span the width of the river or stream, raising the water level behind them until it reaches a height sufficient to flow over the dam. These low head dams can create dangerous conditions that the public may not be aware of or may underestimate. Under the right conditions, water flowing over the dam can cause a “roller effect” on the downstream side of the dam. Strong recirculating currents can trap and drown boaters, swimmers, or other members of the public.”

Because low head dams are known to be dangerous, the ND Department of Water Resources provides free cautionary safety signs to the owners of these dams. Multiple signs per dam will be provided; however, installation is a local responsibility.

Identified Impacts

- Blocked Roads
- Building Collapse
- Business Interruptions
- Delayed Emergency Response
- Downed Power Lines
- Downed Trees

History – There is no history of a dam failure within the County.

The [ND Department of Water Resources](#) identifies 257 dams (structure type) in Burleigh County. All dams have an element of hazard to cause loss of life and property damage should the dam fail. One dam is classified as “Significant”, and one dam is classified as “High”; both have Emergency Action Plans. Rural Burleigh County, Bismarck, and Lincoln are at risk for dam failure while dams do not pose a threat to the cities of Regan, Wilton, and Wing. No other dam failures in the jurisdiction affect critical infrastructure but may cause agricultural or environmental damage.

Dam failure hazard classifications (High, Significant, Low) assess the potential consequences of a dam failure, specifically risks to human life and economic/environmental damage downstream, rather than the dam's physical condition or structural integrity. These classifications determine maintenance standards, emergency action planning, and regulatory oversight.

Hazard Classifications ([FEMA Federal Guidelines for Dam Safety](#))

- **LOW HAZARD POTENTIAL** Dams assigned the low hazard potential classification are those where failure or misoperation results in no probable loss of human life and low economic and/or environmental losses. Losses are principally limited to the owner’s property.
- **SIGNIFICANT HAZARD POTENTIAL** Dams assigned the significant hazard potential classification are those dams where failure or mis-operation results in no probable loss of human life but can cause economic loss, environmental damage, disruption of lifeline facilities, or can impact other concerns. Significant hazard potential classification dams are often located in predominantly rural or agricultural areas but could be located in areas with population and significant infrastructure.
- **HIGH HAZARD POTENTIAL** Dams assigned the high hazard potential classification are those where failure or mis-operation will probably cause loss of human life.

Location	Type	Status	Structure Name	Purpose	Hazard Class

Source: [ND Department of Water Resources](#)

The “Jackman Coulee Dam 2” is flood control structure located within the City of Bismarck (1135 Edwards Avenue). The structure is on the western edge of the “Tom O’Leary Golf Course”. Failure of the urban dam classified as “high” would most likely result in environmental and home damages (200+) and/or loss due to location.

Source: [ND Department of Water Resources](#)

Source: Google Maps [Website](#)

McDowell Dam is a recreation area located five miles east of Bismarck (1951 93rd Street NE). Available activities include swimming, boating, fishing, and paddle boating. Failure of the rural dam classified as “significant” would most likely result in environmental and home loss (approximately 100) due to location. Inundation maps with varying scenarios and specific locations of residents and infrastructure are listed in the Emergency Action Plan.

Lake Sakakawea was formed by construction of the Garrison Dam in 1953, covering 368,000 surface acres with maximum storage of 24.5 million acre-feet, and 1,600 miles of shoreline in six counties. Total failure of the dam could affect approximately 21,568 people and 6,465 properties with an assessed value of \$1,845,005,873 utilizing the Burleigh County Damage Estimator.

Source: Burleigh County GIS

The U.S. Army Corps of Engineers, Omaha District, completed a Dam Safety Modification Study in June 2023 at Garrison Dam, near Riverdale, North Dakota. The study evaluated what repairs or improvements are needed to address structural concerns at certain places at the project, primarily within the spillway. These concerns pose risks to USACE's ability to operate the dam during extreme flood events. The Dam Safety Modification Study also recommended a risk management plan to support the expeditious and cost-effective reduction of the risk posed by these concerns. Recommendations include modifications to the spillway that collectively address dam safety concerns with modernized designs. Key elements of these recommendations include:

- the full replacement of the spillway's drainage system to remove manhole covers from inside the spillway to prevent the covers from dislodging during future spillway operations.
- placement of a reinforced concrete overlay in the spillway chute and stilling basin to ensure the spillway can safely pass extreme flows
- armoring the area behind the spillway chute walls to reduce potential for erosion during extreme flows
- raising the spillway abutment monoliths to prevent overtopping which can lead to erosion and failure of the structure
- constructing a deflector beam to deflect the overflow from spillway gates
- modifying the gates' trunnion hubs to ensure they are structurally sound, and
- improving the system that deices the gates so they remain operational during winter conditions.
-

Over approximately the next six years, USACE will conduct field investigations to collect data to inform the detailed design and develop plans and specifications that are necessary to award a contract to complete these recommendations. As of 2023, construction is anticipated to begin in 2029 and take several years to complete. (Source: [US Army Corps of Engineers Omaha District Website](#))

Any construction brings potential vulnerabilities. Burleigh County reviews project status updates and remains prepared through review and update of the [Burleigh County Flood Annex](#). Inundation maps with varying scenarios and specific locations of residents and infrastructure are provided in the [Burleigh County Flood Annex](#) through the Missouri River Stages and Response primarily affecting the west (border) and southwest Burleigh County. A full breach has the potential to affect the City of Lincoln. Burleigh County also maintains an [interactive flood and elevation tool](#) mapping tool which shows various effects based on forecast Missouri River stages.

Heart Butte Dam and Reservoir, or Lake Tschida (renamed in 1958), is in Grant County in the southwestern part of North Dakota and approximately 70 miles southwest of Bismarck (Burleigh County). Heart Butte Reservoir has a total capacity of 214,169 acre-feet at the top of the exclusive flood control, of which 147,027 acre-feet are for flood control storage, 67,142 acre-feet for active conservation, and 5,227 acre-feet for dead storage. The lake covers an area of 6,738 acres at the top of flood control. (Source: [Heart Butte Reservoir Resource Management Plan, December 2006](#)) A Heart Butte Dam hydrologically induced static failure scenario could affect approximately 23,517 people and 7,375 properties with assessed value of \$2,279,321,037 utilizing the Burleigh County Damage Estimator.

Heart Butte Dam will be modified to correct seepage issues with reservoir drawdown during construction. Construction is anticipated for spring of 2027.

Sweetbriar Creek Dam is located in Morton County approximately 20 miles west of Bismarck. The dam is on Sweetbriar Creek, a tributary of the Heart River, and rated as a significant hazard potential dam. A breach would be absorbed by the Heart River which flows into the Missouri River near Fox Island with no significant affect to Burleigh County. ([Sweetbriar Creek Dam Updated Hydrology, Dam Break Analysis, and Hazard Classification](#))

Drought

Frequency	Likely (10-100% probability in the next year, or at least 1 chance in next 10 years)
Severity	Limited (10-25% of jurisdiction affected)
Risk Class	C
Seasonal Pattern	Summer
Duration	Weeks/Months
Speed of Onset	Slow onset
Location	Countywide

Description

In the most general sense, drought is defined as a deficiency of precipitation over an extended period of time (usually a season or more), resulting in a water shortage. (Source: [National Drought Mitigation Center](#))

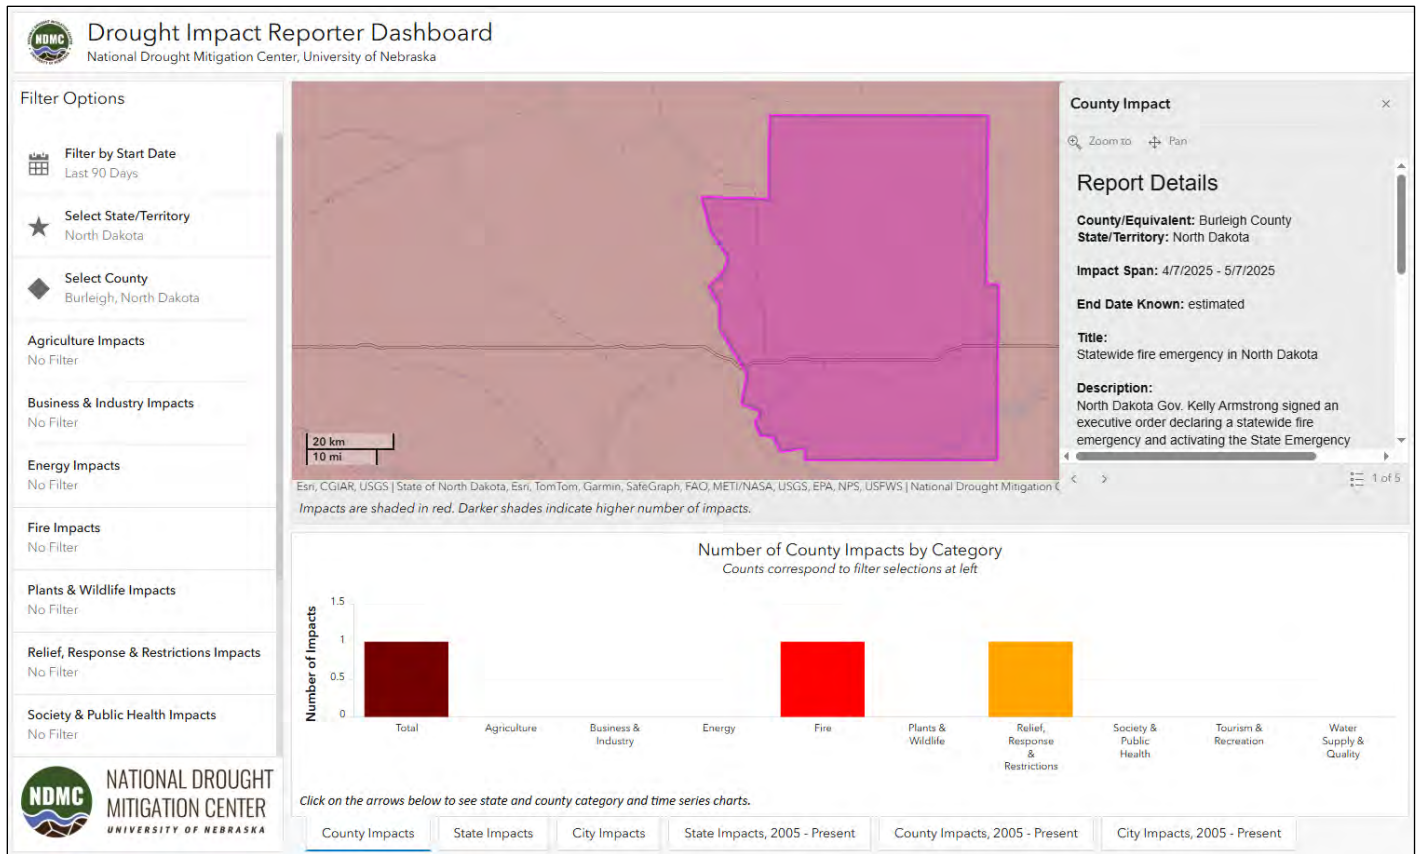

The [National Integrated Drought Information System](#) identifies types of drought:

- **Meteorological Drought** is based on the degree of dryness or rainfall deficit and the length of the dry period.
- **Hydrological Drought** is based on the impact of rainfall deficits on the water supply such as stream flow, reservoir and lake levels, and ground water table decline.
- **Agricultural Drought** refers to the impacts on agriculture by factors such as rainfall deficits, soil water deficits, reduced ground water, or reservoir levels needed for irrigation.
- **Socioeconomic Drought** considers the impact of drought conditions (meteorological, agricultural, or hydrological drought) on supply and demand of some economic goods such as fruits, vegetables, grains and meat. Socioeconomic drought occurs when the demand for an economic good exceeds supply as a result of a weather-related deficit in water supply.

Identified Impacts

- Business Interruptions
- Increased Fire Potential
- Livestock Injury/Death
- Loss of Economy
- Loss of Potable Water
- Property Damage

The [Drought Impact Reporter](#) presents drought impacts recorded for states, counties, and cities with earliest impacts dated 1850.

History

May, 2017 – Voluntary water restrictions requested in City of Bismarck and City of Lincoln due to low water reservoirs as a result of a period of increased temperatures.

March-July, 2017 – A least 268 rural wildfires reported to the ND Department of Emergency Services, with more than 55% reported in July. (Source: [The Bismarck Tribune](#), July 21, 2017)

June 1, 1988 – Excessive heat reported in Burleigh County with crop damages estimated over \$20 million.

Excessive Heat

Location	Date	Type	Dth	Inj	PrD	CrD
BURLEIGH	07/16/2011	Excessive Heat	0	0	0.00K	0.00K

Fire

(Including urban fire or structure collapse and wildland fire)

Frequency	Highly Likely (Nearly 100% probability in the next year)
Severity	Negligible (Less than 10 of jurisdiction affected)
Risk Class	C
Seasonal Pattern	None
Duration	Hours/Days
Speed of Onset	No warning
Location	Countywide

Descriptions

Source: [National Fire Protection Association Glossary of Terms](#)

Urban

“An incorporated or unincorporated area with a population of over 30,000 people and/or a population density over 1,000 people per square mile but less than 2,999.”

Structure Collapse (Fire Fighting)

“The activities of rescue, fire suppression, and property conservation in buildings or other structures, vehicles, rail cars, marine vessels, aircraft, or like properties.”

Wildland Fire (Wildfire)

“An event dealing with a fire in the wildland; originating from an unplanned ignition, such as lightning, volcanos, unauthorized and accidental human-caused fires, and prescribed fires that are declared wildfires.”

Wildland/Urban Interface

“A geographical area where structures and other human development meet or intermingle with wildland or vegetative fuels, resulting in the potential for ignition of the structures within the area from flames or firebrands of a wildland fire.”

Identified Impacts

- Blocked Roads
- Building Collapse
- Business Interruptions
- Delayed Emergency Response
- Downed Power Lines
- Downed Trees
- Evacuation (Localized)
- Explosion
- HAZMAT Release
-
- Increased Fire Potential
- Increased Public Safety Runs
- Livestock Injury/Death
- Loss of Economy
- Loss/Overcrowded Medical Facilities
- Loss of Power
- Mass Casualties
- Property Damage
- School Closure

History

Urban fires are rare in occurrence and affect the more populated areas with the City of Bismarck having the highest population density.

Rural Burleigh County experiences wildland fires every year. Factors influencing the potential include amounts and conditions of fuel supply (vegetation), temperatures, wind conditions, precipitation patterns, humidity levels, topography, and levels of human activity on the land.

The main fire season normally begins when weather warms significantly, and precipitation is limited. This longer and more dangerous season extends until about October 30th or until the first significant snow cover.

Most wildland fires result from activities such as: controlled burns of sloughs, ditches, and fields by landowners; recreational activity such as camping, hunting, and other off-road vehicle travel; and use of fireworks preceding and immediately following the 4th of July.

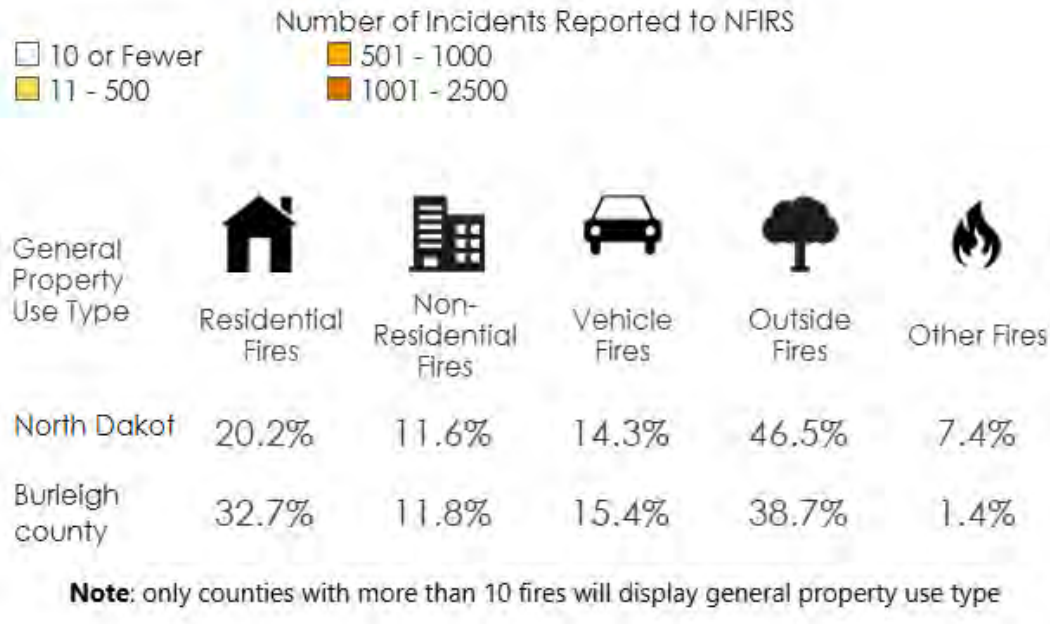

Bismarck Rural Fire Department extinguishing a scheduled burn which got out of control at Hawktree Golf Course northwest of Bismarck (Source: [The Bismarck Tribune](#), March 10, 2016).

National Fire Incident Reporting System (NFIRS)

North Dakota reported 12,842 fires to the National Fire Incident Reporting System (NFIRS) between 2015 and 2019.

Now, select a county on the map to learn more about the types of fires reported in North Dakota.

Several wildland fires occur annually; some of the more significant incidents are listed below:

October 12-13, 2024 – Recreational hunting caused a wildfire near Double Ditch involved 22 agencies including deployment of two ND National Guard Blackhawks and burned approximately 1,100 acres (no structures lost).

April 12-15, 2015 – An abandoned campfire developed into a large wildfire in southwest Burleigh County, south of Bismarck, by the afternoon of April 13th, which led to the evacuation of approximately 20 residences. It is believed that the fire initially started on April 12th. The fire was assumed contained the evening of April 13th and work was done to extinguish hot spots. The fire re-intensified on April 14th as relative humidity values dropped to around 15%, and southerly winds gusted to nearly 40 mph. This led to the evacuation of multiple neighborhoods south of the City of Bismarck, along with the University of Mary campus. The North Dakota Department of Health urged residents of Bismarck to use caution as the smoke was pushing over parts of the city. The fire was re-contained the evening of the 14th. Thirty-four separate agencies were involved in the wildfire response, and approximately 2,000 acres were burned. No lives or homes were lost. ND National Guard air support for fire suppression was utilized.

May 24, 2008 – A prescribed burn at the Long Lake Wildlife Refuge escaped containment, burning over 650 acres of private and refuge land.

July 18, 2006 - A fire, 15 miles north of Bismarck, quickly consumed 500 acres of vegetation after igniting in tall grass near a farmstead. The fire spread to the structures on the farm. Two barns, a granary, and corrals were lost to the fire before it was brought under control.

April 8, 2005 - Strong southerly winds gusting to 45 mph combine with low relative humidities and dry pastures, created red flag conditions in North Dakota. A large grass fire developed east of Wilton. The fire became very large in size, creating its own weather conditions. Winds shifted entrapping 3 rural firefighters. One firefighter suffered a broken leg while two others suffered second and third-degree burns.

April 9, 2003 – McLean Bottoms fire disaster (Burleigh and Emmons County). Wildland fire occurred on US Army Corps of Engineer land in Emmons County along the Missouri River. The fire continued to spread into Burleigh County on Corps land leased by North Dakota Game and Fish. Estimated 6,500 acres lost.

March 24, 2003 - Grass fire one mile north and one mile east of McKenzie (5700 NE 249th St).

Flood

(Including riverine, overland, and flash floods)

Frequency	Likely (10-100% probability in the next year, or at least 1 chance in next 10 years)
Severity	Limited (10-25% of jurisdiction affected)
Risk Class	C
Seasonal Pattern	Spring and Summer
Duration	1 to 10 days
Speed of Onset	More than 24 hours warning
Location	Countywide

Description

Flooding is the flow of water over normally dry land areas. It can be caused by the overflow of inland waters, heavier rainfall than normal during a particular period, snowmelt, or the runoff of surface waters from any source. Floods are typically a natural phenomenon but are often intensified by the alteration of natural conditions by human activities

Three types common to Burleigh County are Riverine, Overland, and Flash Flooding. Where Riverine is constrained to the river and creek channels and immediate area (flood when their levels rise enough to cover normally dry land areas), Overland and Flash Flooding (fast-moving, high volume of water flows into a normally dry area causing water levels to rapidly increase in a short period of time) can occur anywhere in the county. The main difference being that Flash Flooding has a more rapid onset (within 6 hours of the cause) and shorter duration (usually less than 12 hours) than Overland Flooding.

In simple terms, a flood is an excess of water on land that normally is dry. For example, water damage to your home from a river that overflowed into nearby streets and yards would be a direct result of flooding. (Source: [Federal Emergency Management Agency, National Flood Insurance Program](#))

What causes floods?

Flooding can happen anywhere, and at any time. Weather events commonly cause floods. Changes to the environment — like new buildings — and infrastructure failures — like a broken water main — can play a role, too.

Flood insurance covers many weather, environmental and infrastructure causes of floods, including:

- River, lake or coastal water overflows.
- Heavy or extensive rainfall.
- Melting snow and ice in spring.
- Changes to the land, such as new buildings and sidewalks or burned grass and trees after a wildfire.
- Water seeping through a dam, or levee or a broken water main.

Source: [Federal Emergency Management Agency, National Flood Insurance Program](#)

Flash Flood: Inundation or depth based on soil saturation and rainfall rate using [Flash Flood Guidance](#).

Areal Flood: Inundation or depth based on saturation, rainfall, and [inundation](#) using [Flash Flood Guidance](#).

Extent for Flash or Areal/Overland Flooding

Class	IBW Tag*	Description
Minor	Base (no tag)	Use most of the time, when flash (areal) flood impact damage is possible.
Moderate	Considerable	Use rarely, when there are indications flash (areal) flooding capable of unusual severity or impact is imminent or ongoing and urgent action is needed to protect lives and property.
Major	Catastrophic	Use exceedingly rarely, when a flash (areal) flood threat to life and catastrophic damage is occurring or is imminent, and floodwaters have risen or will rise to levels rarely if ever seen.

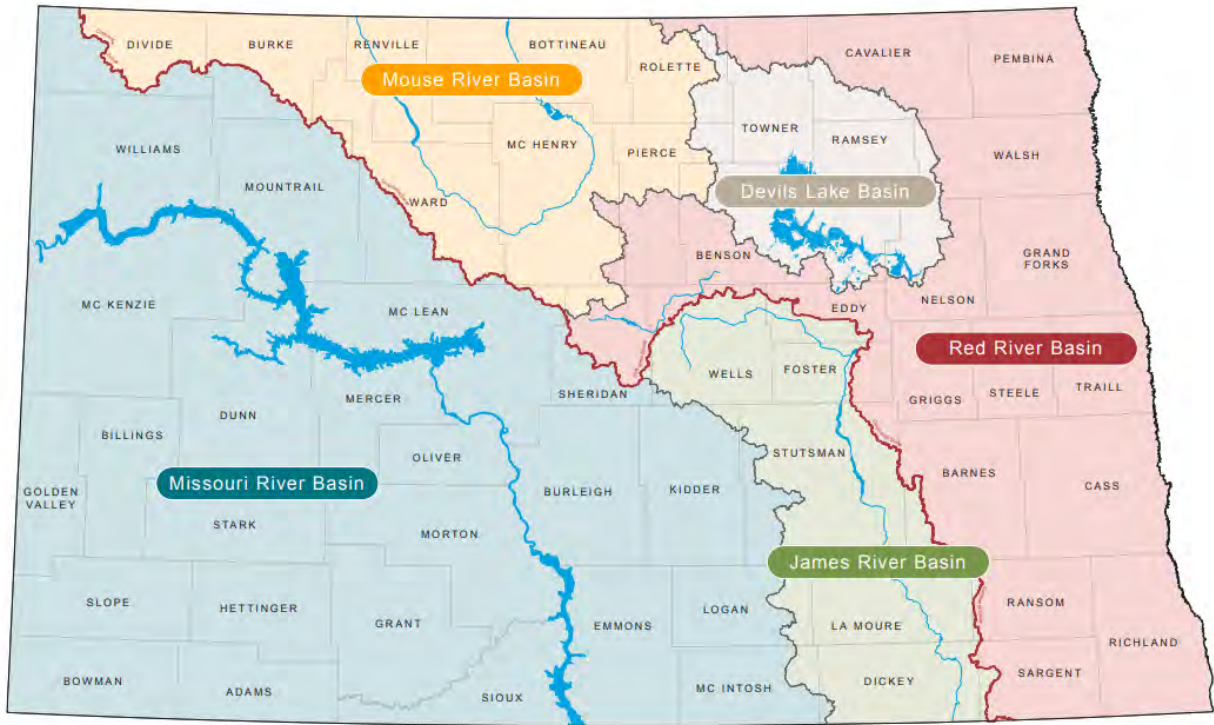

Missouri River Basin

The Missouri River was once free flowing with meandering braided channels, sand bars, and expansive tree-covered riparian areas. The river was free to make its own banks, which were ever changing, and seasonal flooding was a common occurrence.

Today, six dams and reservoir projects make up the Missouri River reservoir system. All of these dams were constructed by the federal government and are maintained and operated by the USACE for the following authorized purposes:

- Flood Control
- Water Supply
- Recreation
- Irrigation
- Hydropower
- Water Quality
- Fish and Wildlife
- Navigation

The first dam that was constructed was Fort Peck in Montana. Fort Peck was constructed under Congressional authorization from the Rivers and Harbors Act of 1935. The other five mainstem dams on the Missouri River were later built in cooperation between the USACE and the Bureau of Reclamation under the Pick-Sloan Plan. The Pick-Sloan Plan was part of the Flood Control Act of 1944. (Source: [Missouri River Today Brochure](#))

Hydrologic Analyses

Hydrologic analyses were completed on the following areas as part of the Flood Insurance Study, Burleigh County, North Dakota, and Incorporated Areas, Revised: August 4, 2014 (available from the [FEMA Map Service Center](#), Product 38015CV000B):

- Apple Creek
- Burnt Creek
- Grande Prairie Watersheds (Remmick, Grande Prairie Estates, Wachter)
- Hay Creek and North Valley Tributary
- Jackman Coulee
- Landfill Watershed
- Missouri River
- North 4th Street Watershed
- North Washington Street Watershed

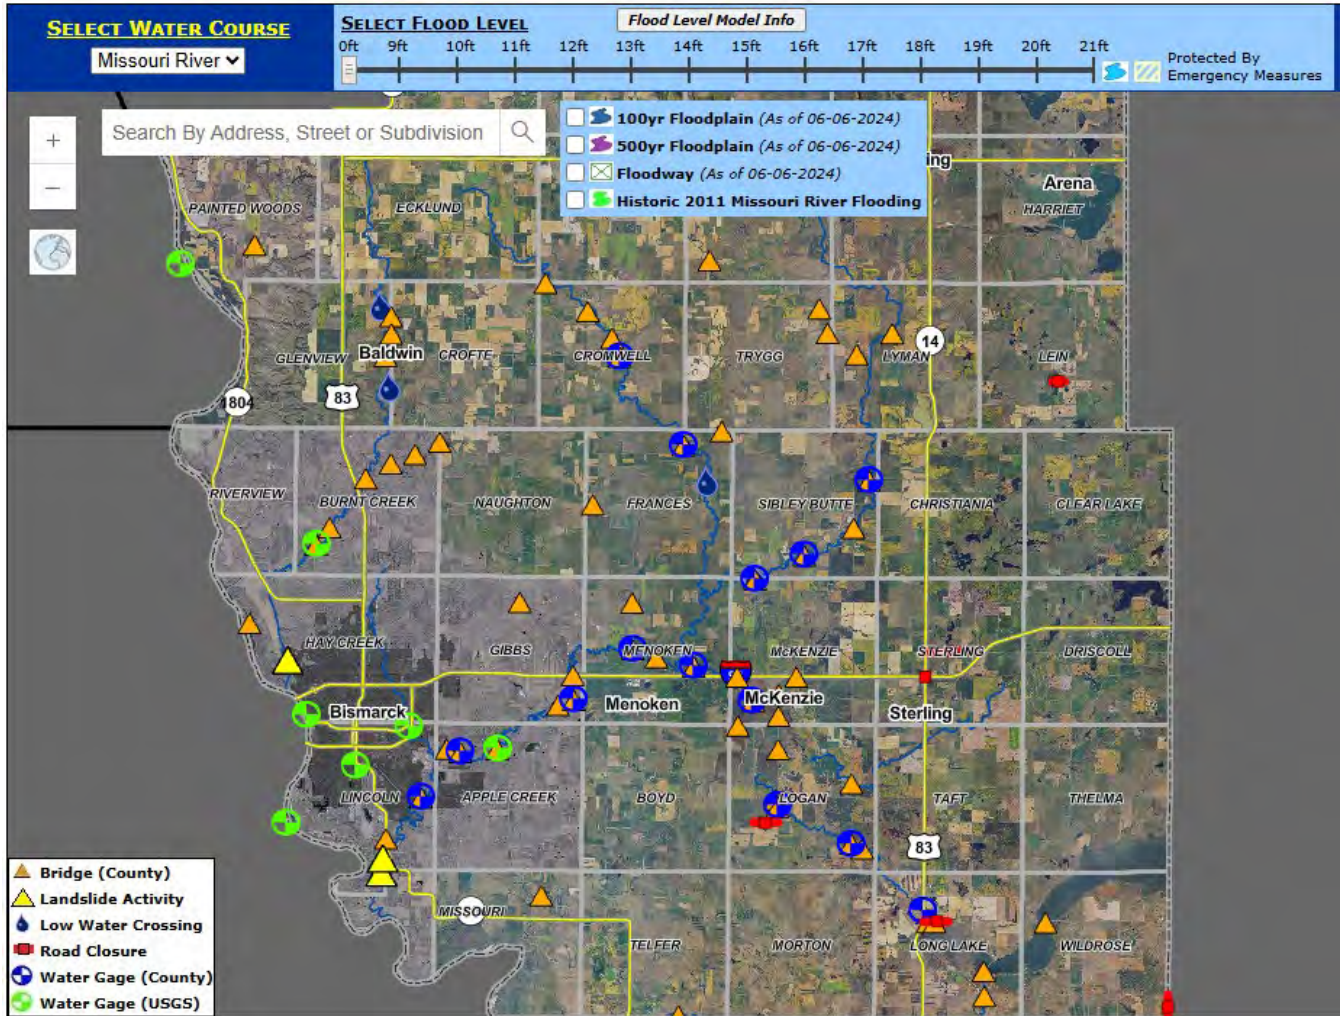

Mapping

Burleigh County maintains a Flood & Elevation Tool for Apple Creek and the Missouri River which is intended to assist residents with data related to their location. An address can be entered in the search box, and they can toggle among different flood levels. In addition to flood stage levels, the following are also displayed: elevations, floodplains, tax parcels, road closures and water gages. <https://www.burleighco.com/maps/apple-creek-flood-mapping/>

ND Risk Assessment Map Service (NDRAM)

NDRAM allows users to zoom in and visually display current flood risks, both approximate floodplains from BLE and effective regulatory floodplains from FEMA’s NFIP. This new tool also provides users with water surface elevations, flood depths, and the ability to download engineering model data and print customized maps making it useful for planning, mitigation, and disaster recovery actions.

Source: [NDRAM](#)

Identified Impacts

Short-duration, high-intensity spring rainstorms, in combination with snowmelt and ice jams, are a cause of flooding on the Missouri River and Burnt and Apple Creeks in Burleigh County. High-intensity summer rainstorms also cause minor flooding on Burnt and Apple Creeks.

Floodplains consist primarily of cropland and open rangeland with some brushy and wooded areas along the Missouri River bottoms. Some roads and residential and commercial facilities are in the Missouri River floodplain, particularly in the area south of the City of Bismarck.

Significant events include:

March 30, 2019 – Apple Creek crested at 16.37’ (Moderate Flood Stage is 16’) after a period of rapid thaw. Self-fill sandbag sites were established, and several roads were closed to include Apple Creek Road (between 80th St SE and 93rd St SE). Apple Valley Subdivision experienced water encroachment, and the Apple Creek Golf Course was inundated.

2011 - Since the construction of Garrison Dam, the 2011 flood event is the flood of record with a peak mean daily discharge of 154,000. This event occurred as a result of high mountain snow pack and a very significant and widely distributed system that brought extensive rain throughout eastern Montana. Prior to the 2011 event, the maximum peak discharge that has occurred since 1953 on the Missouri River was 68,900 cubic feet per second (cfs). This occurred on July 13, 1975. Prior to the 2011 event, the highest record of flooding at the Bismarck stream gage since the completion of Garrison Dam was 16.11 feet (1634.39 NGVD 29), which occurred in March of 2009, because of ice conditions and ice jams.

June 26, 2009 - One to three inches of rain fell over the Bismarck area in 45 minutes. The heaviest rainfall occurred across northern sections of the city. This resulted in widespread street flooding and overturned manhole covers. A few homes suffered water damage to basements. Property damage estimated at \$25K.

February 25, 2009 - An ice jam on the Missouri River at Bismarck, and recent melting snow, caused a drainage canal to back up and overflow into south Bismarck. This occurred in the vicinity of University Drive and Wachter Avenue, and for several blocks around there. Damage was mostly confined to a mobile home park, which was lower in elevation than the surrounding terrain. The homes were elevated within the park and so damage was minimal. Bismarck city crews took action that resulted in the flood waters receding. Property damage estimated at \$20K.

June 12, 2007 - Very heavy rain of 2.50 inches fell in 30 minutes time 7 miles south of Driscoll. A total of 4.50 inches of rain was measured 2 miles northeast of Driscoll. Water was reportedly standing everywhere and water covered roads including in the city of Driscoll. Several roads were washed out. Water was up to 4 inches deep in some homes basements in Driscoll. In the early afternoon of Tuesday June 12th, Tornado Watch 389 was issued in anticipation of severe thunderstorms developing during the afternoon hours. Several severe thunderstorm and tornado warnings were issued. One report of a severe thunderstorm wind gust and two confirmed tornado reports were received during the mid-afternoon hours. In addition, very heavy rain fell over large portions of central North Dakota, prompting several flash flood warnings during the late afternoon and early evening hours. Began 2 Miles North East of Driscoll and ended 7 Miles South West of Driscoll. Property damage estimated at \$250K, crop damage estimated at \$50K.

June 7, 2007 - Several county roads were closed due to water over them. Low lying areas north of Menoken were flooded with water standing in fields. Thunderstorms followed by showers and then areas of steady rain on June 6 and 7 resulted in flooding in parts of southern North Dakota. Five to six (5 to 6) inches of rain was common over the two day period, 10 Miles North of Menoken. Property damage estimated at \$50K, crop damage estimated at \$100K.

August 23, 2004 - Streets and underpasses flooded causing several major arteries to be closed. Water flowed across yards and into several basements of homes.

July 27, 2001 - Rainfall of 3 to 4 inches over Bismarck caused flooding of streets and underpasses. Many back roads near the Missouri River were water covered at times and a few washed out. Two mudslides on River Road covered the northbound lanes.

July 26, 2001 - Around 2 inches of rain fell in a very short time causing street flooding and pooling of water in Bismarck.

June 9, 2001 - Widespread street flooding throughout the City of Bismarck with a foot or more of water covered the roads. Travel not advised. Up to 12 feet of water accumulated in the railroad underpasses in town.

February 26, 2000 – Rapid snowmelt and heavy rain resulted in extensive runoff throughout Burleigh County. Unseasonably warm temperatures, as well as frozen grounds and ice and snow plugged culverts, also factored into the extensive runoff. Fifteen roadways were overtopped by runoff resulting in closure of these roads. Apple Creek near Menoken rose 10 feet from February 25th through the 27th weekend, cresting 16.6 feet. The flood stage is 15 feet. The flood warning remained in effect until March 1st, 2000 when levels fell below flood stage.

August 12, 1999 – Periods of heavy rainfall ranging from 4 to 7 inches saturated much of Morton and Burleigh counties. Hardest impact was felt in the cities of Bismarck and Mandan. Two hundred twenty one (221) homes and businesses received water damage. Twelve (12) road sites were damaged and a significant mudslide closed portions of Highway 1804 in north Bismarck.

March 20, 1999 – Flooding along Apple Creek near the City of Menoken in Burleigh County due to snowmelt and ice jams resulted in washed out roads and flooded fields. Many roads near the river were closed and barricaded. The flood stage on Apple Creek is 15 feet. The river crested at 16.2 feet on the evening of the 24th.

Source: National Oceanic and Atmospheric Administration National Climatic Data Center [Website](#) (01/1950 to 10/31/2019)

Special Flood Hazard Areas (SFHA) are land areas identified by FEMA that will be inundated by a flood event with a 1% chance of being equaled or exceeded in any given year. These areas, also called the 100-year floodplains, have high flood risk and are subject to mandatory flood insurance requirements for properties with federally backed mortgages. SFHAs are depicted on Flood Insurance Rate Maps (FIRMs) with designations typically including the letter "A" or "V". Portions of unincorporated Burleigh County, City of Bismarck, City of Lincoln, and the City of Wing include SFHAs.

Floodplain administrators follow the permitting ordinances outlined by the NFIP Guidance and [North Dakota Century Code 81-16.2 Floodplain Management](#). After an event, NFIP "substantial damage" is when the cost of repairing a damaged building is 50% or more of its market value before the damage. This determination is made by the floodplain administrator and triggers a requirement that the building be brought up to current floodplain management standards to be repaired or rebuilt.

Burleigh County encourages property owners to purchase flood insurance through the National Flood Insurance Program (NFIP).

Repetitive loss structure means a structure covered under an NFIP flood insurance policy that has incurred flood-related damage on two occasions, in which the cost of repair, on average, equaled or exceeded 25% of the value of the structure at the time of each such flood event; and at the time of the second incidence of flood-related damage, the contract for flood insurance contains increased cost of compliance coverage. ([44 CFR § 77.2\(i\)](#)) Burleigh County has 32 repetitive loss properties (25 are within the City of Bismarck). All properties are classified as single-family residences.

Severe repetitive loss structure means a structure that is covered under an NFIP flood insurance policy and has incurred flood-related damage for which four or more separate claims have been made under flood insurance coverage, with the amount of each claim (including building and contents payments) exceeding \$5,000 and with the cumulative amount of such claims payments exceeding \$20,000; or for which at least two separate flood insurance claims payments (building payments only) have been made, with cumulative amount of such claims exceeding the value of the insured structure. ([44 CFR § 77.2\(j\)](#)) There are no severe repetitive loss properties in Burleigh County.

May 30, 2024: Burleigh County Flood Ordinance changed to align with NFIP and City of Bismarck Flood Ordinances (Amendment 24-003 – Article 21 – FP – Floodplain) and updated date of Flood Insurance Study

April 4, 2024: City of Lincoln Ordinance 9-03-12 Floodplain District key changes include detailed definitions, administrative procedures, permit requirements, elevation standards, construction methods, accessory structure guidelines, and appeal/variance procedures. The overall effect is an increase in technical specificity, safety, and regulatory clarity for floodplain management within Lincoln.

Flood insurance is available to property owners whose jurisdiction participates in the NFIP.

Burleigh County continues to foster participation from the City of Regan. Additional NFIP strategies are listed in the Appendices.

Vulnerability is further addressed utilizing the Burleigh County Damage Estimator to determine estimate population, critical infrastructure, and structures impacted with assessed value for flood inundation.

Geologic Hazards

(Including erosion, expansive soils, landslides, radon, subsidence, earthquake)

Frequency	Nearly 100% probability in the next year
Severity	Negligible (Less than 10% of jurisdiction affected)
Risk Class	C
Seasonal Pattern	Spring and Summer
Duration	1 to 10 days
Speed of Onset	Hours to days
Location	Countywide (areas variable by sub-type)

Description

Erosion is the geological process of wearing away and transporting soil, rock, and sediment by natural forces—primarily water, wind, ice, and gravity.

Water related erosion can be exacerbated by periods of intense rainfall, rapid river rises, or overland flooding. Both wind and water erosion can increase during and after periods of drought or following wildland fire scarring, as natural vegetative cover is removed.

The exposure to Soil Erosion is countywide, but primarily driven by those locations where dirt is exposed to strong winds, hard rains, and flowing water. According to the Natural Resources Defense Council ([Mulvihill, 2021](#)), “Soil erosion occurs primarily when dirt is left exposed to strong winds, hard rains, and flowing water. In some cases, human activities, especially farming and land clearing, leave soil vulnerable to erosion. For example, when farmers till (plow) the soil before or after growing a season of crops, they may leave it exposed to the elements for weeks or months. The overgrazing of farm animals like cattle and sheep can also leave large areas of land devoid of ground-covering plants that would otherwise hold the soil in place.” According to the USGS ([2025](#)), recent wildfires can increase the risk of both wind and water erosion by removing groundcover, exposing fragile topsoil, and even changing the nature of the topsoil particles, making them more susceptible to erosion.

Soil Loss Tolerance tons/acres/year	Acres	% of County	Water Erosion Potential	Acres	Percent	Wind Erosion Potential	Acres	Percent
2	160,682	15.05%	Very low water erosion potential	437,448	40.97%	Not limited	676,740	63.38%
3	106,395	9.96%	Low water erosion potential	471,309	44.14%	Somewhat limited	98,177	9.19%
4	1,317	0.12%	Moderate water erosion potential	57,460	5.38%	Very limited	292,841	27.43%
5	766,237	71.76%	High water erosion potential	69,027	6.46%	Total for Burleigh County	1,067,758	100.00%
<Null>	33,127	3.10%	Very high water erosion potential	1,381	0.13%			
Total for Burleigh County	1,067,758	100.00%	Not rated	31,133	2.92%			
			Total for Burleigh County	1,067,758	100.00%

Expansive Soils

Expansive soils, primarily composed of expansive clay, are a notable geological factor in Burleigh County, particularly in areas like Bismarck. These soils undergo significant volume changes—swelling when wet and shrinking when dry—which can lead to structural damage if not properly managed.

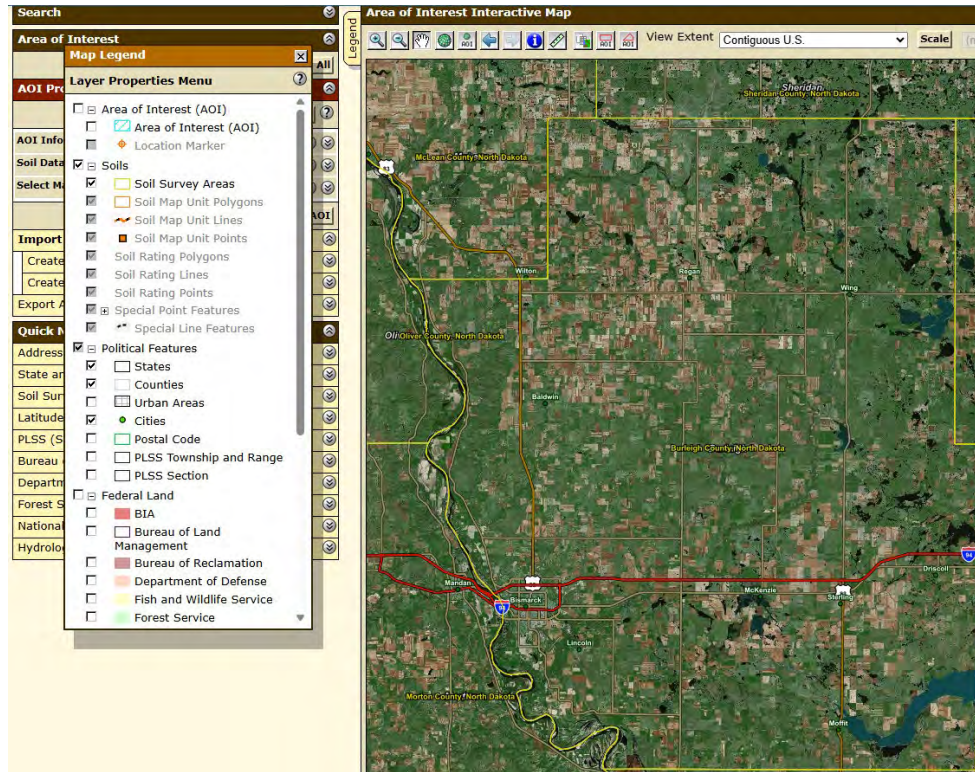

Through the end of this century in North Dakota, expect more frequent, larger, and more intense geologic hazards, such as landslides, riverbank collapse, sink holes, and expansive (clay) soils. Both Drought and Heavy Precipitation events are projected to occur more frequently, which is expected to contribute to an increased frequency of expansive soils alternately cracking and swelling, landslides where steep slopes are present, or to riverbank collapse where undercutting due to subsoil flow and/or antecedent flooding is possible. Both extremes also increase the potential for wind and water erosion. Increased development pressure and the impacts of future climate conditions may increase the risk to a variety of state infrastructure and assets if constructed or situated in areas prone to geologic hazards.

Burleigh County is in the glaciated Missouri Plateau Section, with the northeast corner of the state in the Missouri Coteau District and the remainder in the Coteau Slope District ([Kume and Hansen, 1965](#); [Stout, 1974](#)). According to Kume (1965), “The soils of Burleigh County are classified in the Chestnut soil group, a dark brown soil of the cool and temperate, subhumid to semiarid grasslands. The county can be divided into a southern and northwestern occurrence of dark brown soils separated by a northeastern, central western, and adjacent to Missouri River occurrence of the hilly and steep soils. The dark brown soils are loam and silt loam underlain by a light colored lime (alkali) accumulation. The hilly and steep soils on crests of hills and on steep slopes have a black or very dark brown surface layer but lack a subsoil, and the lime accumulation is very shallow.”

Expressed as a characteristic of the relative clay-mineral content in the soil. In engineering and agriculture applications this may be the [Shrink-Swell Class](#), a Linear Extensibility Percent (LE/LEP), or a Coefficient of Linear Extensibility (CL/COLE). Expansive/contractive soils can produce soil heaving/cracking during protracted wet/dry conditions. According to Wikipedia (Shrink-swell capacity, 2025), cracking soils can break critical plant root structure leading to crop failures. Bridges, roadbeds, building foundations, and pipelines can fail due to the heaving, settling, or cracking of soils.

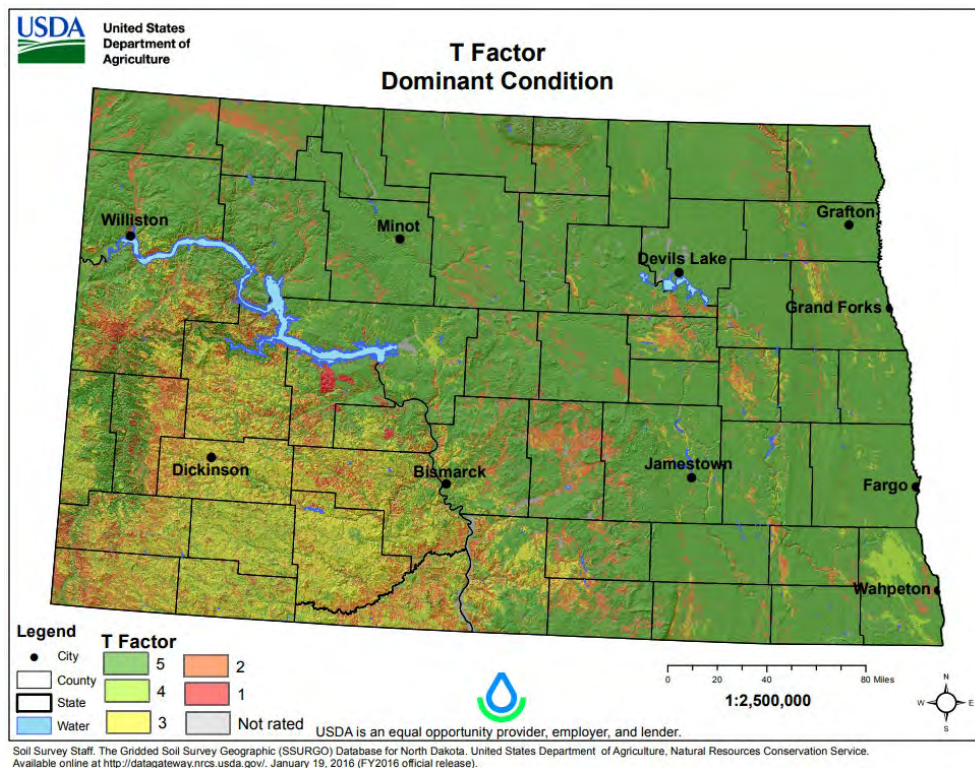

Shrink-Swell Class	LEP	COLE
Low	< 3.0	< 0.03
Moderate	3.0–5.9	0.03–0.06
High	6.0–8.9	0.06–0.09
Very High	≥ 9.0	≥ 0.09

Source: [NRCS/USDA National Soil Survey Handbook](#), Page 57

Source: [Web Soil Survey](#)

The T factor is an estimate of the maximum average annual rate of soil erosion by wind and/or water that can occur without affecting crop productivity over a sustained period. The rate is in tons per acre per year.

Source: [USDA](#)

Landslide

[United States Geological Survey](#) definition: “Landslides are the downslope movement of earth materials (rock, debris, and soil) at rates that range from inches per year to tens of miles per hour. Some landslides can move faster than a person can run. Landslides can happen with no notice or can take place over a period of days, weeks, or longer.”

Increasing Susceptibility

Areas without colored shading represent very low landslide potential

Source: [USGS ArcGIS](#)

Radon

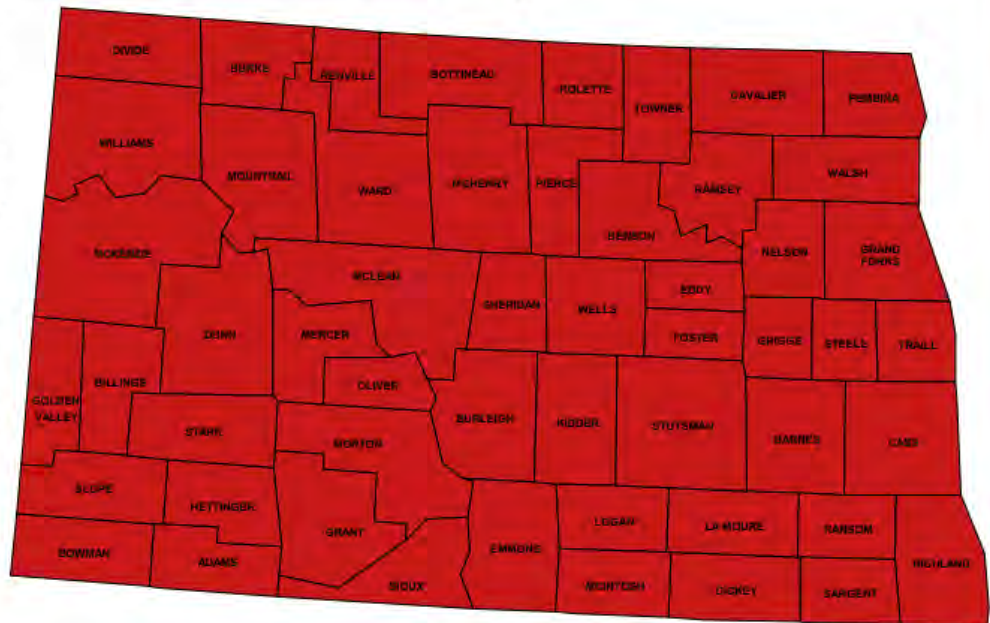

[United States Environmental Protection Agency](https://www.epa.gov/radon) defines radon: “Radon is a radioactive gas that forms naturally when uranium, thorium, or radium, which are radioactive metals break down in rocks, soil and groundwater. People can be exposed to radon primarily from breathing radon in air that comes through cracks and gaps in buildings and homes. Because radon comes naturally from the earth, people are always exposed to it.”

NORTH DAKOTA - EPA Map of Radon Zones

<https://www.epa.gov/radon/epa-map-radon-zones>

The Map of Radon Zones was developed in 1993 to identify areas of the U.S. with the potential for elevated indoor radon levels. The map is intended to help governments and other organizations target risk reduction activities and resources. The Map of Radon Zones should not be used to determine if individual homes need to be tested. No matter where you live, test your home for radon—it's easy and inexpensive. Fix your home if your radon level is 4 picocuries per liter (pCi/L) (150 becquerels per meter cubed (Bq/m³)) or higher. Consider fixing if your level is between 2 and 4 pCi/L (75 - 150 Bq/m³).

The Map of Radon Zones was developed using data on indoor radon measurements, geology, aerial radioactivity, soil parameters, and foundation types. The EPA recommends that this map be supplemented with any available local data to further understand and predict the radon potential for a specific area. **All homes should be tested, regardless of zone designation.**

What do the colors mean?

Zone	Zone 1 (red zones)	Zone 2 (orange zones)	Zone 3 (yellow zones)
Color			
Description	Highest potential Counties have a predicted average indoor screening level > (Greater than) 4 pCi/L (picocuries per liter) (150 Bq/m ³ becquerels per meter cubed))	Moderate potential Counties have a predicted average screening level ≥ (Greater than and equal to) 2 pCi/L (75 Bq/m ³) and ≤ (less than and equal to) 4 pCi/L (150 Bq/m ³)	Low potential Counties have a predicted average indoor screening level < (Less than) 2 pCi/L (75 Bq/m ³)

IMPORTANT: Consult the publication entitled "Preliminary Geologic Radon Potential Assessment of North Dakota" (USGS Open-file Report 93-292-H) before using this map. See <https://doi.org/10.3133/ofr93292H>. This document contains information on radon potential variations within counties. The EPA also recommends that this map be supplemented with any available local data in order to further understand and predict the radon potential of a specific area.

Subsidence

Subsidence is the sinking or settling of the ground surface, caused by the compaction of underground materials due to natural processes or human activity like groundwater extraction, mining, and soil consolidation. It causes significant structural damage to infrastructure—including cracked walls, uneven floors, and broken pipelines—often requiring costly, specialized repairs.

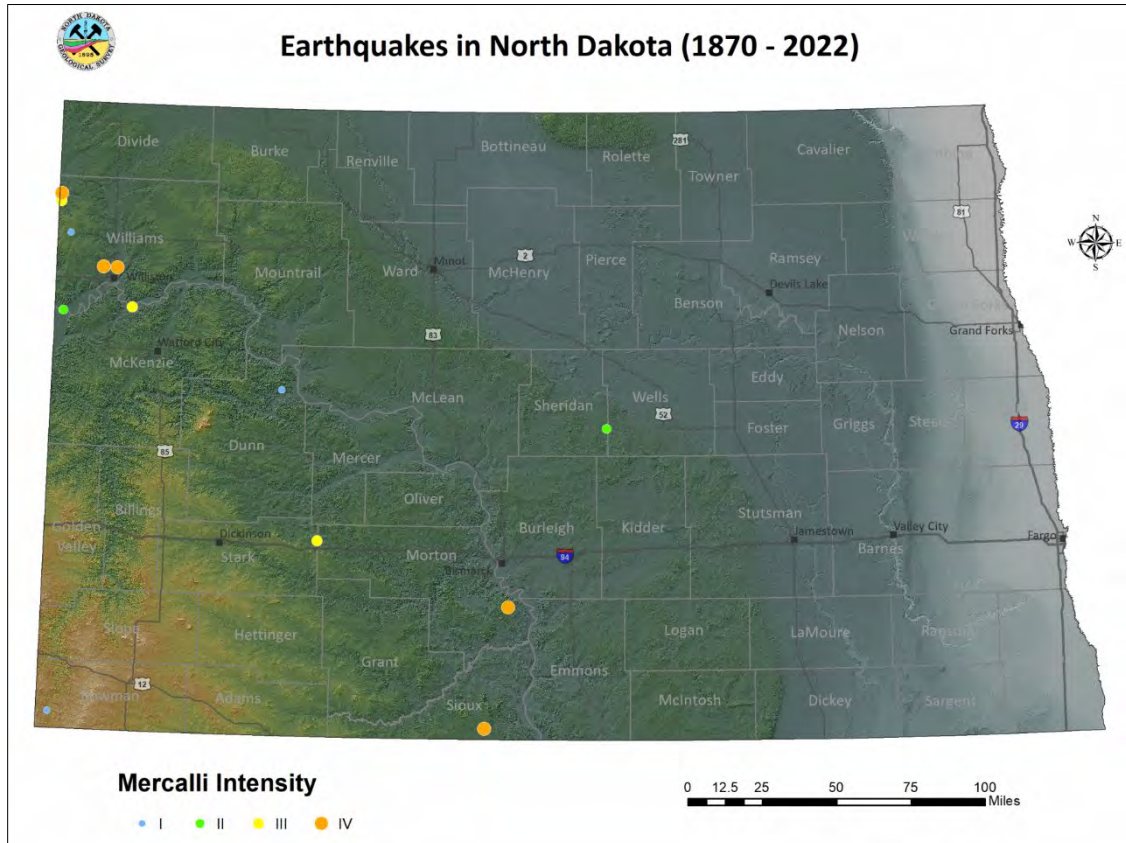

There are 34 abandoned coal mines in Burleigh County which are managed by the North Dakota Public Service Commission's Abandoned Mine Lands Division to eliminate dangers such as subsidence. Abandoned underground lignite mines can cause sinkholes and subsidence, rendering land unusable.

Source: [ND Public Service Commission](#)

Earthquake

There is no record of earthquakes in Burleigh County; however, the [ND Department of Mineral Resources](#) provides information on an earthquake in Morton County on July 8, 1968 that was felt in various areas of Burleigh County.

July 8, 1968 M 4.4 Earthquake near Huff, North Dakota

A magnitude M 4.4 earthquake was recorded five miles southwest of Huff in eastern Morton County in south-central North Dakota during the morning of Monday, July 8, 1968 at an estimated depth of 20.5 miles. This earthquake was the first instrumentally verified earthquake recorded in North Dakota and was reported to have been felt over approximately 3,000 square miles of south-central North Dakota. It was reported that “a television set shifted and sounds like thunder were heard.” Additionally, Mercalli earthquake intensity IV effects were noted at Bismarck, Fort Rice, Huff, Linton, Mandan, Menoken, and Moffit; and Mercalli intensity I-III effects at Almont, Flasher, Halliday, and St. Anthony (Coffman and Cloud, 1970).

Day	Date	Time (local)	Time (UTC)	Magnitude	Depth (miles)	MMI	T & R	Longitude	Latitude
Monday	07/08/1968	10:50:12	16:50:12	4.4	20.5	IV	136-80	-100.74	46.59

Source: [ND Earthquake Catalog \(1870 – 2015\)](#)

Modified Mercalli Intensity Scale

By [Earthquake Hazards Program](#)

Intensity	Shaking	Description/Damage
I	Not felt	Not felt except by a very few under especially favorable conditions.
II	Weak	Felt only by a few persons at rest, especially on upper floors of buildings.
III	Weak	Felt quite noticeably by persons indoors, especially on upper floors of buildings. Many people do not recognize it as an earthquake. Standing motor cars may rock slightly. Vibrations similar to the passing of a truck. Duration estimated.
IV	Light	Felt indoors by many, outdoors by few during the day. At night, some awakened. Dishes, windows, doors disturbed; walls make cracking sound. Sensation like heavy truck striking building. Standing motor cars rocked noticeably.
V	Moderate	Felt by nearly everyone; many awakened. Some dishes, windows broken. Unstable objects overturned. Pendulum clocks may stop.
VI	Strong	Felt by all, many frightened. Some heavy furniture moved; a few instances of fallen plaster. Damage slight.
VII	Very strong	Damage negligible in buildings of good design and construction; slight to moderate in well-built ordinary structures; considerable damage in poorly built or badly designed structures; some chimneys broken.
VIII	Severe	Damage slight in specially designed structures; considerable damage in ordinary substantial buildings with partial collapse. Damage great in poorly built structures. Fall of chimneys, factory stacks, columns, monuments, walls. Heavy furniture overturned.
IX	Violent	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb. Damage great in substantial buildings, with partial collapse. Buildings shifted off foundations.
X	Extreme	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations. Rails bent.

Identified Impacts

- Blocked Roads
- Building Collapse
- Business Interruptions
- Delayed Emergency Response
- Downed Power Lines
- Downed Trees
- Evacuation (Localized)
- Loss of Potable Water
- Loss of Power
- Property Damage

History

March 4, 2020: River Road closed between Wilderness Cove Road and Sandy River Drive due to debris and material on the roadway. Opened the next day.

December 22, 2019, to present: River Road closed between Burnt Boat Road and Sandy River Drive due to a landslide. Debris removed and road re-opened on December 30, 2019. The area continues to be monitored for movement.

2018 to present: The University of Mary campus sits upon a bluff and has experienced slumping and continues phases of bank stabilization through a series of mitigation grants.

The southern portion of Apple Creek has experienced some bank failures and slumping. The area above this portion of Apple Creek is home to the University of Mary Campus.

2011 – Double Ditch is an earth lodge village that was home to thousands of Mandan people from 1490-1785. It has been owned by the State of ND since 1936 and began seriously eroding after the 2011 floods which caused the land to slump, crack, and erode at the site north of Bismarck (off of Hwy 1804) and exposed remains of 18 ancient inhabitants. The ND Legislature appropriated \$3.5 million to stabilize the site, and pilons (some as deep as 95') were erected within the banks of the Missouri to hold up the village. The ND Historical Society monitors Double Ditch with a drone for biannual inspections.

Source: Forum News Service

July 27, 2001 - Rainfall of 3-4" inches over Bismarck caused flooding of streets and underpasses. Many back roads near the Missouri River were water covered at times and a few washed out. Two mudslides on River Road covered the northbound lanes.

August 12, 1999 – Heavy rainfall ranging from 4-7" saturated much of Burleigh County causing a significant mudslide which closed portions of Highway 1804 in north Bismarck.

(Page intentionally left blank)

Hazardous Materials Release

Frequency	Highly Likely (Nearly 100% probability in the next year)
Severity	Limited (10-25% of jurisdiction affected)
Risk Class	B
Seasonal Pattern	None
Duration	Hours/Days
Speed of Onset	No warning
Location	Countywide

Description

Hazardous materials are any substances in any quantity or form which may pose an unreasonable risk to the safety, health, environment, and property of citizens. The term “hazardous materials” covers a wide array of products, from relatively innocuous ones such as hair spray in aerosol dispensers and wash preservatives such as creosote to highly toxic or poisonous materials such as anhydrous ammonia and phosgene gas. The potential severity of hazards of these materials is varied, but the primary reason for their designation is their risk to public safety. Tier II forms are available for viewing at the Burleigh County Emergency Management office.

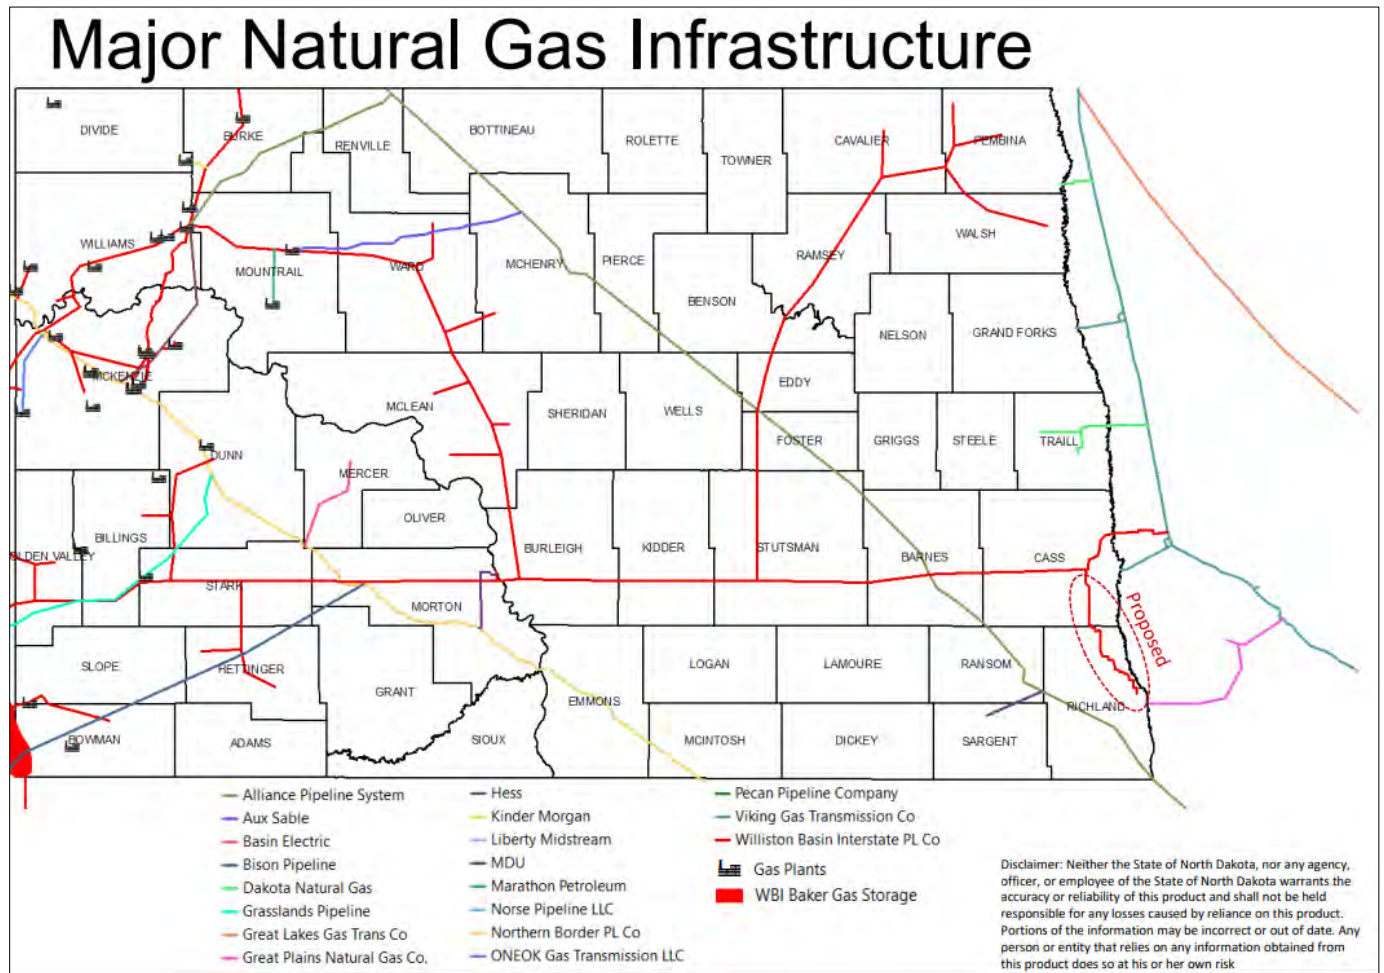

The County is exposed to and is at risk from accidents and/or incidents involving hazardous materials. The economy is based upon agriculture, manufacturing, and industry. All of these rely on the production, use, storage, transportation, etc. of hazardous materials. Explosives, flammable liquids, flammable solids, gases, poisons, pesticides, oxidizing substances, miscellaneous dangerous substances, and radioactive materials are either used in or transported through Burleigh County.

Hazardous materials are transported via three modes into and within Burleigh County:

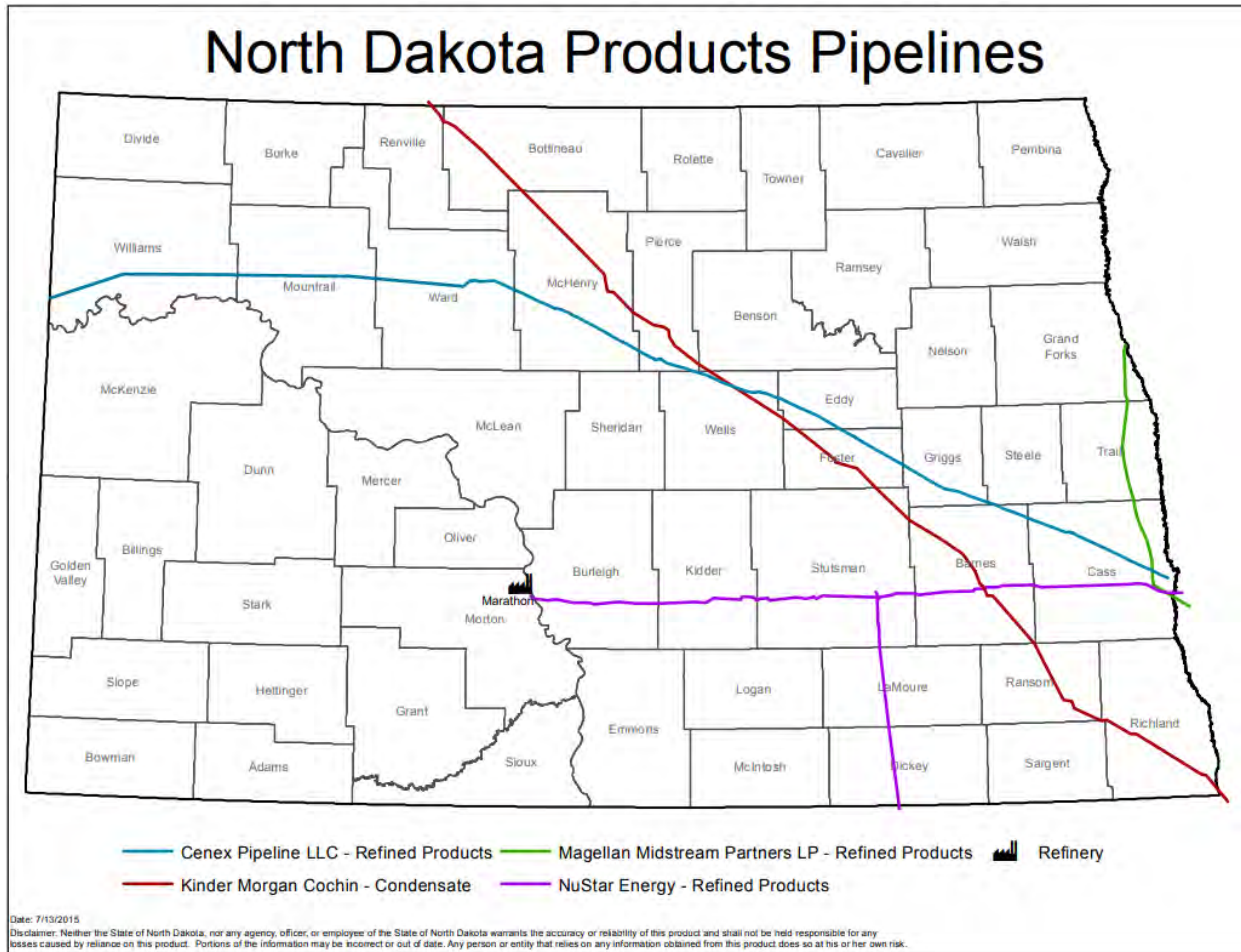

- Highways: I-94 and ND 36 run east-west through the county. US-83, ND 1804, ND 41, and ND 14 run north-south through the county. (Attachment 3: Major Roadways in Burleigh County)
- Rail: BNSF owns/operates all railways in the county.
- Air: The Bismarck Airport is the only airport in the area with significant air hazardous material transportation activity.

Identified Impacts

- Blocked Roads
- Building Collapse
- Business Interruptions
- Delayed Emergency Response
- Downed Power Lines
- Downed Trees
- Evacuation (Full)
- Evacuation (Localized)
- Explosion
- HAZMAT Release
- Increased Fire Potential
- Increased Public Safety Runs
- Livestock Injury/Death
- Loss of Economy
- Loss/Overcrowded Medical Facilities
- Loss of Potable Water
- Loss of Power

Infectious Disease and Pest Infestation
(Including human, animal, and plant diseases)

Frequency	Likely (10-100% probability in the next year, or at least 1 chance in next 10 years)
Severity	Critical (25-50% of jurisdiction affected)
Risk Class	B
Seasonal Pattern	None
Duration	Hours/Days
Speed of Onset	No warning
Location	Countywide

Description

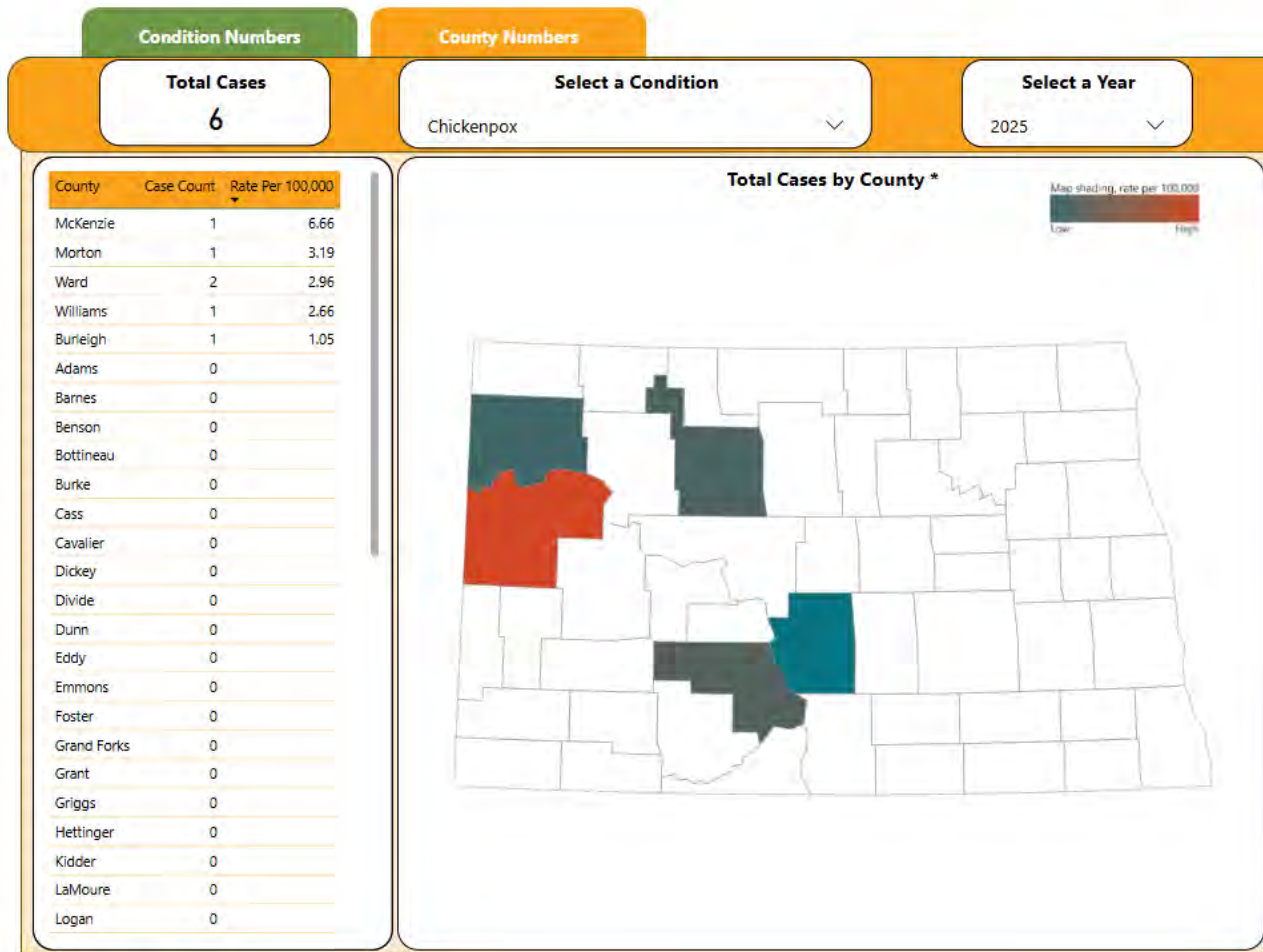

Naturally occurring biological diseases in humans as well as those biological agents found in the environment, or diagnosed in animals, that have the potential for transmission to humans.

The probability of communicable disease in Burleigh County presents challenges due to a limited history of outbreaks. Medical advances over the past 50 years prevent many disease outbreaks, yet the potential remains. Burleigh County is primarily a rural setting and somewhat isolated from the rapid spread of global diseases, however, international and domestic travel is so common that, like the Spanish Influenza Pandemic of 1918, North Dakotans would most likely be affected at some point. Urban areas could see rapid spread of such diseases through their populations.

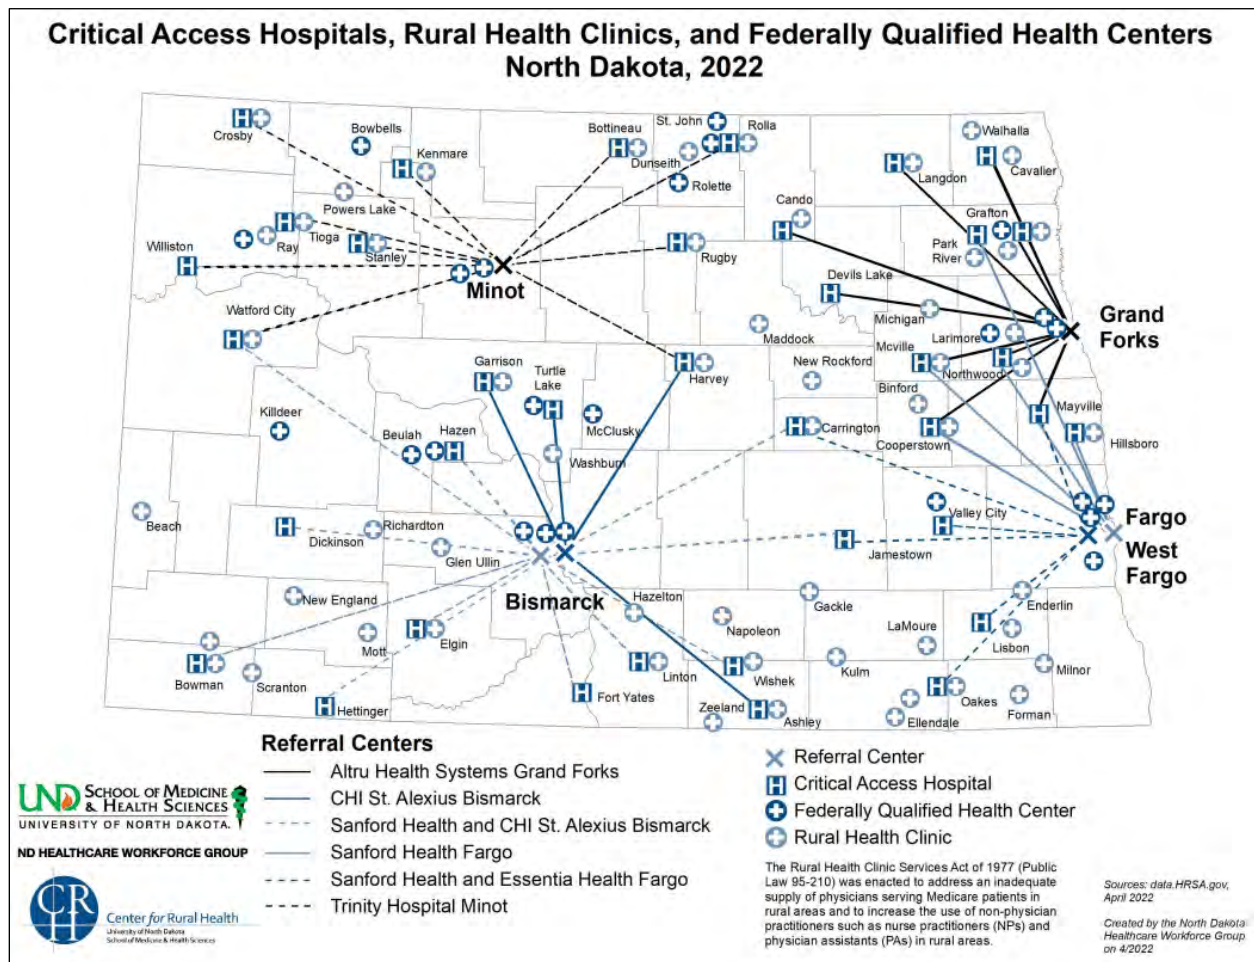

Identified Impacts

- Business Interruptions
- Delayed Emergency Response
- Increased Public Safety Runs
- Livestock Injury/Death
- Loss of Economy
- Loss/Overcrowded Medical Facilities
- Loss of Potable Water
- Mass Casualties
- School Closure

The ND Department of Health and Human Services maintains a listing of “[Diseases, Conditions and Immunization](#)” as well as “[Disease Report Dashboard](#)”.

ND is primarily rural with access to networked medical care:

History

Burleigh County has experienced one pandemic (COVID-19 in 2020) in recent years, and seasonal influenza outbreaks occur annually—both are tracked by the ND Department of Health and Human Services.

2024-2025 Respiratory Pathogen Weekly Report
 North Dakota Department of Health and Human Services
 Ending Saturday, April 19, 2025
 Last updated: 4/23/2025

Week 16

Combined

Influenza **RSV** **COVID-19**

Influenza, and RSV cases continue to drop from the previous week as COVID-19 cases slightly increase from the previous week. Other markers of activity (such as the percentage of visits for outpatient respiratory illness) remain low.

Vaccines are our best defense against serious illness from viruses like influenza, COVID-19, and RSV. For more information on immunizations, please visit our immunization page here.

	Last Week	Season Total
Cases of Influenza :	10	1,506
Cases of RSV :	9	322
Cases of COVID-19 :	7	1,360
Outpatient Visits for Respiratory Illness:	3.41%	4.46%

Source: [ND Department of Health and Human Services](#)

North Dakota has had three influenza pandemics in the 20th century: 1918 caused 5,100 deaths in North Dakota, 500,000 deaths in the United States; 1957 resulted in 70,000 deaths in the United States; and 1968 resulted in 34,000 deaths in the United States.

Burleigh County COVID-19 data:

Source: [USA Facts](#)

Spanish Influenza Pandemic of 1918

The magnitude of a communicable disease outbreak varies from everyday disease occurrences to widespread infection. During the 1918 Influenza Pandemic, infection rates approached 28% in the United States. (Billings, 1997). Other pandemics produced infections rates as high as 35% of the total population. (World Health Organization, 2007). Such a pandemic affecting North Dakota represents a severe magnitude event. Almost any highly contagious, incapacitating disease that enters the North Dakota population would quickly overwhelm local and state health resources. Similarly, any rapidly spreading bioterrorism event for which little vaccination or containment capability exists is a high magnitude event.

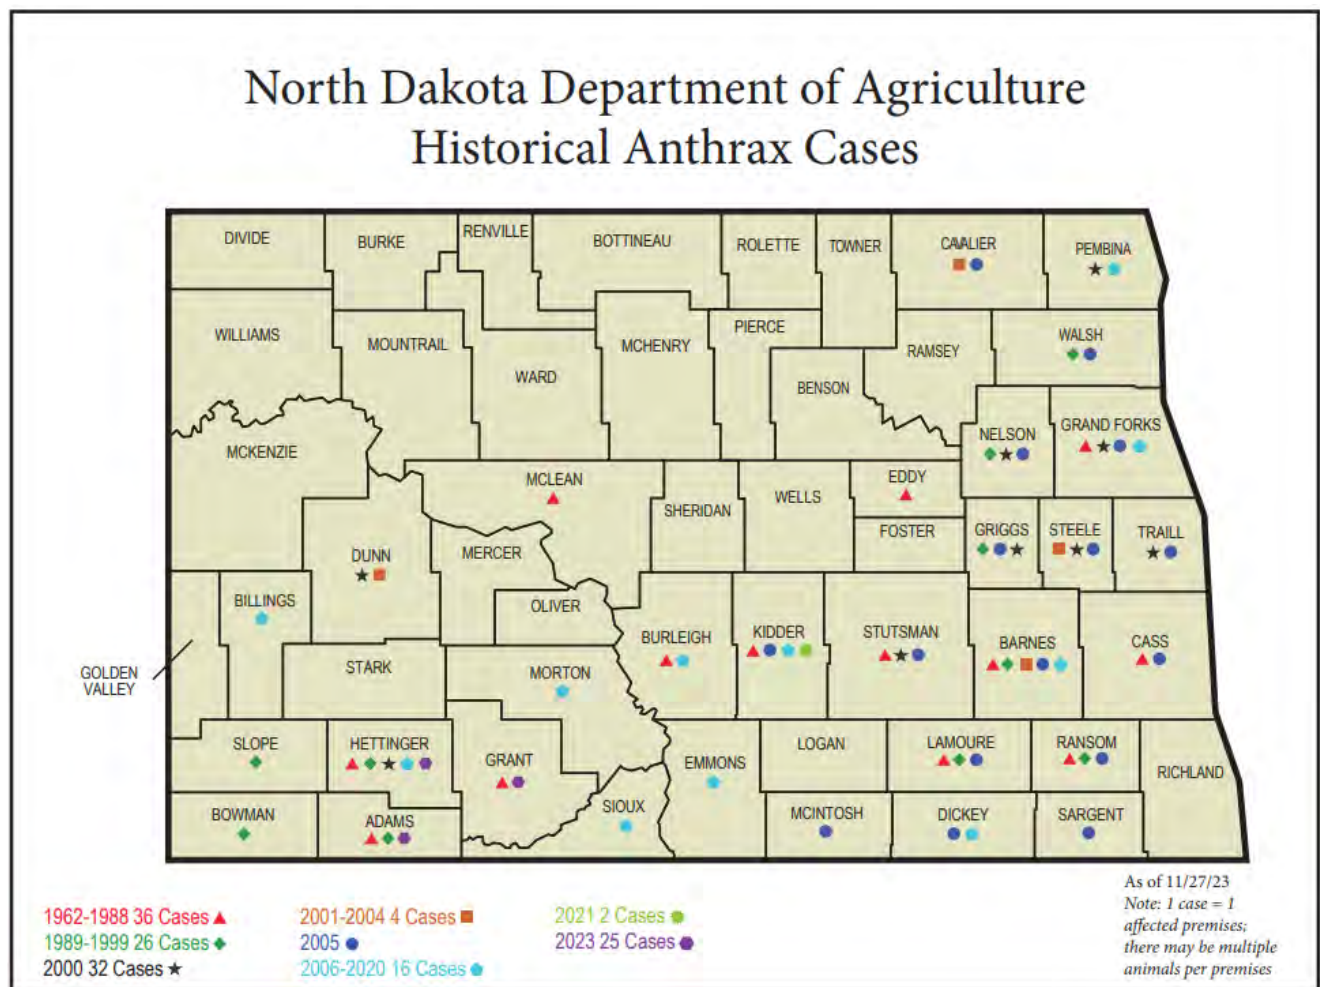

Agricultural Diseases, Noxious Weeds, and Pests

A comprehensive disease list ([reportable disease, related pests diseases or noxious weeds, disease](#)) maintained by the ND Department of Agriculture.

Anthrax

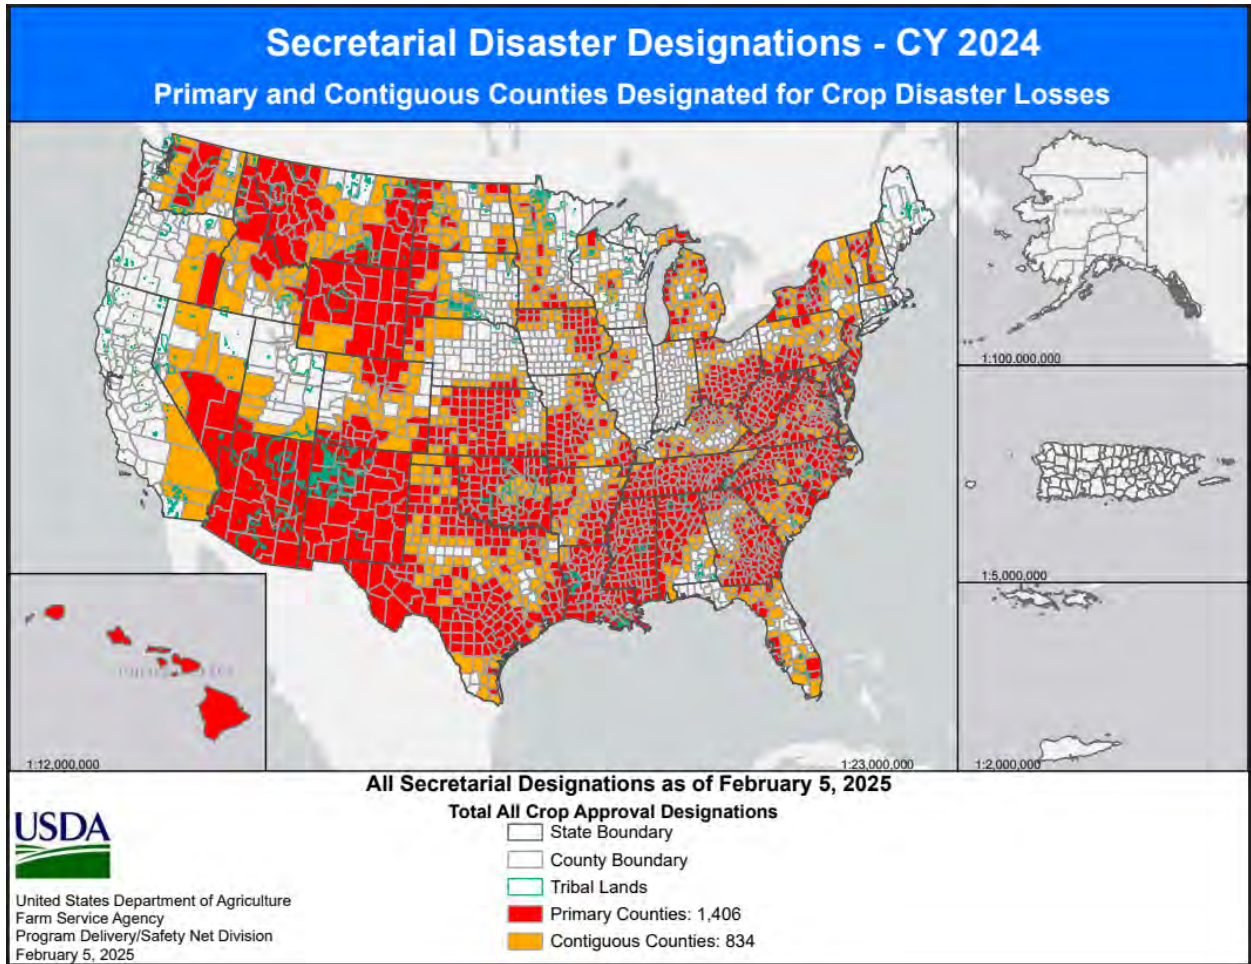

“Anthrax occurs worldwide and is associated with sudden death of cattle and sheep. Anthrax can infect all warm-blooded animals, including humans. The bacteria that causes anthrax (*Bacillus anthracis*) can form spores which are resistant to heat, cold, chemical disinfectants and drying. The anthrax spore may live indefinitely in the soil of a contaminated pasture or yard. Anthrax is more commonly seen in areas after periods of extended dryness or excessive rain. People may develop cutaneous anthrax after exposure to infected animals and animal products including hides, hair, and wool and may develop a more serious form of anthrax after eating contaminated undercooked meat or by inhaling the spores during a necropsy or disposal of opened carcasses. A vaccine is available for cattle and recommended for use annually in areas of historically high infection rates or when environmental factors increase the risk of anthrax in a new area.” (Source: [ND Department of Agriculture](#))

Burleigh County has a low case history:

Source: [ND Department of Agriculture](#)

Agriculture-related disasters and disaster designations are quite common. Disaster designation information and fact sheets are provided by the United States Department of Agriculture.

Severe Summer Weather

(Including downbursts, extreme heat, hail, lightning, high wind, and tornado)

Frequency	Highly Likely (Nearly 100% probability in the next year)
Severity	Limited (10-25% of jurisdiction affected)
Risk Class	B
Seasonal Pattern	April to November
Duration	2 to 5 hours
Speed of Onset	Little to no warning
Location	Countywide

Description

Severe summer storms are generated by temperature imbalances in the atmosphere, and as warm, moist air rises, the thunderstorm develops. These conditions will produce updrafts and downdrafts which are the reason for gust fronts, heavy rain (flash flooding), lightning, hail, and high winds. Downburst or straight-line winds can be as deadly as tornadoes. If the thunderstorm continues to intensify, a tornado may develop.

Extreme Heat: Period of abnormally hot and dangerous temperatures—often with high humidity—that can cause significant negative impacts on people, animals, and infrastructure. Generally characterized by heat index values reaching 105°F to 110°F or higher, typically lasting for at least two days, often with nighttime temperatures not dropping below 75 F.

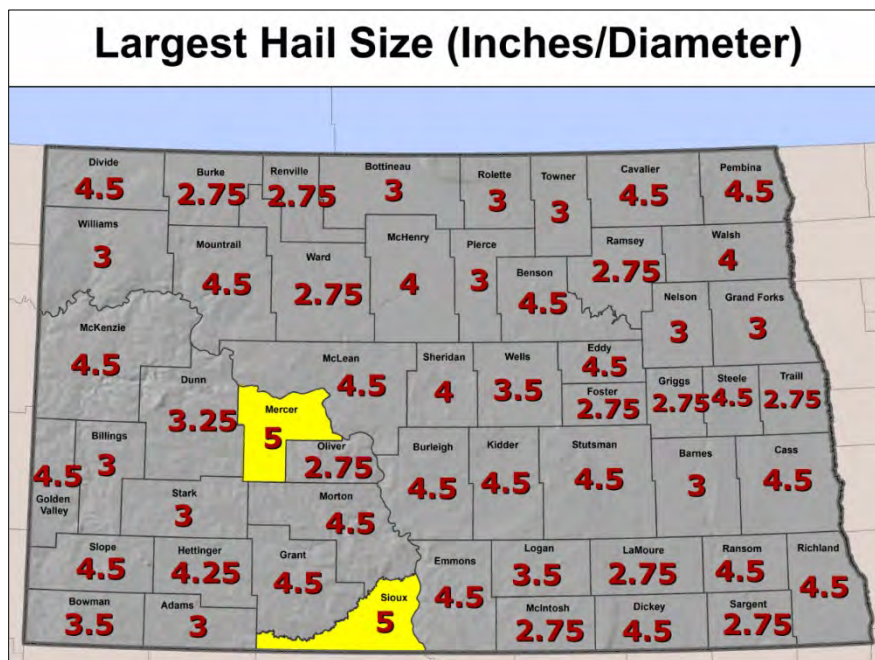

Lightning:

- Causes an average of 55-60 fatalities and 400 injuries each year
- Occurs with all thunderstorms
- Costs more than \$1 billion in insured losses each year

High Winds:

- Pressure gradient, non-thunderstorm winds which occur both in summer-season (May-Oct) and winter-season (Nov-Apr).
- High Winds are sustained winds at GTE 40 mph or occasional winds gusts GTE 58 mph, without thunderstorms present.

Hail: Hail is larger than sleet and forms only in thunderstorms. Hail stones can range from pea size to the size of a grapefruit. Hail has the potential to be life-threatening due to falling from great heights; large hailstones can fall at speeds faster than 100 mph! The major hazard is to crops, aircraft, automobiles, roofs, and windows, etc. The destructiveness of hailstorms is not due to the hailstones alone. Hail damage is difficult to determine, as hail, wind, and rain frequently occur at the same time.

Hail Size Description Chart		
Hailstone size	Measurement	
	in.	cm.
bb	< 1/4	< 0.64
pea	1/4	0.64
dime	7/10	1.8
penny	3/4	1.9
nickel	7/8	2.2
quarter	1	2.5
half dollar	1 1/4	3.2
golf ball	1 3/4	4.4
billiard ball	2 1/8	5.4
tennis ball	2 1/2	6.4
baseball	2 3/4	7.0
softball	3.8	9.7
Compact disc / DVD	4 3/4	12.1

Note: Hail size refers to the **diameter** of the hailstone.

Source: [National Weather Service](#)

Thunderstorm Winds:

Thunderstorm Winds are all considered downburst wind gusts (3-second gusts GTE 58 mph), and are distinguished by the size of the outflow, as microburst (smaller than 2.5 mi diameter) or macroburst (larger than 2.5 mi diameter). Much larger footprint downburst winds can result from thunderstorm Squall-lines, up to and including Derecho-scale winds. Such large scale thunderstorm winds are often referred to as straight-line winds, to distinguish them from the smaller-scale tornadoes cyclonic winds.

Straight-line Winds:

- Any thunderstorm wind that is not associated with rotation, and is used mainly to differentiate from tornadic winds
- Can exceed 125 mph
- Can cause destruction equal to a tornado
- Are extremely dangerous to aviation

Downburst:

- A strong, localized downdraft from a thunderstorm that produces damaging "straight-line" winds upon hitting the ground.
- Winds can exceed 150 mph, causing damage similar to tornadoes.
- Classified as microbursts (smaller than 2.5 miles) or macrobursts (larger than 2.5 miles).

Beaufort Wind Chart – Estimating Winds Speeds

Beaufort Number	MPH		Terminology	Description
	Range	Average		
0	0	0	Calm	Calm. Smoke rises vertically.
1	1-3	2	Light air	Wind motion visible in smoke.
2	4-7	6	Light breeze	Wind felt on exposed skin. Leaves rustle.
3	8-12	11	Gentle breeze	Leaves and smaller twigs in constant motion.
4	13-18	15	Moderate breeze	Dust and loose paper is raised. Small branches begin to move.
5	19-24	22	Fresh breeze	Smaller trees sway.
6	25-31	27	Strong breeze	Large branches in motion. Whistling heard in overhead wires. Umbrella use becomes difficult.
7	32-38	35	Near gale	Whole trees in motion. Some difficulty when walking into the wind.
8	39-46	42	Gale	Twigs broken from trees. Cars veer on road.
9	47-54	50	Severe gale	Light structure damage.
10	55-63	60	Storm	Trees uprooted. Considerable structural damage.
11	64-73	70	Violent storm	Widespread structural damage.
12	74-95	90	Hurricane	Considerable and widespread damage to structures.

Source: [National Weather Service](#)

Thunderstorm Damage Threat (tag category)	Wind	Hail diameter
Base (no tag; default)	58 mph (60 mph will appear in the warning)	1.00 inch (U.S. quarter)
Considerable	70 mph	1.75 inch (golfball)
Destructive	80 mph	2.75 inch (baseball)

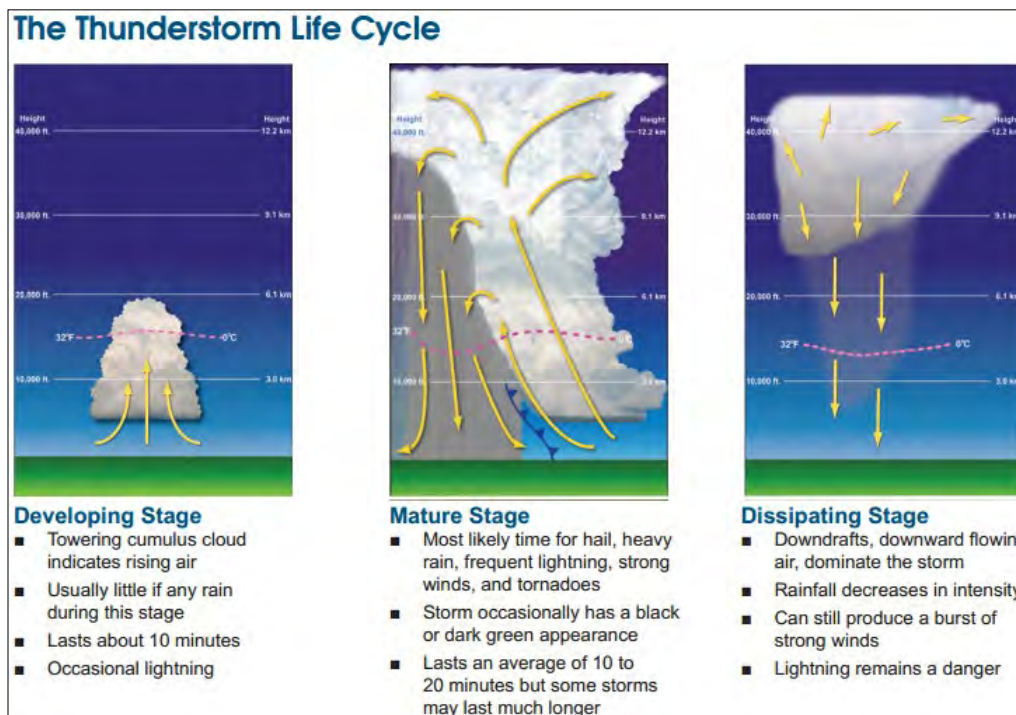

Source: [National Weather Service](#)

Thunderstorm Probability and Related Lightning Activity Level (LAL)

Thunderstorm Probability	Thunderstorm Category	Rain Intensity	LAL	Lightning Characteristics (CG: Cloud-to-Ground)
None	None	Variable	1	None
10%	Isolated	Light Rain occasionally reaching the ground	2	1 to 5 CG lightning strikes in 5-minute period
20%	Widely Scattered	Light to moderate rain reaching the ground	3	6 to 10 CG lightning strikes in a 5-minute period
30-50%	Scattered	Moderate rain is common	4	Frequent, 11 to 15 CG strikes in 5-minute period
60-70%	Numerous	Moderate to heavy rainfall	5	Frequent and intense, 15+ CG strikes in 5-minute period
20% (Dry)	Dry Lightning	Little to no rain	6	Like LAL 3 but without rain, w/higher wildland fire threat

Source: Compiled from National Weather Service Glossary, 2023

Straight-line winds are any winds not associated with the rotation of a tornado and are responsible for most thunderstorm damage. The winds can exceed 125 mph! A downburst is a small area of rapidly descending air beneath a thunderstorm and can cause damage equivalent to a strong tornado and can be extremely hazardous to aviation. The number one cause of wind damage in North Dakota is from downburst winds, not tornadoes.

Source: [Thunderstorms, Tornadoes, Lightning](#), A Preparedness Guide, US Department of Commerce, National Oceanic and Atmospheric Administration, National Weather Service

Tornadoes:

- A rotating column of air, in contact with the ground and pendant (attached) to the base of a thunderstorm.
- Cause an average of 60-65 fatalities and 1,500 injuries each year
- Can produce wind speeds in excess of 200 mph
- Can be 1 mile wide and stay on the ground over 50 miles

A thunderstorm affects a relatively small area when compared to a winter storm. The typical thunderstorm is 15 miles in diameter and lasts an average of 30 minutes. Despite their small size, all thunderstorms are dangerous! Every thunderstorm needs:

- Moisture—to form clouds and rain
- Unstable air—warm air that can rise rapidly
- Lift—caused by cold or warm fronts, sea breezes, mountains, or the sun’s heat.

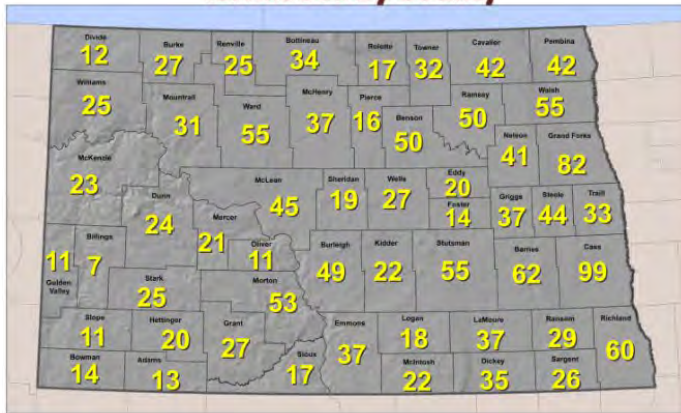

The Enhanced Fujita Scale (EF Scale)

EF SCALE	
EF Rating	3 Second Gust (mph)
0	65-85
1	86-110
2	111-135
3	136-165
4	166-200
5	Over 200

Identified Impacts

- Blocked Roads
- Building Collapse
- Business Interruptions
- Delayed Emergency Response
- Downed Power Lines
- Downed Trees
- Evacuation (Localized)
- Explosion
- Flooding (Street)
- Flooding (Structure)
- HAZMAT Release
- Increased Fire Potential
- Increased Public Safety Runs
- Livestock Injury/Death
- Loss of Economy
- Loss/Overcrowded Medical Facilities
- Loss of Potable Water
- Loss of Power
- Mass Casualties
- Property Damage
- School Closure
- Sewer Backup

Source: [National Oceanic and Atmospheric Administration National Climatic Data Center](#) (01/1950 to 12/2024)

Severe Winter Weather
(Including blizzards, extreme cold, heavy snow, ice storms)

Frequency	Highly Likely (Nearly 100% probability in the next year)
Severity	Critical (25-50% of jurisdiction affected)
Risk Class	A
Seasonal Pattern	November to April
Duration	2 to 5 days
Speed of Onset	12 to 24 hours warning
Location	Countywide

Description

Winter storms occur in many forms and vary significantly in size, strength, intensity, duration, and impact. The winter season can begin as early as September and last into May. Generally, a period from mid-November through early April provides the bulk of winter storms.

Heavy snow can paralyze a community by stranding travelers, stopping the flow commodities, and disrupting emergency services. The weight of snow can cause roofs to collapse and knock down trees and utility lines. Homes and farms may be isolated for days, and unprotected livestock may die. The cost of snow removal, damage repair, and loss of business can have economic impacts on communities.

Blizzard: A storm which contains large amounts of snow OR blowing snow, with winds in excess of 35 mph and visibilities of less than 1/4 mile for an extended period of time (at least 3 hours) as defined by the [National Weather Service](#).

Extreme Cold: Dangerously low temperatures and wind chills capable of causing frostbite and hypothermia (ND Criteria for Extreme Cold is “An apparent temperature of -40F, based on the combination of actual air temp and/or wind chill”).

Heavy Snow: Snowfall of 6” or more in 12 hours or 8” or more in 24 hours.

Ice Storm: A winter event with significant accumulations of ice (typically 1/4” or more).

Winter Storm: A hazardous, life-threatening event featuring significant snow, sleet, or freezing rain, often accompanied by strong winds and low temperatures.

Snow Squall: A brief, intense burst of heavy snow and strong, gusty winds that causes quick, significant reductions in visibility (whiteout conditions), rapidly falling temperatures, and sudden flash freezes on roads.

High Wind: Sustained winds reach or exceed 40 mph for at least one hour, or when instantaneous gusts reach 58 mph or higher for any duration.

Beaufort Wind Chart – Estimating Winds Speeds

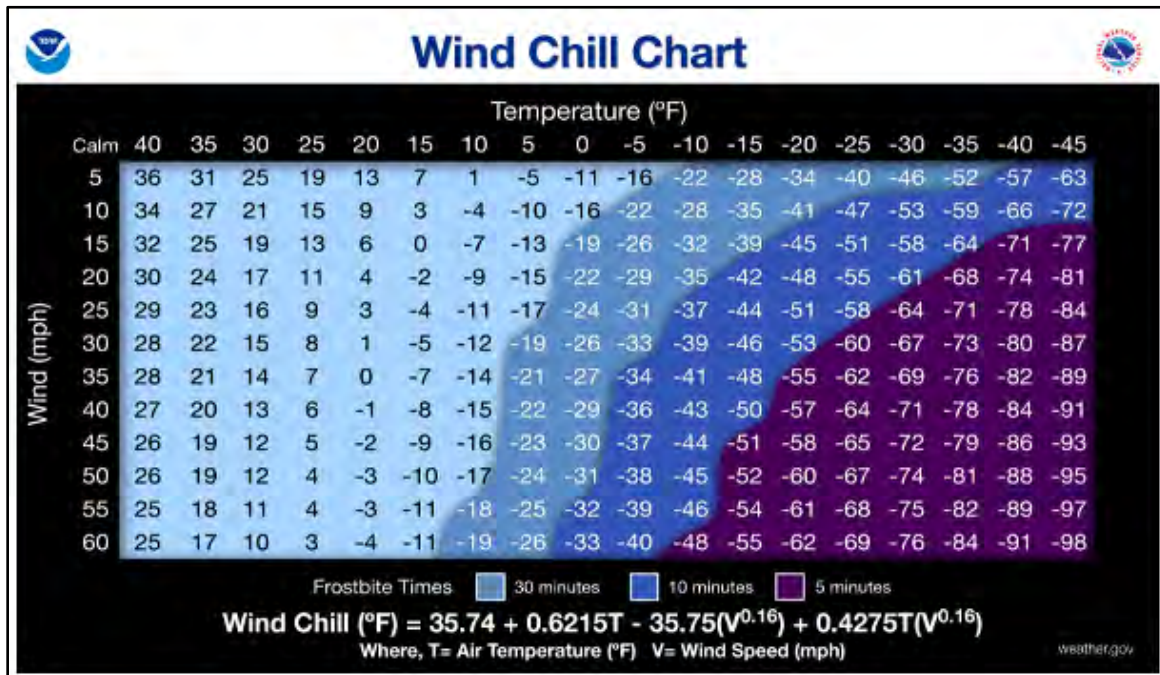

Beaufort Number	MPH		Terminology	Description
	Range	Average		
0	0	0	Calm	Calm. Smoke rises vertically.
1	1-3	2	Light air	Wind motion visible in smoke.
2	4-7	6	Light breeze	Wind felt on exposed skin. Leaves rustle.
3	8-12	11	Gentle breeze	Leaves and smaller twigs in constant motion.
4	13-18	15	Moderate breeze	Dust and loose paper is raised. Small branches begin to move.
5	19-24	22	Fresh breeze	Smaller trees sway.
6	25-31	27	Strong breeze	Large branches in motion. Whistling heard in overhead wires. Umbrella use becomes difficult.
7	32-38	35	Near gale	Whole trees in motion. Some difficulty when walking into the wind.
8	39-46	42	Gale	Twigs broken from trees. Cars veer on road.
9	47-54	50	Severe gale	Light structure damage.
10	55-63	60	Storm	Trees uprooted. Considerable structural damage.
11	64-73	70	Violent storm	Widespread structural damage.
12	74-95	90	Hurricane	Considerable and widespread damage to structures.

Source: [National Weather Service](#)

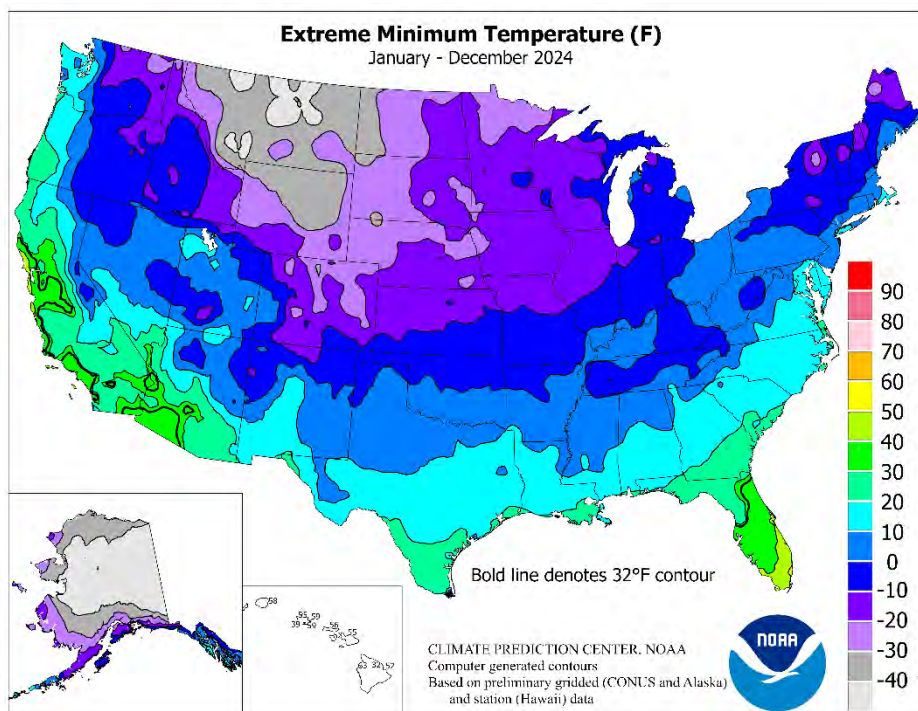

Identified Impacts

- Blocked Roads
- Building Collapse
- Business Interruptions
- Delayed Emergency Response
- Downed Power Lines
- Downed Trees
- Evacuation (Localized)
- HAZMAT Release
- Increased Fire Potential
- Increased Public Safety Runs
- Livestock Injury/Death
- Loss of Economy
- Loss/Overcrowded Medical Facilities
- Loss of Potable Water
- Loss of Power
- Property Damage
- School Closure
- Wind Chill

Wind Chill: The wind chill temperature is how cold people and animals feel when outside. Wind chill is based on the rate of heat loss from exposed skin caused by wind and cold. As the wind increases, it draws heat from the body, driving down skin temperature and eventually the internal body temperature. Therefore, the wind makes it FEEL much colder. If the temperature is 0°F and the wind is blowing at 15 mph, the wind chill is -19°F. At this wind chill temperature, exposed skin can freeze in 30 minutes.

Description

Space Weather refers to variations in the space environment between the sun and Earth (and throughout the solar system) that can affect technologies in space and on Earth. Space weather is primarily driven by solar storm phenomenon that include coronal mass ejections, solar flares, solar particle events and solar wind. These phenomena can occur in various regions on the sun's surface, but only Earth directed solar storms are potential drivers of space weather events on Earth. An understanding of solar storm phenomena is an important component to developing accurate space weather forecasts (event onset, location, duration, and magnitude).

Why does space weather matter?

Space weather is a global issue. Unlike terrestrial weather events, like a hurricane, space weather has the potential to impact not only the United States, but wider geographic regions. These complex events can have significant economic consequences and have the potential to negatively affect numerous sectors, including communications, satellite and airline operations, manned space flights, navigation and surveying systems, as well as the electric power grid.

NOAA Space Weather Scales

Source: [NOAA National Weather Service Space Weather Prediction Center](#)

The NOAA Space Weather Scales were introduced as a way to communicate to the general public the current and future space weather conditions and their possible effects on people and systems. Many of the SWPC products describe the space environment, but few have described the effects that can be experienced as the result of environmental disturbances. These scales are useful to users of our products and those who are interested in space weather effects. The scales describe the environmental disturbances for three event types: geomagnetic storms, solar radiation storms, and radio blackouts. The scales have numbered levels, analogous to hurricanes, tornadoes, and earthquakes that convey severity. They list possible effects at each level. They also show how often such events happen and give a measure of the intensity of the physical causes.

Geomagnetic Storm

Scale	Description	Effect	Physical measure	Average Frequency (1 cycle = 11 years)
G 5	Extreme	Power systems: Widespread voltage control problems and protective system problems can occur, some grid systems may experience complete collapse or blackouts. Transformers may experience damage. Spacecraft operations: May experience extensive surface charging, problems with orientation, uplink/downlink and tracking satellites. Other systems: Pipeline currents can reach hundreds of amps, HF (high frequency) radio propagation may be impossible in many areas for one to two days, satellite navigation may be degraded for days, low-frequency radio navigation can be out for hours, and aurora has been seen as low as Florida and southern Texas (typically 40° geomagnetic lat.).	Kp = 9	4 per cycle (4 days per cycle)
G 4	Severe	Power systems: Possible widespread voltage control problems and some protective systems will mistakenly trip out key assets from the grid. Spacecraft operations: May experience surface charging and tracking problems, corrections may be needed for orientation problems. Other systems: Induced pipeline currents affect preventive measures, HF radio propagation sporadic, satellite navigation degraded for hours, low-frequency radio navigation disrupted, and aurora has been seen as low as Alabama and northern California (typically 45° geomagnetic lat.).	Kp = 8, including a 9-	100 per cycle (60 days per cycle)
G 3	Strong	Power systems: Voltage corrections may be required, false alarms triggered on some protection devices. Spacecraft operations: Surface charging may occur on satellite components, drag may increase on low-Earth-orbit satellites, and corrections may be needed for orientation problems. Other systems: Intermittent satellite navigation and low-frequency radio navigation problems may occur, HF radio may be intermittent, and aurora has been seen as low as Illinois and Oregon (typically 50° geomagnetic lat.).	Kp = 7	200 per cycle (130 days per cycle)
G 2	Moderate	Power systems: High-latitude power systems may experience voltage alarms, long-duration storms may cause transformer damage. Spacecraft operations: Corrective actions to orientation may be required by ground control; possible changes in drag affect orbit predictions. Other systems: HF radio propagation can fade at higher latitudes, and aurora has been seen as low as New York and Idaho (typically 55° geomagnetic lat.).	Kp = 6	600 per cycle (360 days per cycle)
G 1	Minor	Power systems: Weak power grid fluctuations can occur. Spacecraft operations: Minor impact on satellite operations possible. Other systems: Migratory animals are affected at this and higher levels; aurora is commonly visible at high latitudes (northern Michigan and Maine).	Kp = 5	1700 per cycle (900 days per cycle)

Solar Radiation Storms

Scale	Description	Effect	Physical measure (Flux level of ≥ 10 MeV particles)	Average Frequency (1 cycle = 11 years)
S 5	Extreme	<p>Biological: Unavoidable high radiation hazard to astronauts on EVA (extra-vehicular activity); passengers and crew in high-flying aircraft at high latitudes may be exposed to radiation risk.</p> <p>Satellite operations: Satellites may be rendered useless, memory impacts can cause loss of control, may cause serious noise in image data, star-trackers may be unable to locate sources; permanent damage to solar panels possible.</p> <p>Other systems: Complete blackout of HF (high frequency) communications possible through the polar regions, and position errors make navigation operations extremely difficult.</p>	10^6	Fewer than 1 per cycle
S 4	Severe	<p>Biological: Unavoidable radiation hazard to astronauts on EVA; passengers and crew in high-flying aircraft at high latitudes may be exposed to radiation risk.</p> <p>Satellite operations: May experience memory device problems and noise on imaging systems; star-tracker problems may cause orientation problems, and solar panel efficiency can be degraded.</p> <p>Other systems: Blackout of HF radio communications through the polar regions and increased navigation errors over several days are likely.</p>	10^4	3 per cycle
S 3	Strong	<p>Biological: Radiation hazard avoidance recommended for astronauts on EVA; passengers and crew in high-flying aircraft at high latitudes may be exposed to radiation risk.</p> <p>Satellite operations: Single-event upsets, noise in imaging systems, and slight reduction of efficiency in solar panel are likely.</p> <p>Other systems: Degraded HF radio propagation through the polar regions and navigation position errors likely.</p>	10^3	10 per cycle
S 2	Moderate	<p>Biological: Passengers and crew in high-flying aircraft at high latitudes may be exposed to elevated radiation risk.</p> <p>Satellite operations: Infrequent single-event upsets possible.</p> <p>Other systems: Small effects on HF propagation through the polar regions and navigation at polar cap locations possibly affected.</p>	10^2	25 per cycle
S 1	Minor	<p>Biological: None.</p> <p>Satellite operations: None.</p> <p>Other systems: Minor impacts on HF radio in the polar regions.</p>	10	50 per cycle

Radio Blackouts Scale

Scale	Description	Effect	Physical measure	Average Frequency (1 cycle = 11 years)
R 5	Extreme	<p>HF Radio: Complete HF (high frequency) radio blackout on the entire sunlit side of the Earth lasting for a number of hours. This results in no HF radio contact with mariners and en route aviators in this sector.</p> <p>Navigation: Low-frequency navigation signals used by maritime and general aviation systems experience outages on the sunlit side of the Earth for many hours, causing loss in positioning. Increased satellite navigation errors in positioning for several hours on the sunlit side of Earth, which may spread into the night side.</p>	X20 (2×10^{-3})	Less than 1 per cycle
R 4	Severe	<p>HF Radio: HF radio communication blackout on most of the sunlit side of Earth for one to two hours. HF radio contact lost during this time.</p> <p>Navigation: Outages of low-frequency navigation signals cause increased error in positioning for one to two hours. Minor disruptions of satellite navigation possible on the sunlit side of Earth.</p>	X10 (10^{-3})	8 per cycle (8 days per cycle)
R 3	Strong	<p>HF Radio: Wide area blackout of HF radio communication, loss of radio contact for about an hour on sunlit side of Earth.</p> <p>Navigation: Low-frequency navigation signals degraded for about an hour.</p>	X1 (10^{-4})	175 per cycle (140 days per cycle)
R 2	Moderate	<p>HF Radio: Limited blackout of HF radio communication on sunlit side, loss of radio contact for tens of minutes.</p> <p>Navigation: Degradation of low-frequency navigation signals for tens of minutes.</p>	M5 (5×10^{-5})	350 per cycle (300 days per cycle)
R 1	Minor	<p>HF Radio: Weak or minor degradation of HF radio communication on sunlit side, occasional loss of radio contact.</p> <p>Navigation: Low-frequency navigation signals degraded for brief intervals.</p>	M1 (10^{-5})	2000 per cycle (950 days per cycle)

Impacts

Source: [NOAA National Weather Service Space Weather Prediction Center](#)

Space Weather Impacts on Climate

All weather on Earth, from the surface of the planet out into space, begins with the Sun. Space weather and terrestrial weather (the weather we feel at the surface) are influenced by the small changes the Sun undergoes during its solar cycle.

The most important impact the Sun has on Earth is from the brightness or irradiance of the Sun itself. The Sun produces energy in the form of photons of light. The variability of the Sun's output is wavelength dependent; different wavelengths have higher variability than others. Most of the energy from the Sun is emitted in the visible wavelengths (approximately 400 – 800 nanometers (nm)). The output from the sun in these wavelengths is nearly constant and changes by only one part in a thousand (0.1%) over the course of the 11-year solar cycle.

Electric Power Transmission

The electric power grid, and consequently the power to your home and business, can be disrupted by space weather. One of the great discoveries of the 19th century was the realization that a time-varying magnetic field is able to produce an electrical current in a conducting wire.

The basic idea is that the time rate of change of the magnetic flux (i.e. lines of magnetic force) passing through a current loop is proportional to the current that is generated around the loop. A slightly earlier but equally important discovery was that a current-carrying wire produces a magnetic field. The application of these principles is widely prevalent in modern society in electrical power generators, electrical power transformers, and electrical motors, for example.

HF Radio Communications

Space weather impacts radio communication in a number of ways. At frequencies in the 1 to 30 mega Hertz range (known as “High Frequency” or HF radio), the changes in ionospheric density and structure modify the transmission path and even block transmission of HF radio signals completely. These frequencies are used by amateur (ham) radio operators and many industries such as commercial airlines. They are also used by a number of government agencies such as the Federal Emergency Management Agency and the Department of Defense.

Satellite Communications

Satellite communication refers to any communication link that involves the use of an artificial satellite in its propagation path. Satellite communications play a vital role in modern life. There are over 2000 artificial satellites in use. They can be found in geostationary, Molniya, elliptical, and low Earth orbits and are used for traditional point-to-point communications, mobile applications, and the distribution of TV and radio programs.

Satellite Drag

Drag is a force exerted on an object moving through a fluid, and it is oriented in the direction of relative fluid flow. Drag acts opposite to the direction of motion and tends to slow an object. As an example, think of running against a high wind and feeling the drag pushing you back in the direction of relative fluid flow. This same force acts on spacecraft and objects flying in the space environment. Drag has a significant impact on spacecraft in low Earth orbit (LEO), generally defined as an orbit below an

altitude of approximately 2,000 kilometers (1,200 mi). Although the air density is much lower than near the Earth’s surface, the air resistance in those layers of the atmosphere where satellites in LEO travel is still strong enough to produce drag and pull them closer to the Earth. The International Space Station (ISS) and the Hubble Space Telescope are examples of spacecraft operating in LEO.

Space Weather and GPS Systems

The use of single and dual frequency satellite radio navigation systems, like the Global Positioning System (GPS), has grown dramatically in the last decade. GPS receivers are now in nearly every cell phone and in many automobiles, trucks, and any equipment that moves and needs precision location measurements. High precision dual frequency GPS systems are used for farming, construction, exploration, surveying, snow removal and many other applications critical to a functional society. Other satellite navigation systems in orbit include the European Galileo system and the Russian GLONASS system.

Identified Impacts

- Blocked Roads
- Business Interruptions
- Delayed Emergency Response
- Increased Fire Potential
- Increased Public Safety Runs
- Loss of Economy
- Loss/Overcrowded Medical Facilities
- Loss of Power
- Mass Casualties
- Property Damage
- School Closure

History

There is no significant history of space weather within the County.

For G4/S4/R4 or higher events (at least 1 in next 10 years, documented 5 in last 5 years). Space Weather article in the [2025 ND Mitigation Progress Report](#) (pp.32-38), and [2024 ND eMAOP](#) (pp.518-522).

Transportation Accident
(Including vehicular, railway, and aircraft accidents)

Frequency	Likely (10-100% probability in the next year, or at least 1 chance in next 10 years.)
Severity	Negligible (Less than 10% of jurisdiction affected)
Risk Class	C
Seasonal Pattern	None
Duration	Hours
Speed of Onset	No warning
Location	Countywide

Description

A transportation accident is any large-scale aircraft, railroad, or vehicular accident involving mass casualties.

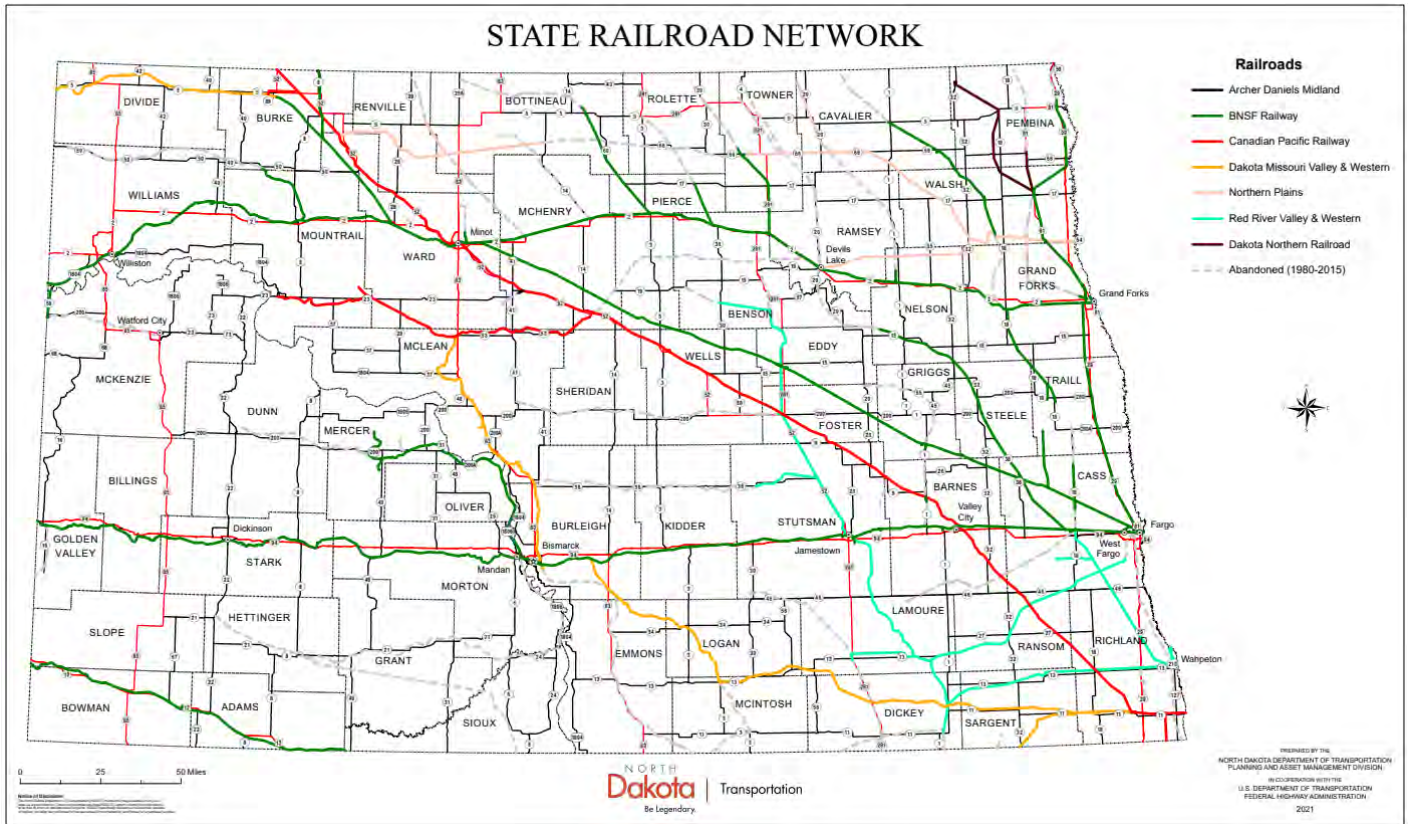

Burleigh County has one municipal airport, railroads, and several major highways.

Vehicle

Interstate 94 is a primary, east/west transportation route intersecting Burleigh County and the City of Bismarck and is north of the City of Lincoln. U.S. Highway 83 is the second most utilized route and runs north/south, intersecting Burleigh County and the Cities of Bismarck and Wilton. The most predominant products observed in the study were anhydrous ammonia and gasolines. (See Attachment 3, Major Roadways in Burleigh County)

Railroad

Two railroads traverse the county: Burleigh Northern Santa Fe (BNSF) and the Dakota, Missouri Valley Western Railroad (DMVW).

Source: [ND Department of Transportation](https://www.nd.gov/transportation)

Airport

The Bismarck Municipal Airport is in the southeast corner of the City of Bismarck.

There were six events in Burleigh County from 2004-2025 with no fatalities.

Plan Maintenance

Monitoring, Evaluating, and Updating the Plan

Plan Maintenance Schedule			
Maintenance Step	When	How	Who
Monitoring	Yearly	Obtain status updates on mitigation actions and identify possible mid-course corrections.	Emergency Manager
Evaluating	Yearly or after a disaster event	Review plan and any lessons learned	Emergency Manager Planning Department
Updating	Every 5 years	Review and update plan as necessary	Emergency Manager Planning Department

The plan will be evaluated annually by the Burleigh County Emergency Manager with input from planning committee members. As a means of monitoring the plan and progress made on the projects, the Burleigh County Emergency Manager will collaborate with planning committee members and representatives identified as “lead agencies” to discuss progress of the projects, existing and potential grant opportunities, how effective they think the process was and the actual action implementation, and any changes in regulations. It will be the responsibility of the Emergency Manager to update the hazard history sections on an annual basis as events occur. The Burleigh County Emergency Manager will also lead a comprehensive update every five years seeking Federal Emergency Management Agency approval.

All disaster or emergency incidents will be evaluated for general/specific mitigation recommendations to be added to the plan as they occur. A comprehensive plan review by the planning committee will occur every five years unless the need arises earlier through aforementioned reviews and actions.

The approved plan is available on the Burleigh County [website](#) for review by stakeholders and the public along with the opportunity to submit mitigation ideas at any time. Burleigh County Emergency Management will continue to promote mitigation actions and seek projects through speaking engagements, social media, and after actual events.

Plan Integration: The Burleigh County Multi-Hazard Mitigation Plan will be considered as building codes are developed and/or updated. The awareness of the hazards and vulnerability may affect future development in hazard-prone areas.

The [Comprehensive Plan for Burleigh County](#) (page 8) ties all other plans to the Burleigh County Multi-Hazard Mitigation Plan:

“Objective 5: Ensure that the County is prepared to address Emergency Management incidents.

Policy: #1 Review and update contingency plans for all hazards identified in the Burleigh County Multi-Hazard Mitigation Plan.

#2 Review and address opportunities for mitigation of potential damage, such as, prohibiting developments in areas of high flood probability.

#3 Encourage County Departments and Boards to review and update emergency policies and procedures.

#4 Ensure that all developments are established with the safety of current and future users in mind.”

The Cities of Lincoln, Regan, Wilton, and Wing will incorporate data from this plan when reviewing their planning and regulatory capabilities (Attachment 4). The City of Regan does not have the funding and staffing to incorporate robust activities in their regulations, plans, and programs.

ATTACHMENT 1: MITIGATION PROJECTS

Mitigation opportunities submitted on priority basis except where urgent/special circumstances warrant highest priority. The emphasis may be the cost benefit review of the proposed mitigation project and the lead agency's ability to provide funding. Implementation and administration of the projects will be through the Burleigh County Emergency Manager unless dictated by the unique specialty or level of expertise needed for the project.

The goals (priorities) remain unchanged from the previous plan. Three goals were identified to provide the general guidance for mitigation activities:

- Protect public health and safety.
- Minimize damage to existing and future property.
- Minimize economic losses and disruption of essential community services.

Projects were prioritized (low, medium, high) during groups meetings, individual input, and group e-mails. Processes included looking at previous history as well as current and projected conditions.

Changes

Burleigh County:

- Sibley Island Flood Control—Sibley Island properties remain vulnerable to flooding from the Missouri River. (Properties voted against, removed)
- Hazardous Materials Routes—Develop and distribute map. (Not legal to designate routes, removed)
- Website yearly accessibility scan (New project)
- National Flood Insurance Program: Consider participation in the Community Rating System (Process started in 2024)
- University of Mary bank stabilization (Completed)

City of Lincoln:

- City Hall—New construction at city center (EOC, Polling Site, Commission Meetings, Training). Existing building would be retained by the Police Department. (New project)
- Lincoln City Hall—Backup Power Source (Grant awarded)
- Lincoln Public Works—Backup Power Source (Grant awarded)

City of Regan: No changes.

City of Wilton:

- Wilton Ambulance—Backup Power Source (completed)
- Wilton City Hall (EOC) —Backup Power Source (applied for grant)

City of Wing:

- Chemical House (Removed, facility demolished)
- Living Snow Fences—Continue to promote living snow fences and shelterbelts to prevent snow drifting and protection from severe summer weather and windstorms. (New project)

Public Input:

The three highest hazards deemed “Highly Likely” (Severe Summer Weather, Fire, and Severe Winter Weather) through the online survey and stakeholder input. Majority of responses indicated recommendations for education, preparedness, burn restrictions which align with existing projects.

Items removed not deemed mitigation projects with long term risk reduction:

- Automatic Notification System—Continue to promote "opt-in" of community.
- Emergency Planning—Continue to evaluate and update current plans.
- Vulnerable Population Registry—Identification of vulnerable populations for utilization in emergency/disaster situations.
- Shelter Planning—Planning and training regarding shelter set-up.
- WMD Training—Stakeholders need continued training.
- Flood Recovery Education—Educate community on flood recovery procedures and assistance.
- Evacuation Routes—Maintenance
- Evaluate Quarantine and Isolation Plans
- Mass Dispensing—Planning, training, and exercises.

ATTACHMENT 4: CAPABILITIES

Based on funding and staffing, improvements on capabilities are lacking for Lincoln, Regan, Wilton, and Wing.

Planning and Regulatory

Types of regulations, plans, and programs utilized. Burleigh County continues to pursue participation in the Community Rating System. The City of Lincoln adopted the 2024 ND State Building Code (International Building Code, International Residential Code, International Mechanical Code, International Fuel Gas Code, International Energy Conservation Code, and the International Existing Building Code as published by the International Code Council) on September 11, 2025 and effective January 1, 2026. Burleigh County adopted the same State Building Codes September 26, 2013 citing “Subsequent editions or revisions of the code adopted by the provisions of this Article shall be considered adopted and in full force and effect within the County upon the approval thereof by the Board and the filing of one copy thereof in the office of the County Building/Planning/Zoning Department. In the event of any conflict between the provisions of the code adopted by this Article and applicable provisions of state law or county ordinances, rules or regulations, the provisions of state law shall prevail and be controlling.”

Regan, Wilton, and Wing have not adopted a building code.

Mitigation Plan	Capability Assessment Risk Assessment Mitigation Actions	X	X	X	X	X

The Comprehensive Plans for Burleigh County and the City of Lincoln take into consideration potential mitigation activities and emergency management activities. The ND Century Code ([NDCC 11-33-03](#)) includes emergency management in the object of regulations “To provide for emergency management, including floodplain management as provided under section 11-11-71. "Emergency management" means a comprehensive integrated system at all levels of government and in the private sector which provides for the development and maintenance of an effective capability to mitigate, prepare for, respond to, and recover from known and unforeseen hazards or situations, caused by an act of nature or man, which may threaten, injure, damage, or destroy lives, property, or our environment.”

The County Emergency Manager maintains the Emergency Operations Plan which is reviewed every two years with a comprehensive update every five years.

The Emergency Action Plan for McDowell Dam is maintained by the Burleigh County Water Resource District with input from the County Emergency Manager. The Garrison Dam EAP is reviewed on an irregular basis with the US Army Corps of Engineers.

Land Use Ordinance also utilize knowledge and data from the mitigation plan for planning—especially floodplain ordinances.

The mitigation plan is reviewed after incidents, and yearly, with a major update every five years by the Emergency Manager with input from all jurisdictions.

Administrative and Technical

Smaller communities have staffing and funding limitations which limit their capabilities. Engineering services contracted on an “as needed” basis for Regan, Wilton, and Wing. Wing Ambulance folded into Wilton Ambulance and maintains a Quick Response Unit.

Agency Capabilities

Bismarck Rural Fire Department

1. Mitigation and Risk Reduction: (including agency's role, capabilities, and programs that support mitigation actions.)
 - a. Respond to fires to protect lives, limit injuries, and minimize damage to property and the environment.
 - b. Respond to accidents to provide rescue assistance.
 - c. Assist Emergency Medical Services in providing emergency assistance to sick and injured (first responders).
 - d. Provide standard firefighting manpower and equipment.
 - e. Respond to spills and releases of hazardous materials and assist in mitigating the detrimental human and environmental effects of these occurrences.
 - f. Respond to emergencies resulting from natural occurrences such as storms, floods, etc., and assist in mitigating the detrimental results of these occurrences.
 - g. Provide training for department members that enables them to carry out their respective duties and responsibilities effectively and efficiently.
 - h. Develop and provide educational programs that promote the prevention of fires and encourage fire-safe and fire-smart activities.
 - i. Assist in enforcement of fire ordinances.
 - j. Fire investigation.
 - k. Provide assistance to other jurisdictions, as department resources and commitments allow.
 - l. Inspections and preplanning within the fire district to reduce hazards and aid in fire prevention.
 - m. Assist with the County's Tier Two reporting for hazardous materials.
 - n. In disaster situations, provide assistance in warning, rescue, evacuation, and situation updates.
2. Responsibility and authority in regulating, inspecting, or funding of projects:
 - a. Grant recipient or project manager
3. Leadership and coordination with other government agencies:
 - a. Local Agencies: In efforts to decrease vulnerability to hazards, the Bismarck Rural Fire Department coordinates with various local agencies. These agencies include Burleigh County Emergency Management, Bismarck Fire Department, Bismarck Police Department, Burleigh County Sheriff's Department, local Public Works, and local Emergency Medical Services.
 - b. Non-local Agencies: North Dakota State Fire Marshal and the Federal Emergency Management Agency.
4. General recommendations/Emergency Management concerns:
 - a. None.

Bismarck/Burleigh Public Health

1. Mitigation and Risk Reduction: (including agency's role, capabilities, and programs that support mitigation actions)
 - a. Deal with bona fide health hazards using cause and effect in those areas for both mitigation and risk reduction. If it is a hazard affecting any number of persons and within the scope of public health, Bismarck/Burleigh Public Health will mitigate or exercise risk reduction through several methods ranging from enforcement of statutes to immunization programs.
 - b. Environmental Health has the knowledge and access to the State Health Department for mitigation of incidents with hazardous or toxic wastes.
 - c. Programs include public health nursing, immunization programs, emergency preparedness, and tobacco cessation.
2. Responsibility and authority in the regulating, inspecting, or funding of projects.
 - a. Bismarck/Burleigh Public Health is a unit of state government that operates through agreements or Memorandums of Understanding with the North Dakota Department of Health to enforce state public health statutes within the five-county district. Tax levies provide funding. There are no funding programs for non-operational programs.
3. Leadership and coordination with other government agencies:
 - a. Local Agencies: Within the scope of public health, Bismarck/Burleigh Public Health coordinates with the following local agencies: Bismarck/Burleigh Emergency Management, local law enforcement agencies (city and county), local school boards, hospitals, clinics, United States Postal Service, volunteer agencies, and planning and zoning agencies.
 - b. Non-local Agencies: Within the scope of public health, Bismarck/Burleigh Public Health coordinates with the following agencies: North Dakota Department of Health and state and federal law enforcement agencies.
4. General recommendations/Emergency Management concerns:
 - a. Public Health is normally underfunded and understaffed at all levels of government. Should Bismarck/Burleigh Public Health be called upon for expertise at a time of emergency or disaster, it normally does not have instrumentation for site level determinations of any kind without support from other agencies.
 - b. Public health agencies should be included in equipment storage, e.g., FEMA equipment "stored" and used at public health agencies, rather than being stored at a warehouse. For example, radio equipment that belongs to FEMA is based at county emergency management offices; the same could be done with air sampling equipment or other instruments/kits etc., which could be used by public health agencies both for daily work and at a time of emergency or disaster.

Burleigh County Emergency Management

1. Mitigation and Risk Reduction: (including agency's role, capabilities, and programs that support mitigation actions.)
 - a. Coordinate emergency planning and response activities with numerous city and county agencies. Planning encompasses preparedness, response, recovery, and mitigation.
 - b. Responsible for daily operations of the Emergency Operations Center.
 - c. Update and exercise emergency operations and mitigation plans.
 - d. Coordinate State-sponsored training for city and county agencies including law enforcement, public health, social services, fire departments, emergency medical services, etc.
 - e. Coordinate the County's Local Emergency Planning Committee.
 - f. Coordinate the County's Tier II reporting for hazardous materials.
 - g. Coordinate public awareness and educational programs via newspapers, radio, and schools to decrease vulnerability to hazards.
 - h. Coordinate timely and effective public information releases during emergency situations.
 - i. During a disaster declaration, emergency management will have all county resources at their disposal including manpower, communications, and equipment.
 - j. With effective planning, training, and exercising, emergency management can help to mitigate potential hazards within the county.
 - k. Assist in damage assessment and coordinate with state and federal agencies for recovery assistance.
2. Responsibility and authority in the regulating, inspecting, or funding of projects:
 - a. Assist with applications for federal and state funding such as the Hazard Mitigation Grant Program.
3. Leadership and coordination with other government agencies:
 - a. Local Agencies: Burleigh County Emergency Management coordinates with appropriate local agencies to ensure preparedness, response, recovery, and mitigation. These agencies include Burleigh County Commissioners, Bismarck/Burleigh Public Health, Burleigh County Highway Department, Burleigh County Sheriff's Department, and various other law enforcement, fire, communication, and emergency medical agencies.
 - b. Non-local Agencies: Burleigh County Emergency Management coordinates with numerous state and federal agencies. These agencies include the North Dakota Department of Emergency Services, North Dakota Highway Patrol, North Dakota Health Department, North Dakota Department of Transportation, and the Federal Emergency Management Agency.
4. General recommendations/Emergency Management concerns:
 - a. A listing of eligible mitigation projects maintained for available grant funds.
 - b. Burleigh County is constantly striving to improve planning and exercise activities and response capabilities; however, the threat of potential hazards is increasing with increasing population and transportation thereby increasing the need for resources, training, and awareness.

Burleigh County Extension Service

1. Mitigation and Risk Reduction: (including agency's role, capabilities, and programs that support mitigation actions.)
 - a. The Burleigh County Extension Service is linked in a unique partnership with North Dakota State University and the United States Department of Agriculture to provide practical, research-based information and educational programs to address critical issues facing individuals, families, agricultural producers, business operators, and communities.
 - b. County Extension Agents serve as subject-matter experts, educational planners, adult and youth teachers and community facilitators in several areas including agriculture and natural resources, horticulture, family and consumer sciences, 4-H and youth community development.
 - c. Provide planning, designing, implementing, and evaluating of educational programs for livestock and forage clientele.
 - d. Areas of responsibility include beef and dairy cattle, swine, other livestock, water quality, waste management, and forages.
 - e. Provide programming for county citizens in the areas of family financial management, environmental concerns, housing, health and wellness, aging, foods and nutrition, parenting, and human development.
 - f. Serve as an information resource in dealing with drought, winter storms, summer storms etc. in relation to agriculture, environment, water resources, etc.
 - g. Assist with damage assessment related to agriculture.
2. Responsibility and authority in regulating, inspecting, or funding of projects:
 - a. Authority is at federal level.
3. Leadership and coordination with other government agencies:
 - a. Local Agencies: Burleigh County Emergency Management and Bismarck/Burleigh Public Health.
 - b. Non-local Agencies: North Dakota State University, North Dakota State Health Department, United States Department of Agriculture, and Farm Service Agency.
4. General recommendations/Emergency Management concerns:
 - a. Urban development taking over agricultural lands.

Burleigh County Highway Department

1. Mitigation and Risk Reduction: (including agency's role, capabilities, and programs that support mitigation actions)
 - a. Design culverts and overflow sections. The County Highway Department follows a very detailed list of design standards for all projects within the county.
 - b. Continually working with the Department of Transportation on various projects since the DOT dispenses federal funding. While the DOT provides technical advice concerning guidelines and standards, they do not provide equipment, materials, or personnel.
2. Responsibility and authority in the regulating, inspecting, or funding of projects:
 - a. Responsible for and have authority to regulate and inspect all projects completed within the county.
 - b. All projects funded by the state or federal government are designed by a professional engineer and meet the usual acceptable federal standards. Inspection of federal aid projects is the responsibility of the engineering staff and is overseen by the North Dakota Department of Transportation to ensure standards are met. Most county projects are designed with in-house expertise and engineers are consulted only if in-house schedules are overloaded or if problems arise.
 - c. All funding in one way or another comes through the county, whether it is a certain percentage of the federal aid project or 100% of the county projects.
3. Leadership and coordination with other government agencies:
 - a. Local Agencies: The County Highway Department interacts frequently with the Sheriff's Department on road usage and speed zones. There is almost daily contact with organized township boards concerning safety, road repairs, road improvements, drainage, and signing. There is considerable interaction with City Planner and Building Inspector concerning rural subdivision roadway development and zoning code enforcement. The County Road Department coordinates with various county agencies concerning right of way and right of way purchasing. The legal aspect of right of way purchasing is overseen by the States Attorney's Office. The land values are occasionally developed by the Tax Equalization office and approved by the County Commission.
 - b. Non-local Agencies: The County Highway Department coordinates with various State and Federal agencies for technical assistance, permitting, environmental concerns, archeological sites, and cultural issues. These agencies include the North Dakota Department of Transportation, US Fish and Wildlife, Corp of Engineers, and the North Dakota Historical Society.
4. General recommendations/Emergency Management concerns:
 - a. Burleigh County Highway Department should assist local government with floodplain management and water development permitting.

Burleigh County Water Resource Board

1. Mitigation and Risk Reduction
 - a. Assist with water damage assessment
 - a. Provide maps

2. Non-local agencies – ND Department of Water Resources

Burleigh County Sheriff's Department

1. Mitigation and Risk Reduction: (including agency's role, capabilities, and programs that support mitigation actions.)
 - a. Responsible for law enforcement and criminal investigation in unincorporated areas of the county and in smaller towns that do not have police departments.
 - b. Provide 911 emergency response through the Central Dakota Communications Center.
 - c. Provide standard law enforcement manpower and equipment.
 - d. In disaster situations, provide warning, rescue assistance, evacuation assistance, security, traffic control, and information assistance.
 - e. Have mutual aid agreements with all surrounding counties and the North Dakota State Highway Patrol.
2. Responsibility and authority in the regulating, inspecting, or funding of projects:
 - a. Grant recipient or project manager
3. Leadership and coordination with other government agencies:
 - a. Local Agencies: Within the scope of law enforcement, the Burleigh County Sheriff's Department coordinates with various local agencies. These agencies include Burleigh County Emergency Management and various local police departments.
 - b. Non-local Agencies: Burleigh County Sheriff's Department coordinates with appropriate state and federal agencies including North Dakota Highway Patrol, North Dakota Attorney General's Office, Bureau of Criminal Investigation, North Dakota State Radio, North Dakota Department of Transportation, and Federal Bureau of Investigation.
4. General recommendations/Emergency Management concerns:
 - a. None.

Lincoln Police Department

1. Mitigation and Risk Reduction: (including agency's role, capabilities, and programs that support mitigation actions.)
 - a. Responsible for law enforcement and criminal investigation in the City of Lincoln.
 - b. Provide 911 emergency response through the Central Dakota Communications Center.
 - c. Provide standard law enforcement manpower and equipment.
 - d. In disaster situations, provide warning, rescue assistance, evacuation assistance, security, traffic control, and information assistance.
 - e. Have mutual aid agreements with surrounding jurisdictions.
2. Responsibility and authority in the regulating, inspecting, or funding of projects:
 - a. Grant recipient or project manager
3. Leadership and coordination with other government agencies:
 - a. Local Agencies: Within the scope of law enforcement, the Lincoln Police Department coordinates with various local agencies. These agencies include Burleigh County Sheriff's Department and Burleigh County Emergency Management.
 - b. Non-local Agencies: Lincoln Police Department coordinates with appropriate state and federal agencies including North Dakota Highway Patrol, North Dakota Attorney General's Office, Bureau of Criminal Investigation, North Dakota State Radio, North Dakota Department of Transportation, and Federal Bureau of Investigation.
4. General recommendations/Emergency Management concerns:
 - a. None.

Metro Area Ambulance Service: Emergency response, patient care, transport, and public awareness and continuing education programs. Metro also has a disaster response trailer available.

Kidder County Ambulance (Steele): Emergency response, patient care, transport, and public awareness and continuing education programs.

Sterling Rural Fire Department: General fire suppression, rescue, hazardous materials response, public awareness, and educational programs.

Wilton Ambulance: Emergency response, patient care, transport, and public awareness and continuing education programs.

Wilton Rural Fire Department: General fire suppression, rescue, hazardous materials response, public awareness, and educational programs.

Wing Rural Fire Department: General fire suppression, rescue, hazardous materials response, public awareness, and educational programs.

Other Agency Resources

Basin Electric: Provide engineering expertise and damage assessment (utilities).

Burleigh County Human Service Zone: Temporary assistance to needy families (TANF), food stamps, medical assistance, childcare assistance, child protection and family social work services, home and community-based services for the elderly and disabled.

Capital Electric: Provide engineering expertise and damage assessment (utilities).

Montana Dakota Utilities: Provide engineering expertise and damage assessment (utilities).

North Dakota Agriculture Department: Assists with situation and damage assessment; coordination with USDA; hazmat technical assistance; state land use program.

North Dakota Fire Marshal: Hazmat route utilization; hazmat technical assistance; situation and damage assessment.

North Dakota Forestry Service: Debris removal from recreational facilities; technical assistance; situation and damage assessment.

North Dakota Game and Fish: Technical assistance; debris removal from recreational facilities; facility improvements; situation and damage assessment.

North Dakota Highway Patrol: Situation and damage assessment; provide transportation resources for movement of state personnel, supplies, and equipment to include air and ground reconnaissance; traffic control.

North Dakota Human Services: Insure liaison with private relief agencies for disaster victims.

North Dakota Job Service: Situation assessment and administration of disaster unemployment assistance programs.

North Dakota State Emergency Communications: Exercise readiness of warning systems and communication support.

South Central Regional Water District: Delivers a reliable supply of safe, affordable, high-quality water to members in a five-county area in central North Dakota including rural Burleigh County.

US Army Corps of Engineers: Water and dam management within the county. Provide technical expertise, sandbags, and heavy equipment.

The Multi-Hazard Mitigation Plan is always available on the Burleigh County website:
Draft published May 19, 2025
Final draft published October 13, 2025

The screenshot shows a web browser window with the URL burleigh.gov/departments/emergency-management/mitigation/. The navigation menu includes "Government", "Departments", "Boards/Committees", and "Contact Us". The main content area features a section titled "2025 Burleigh County Multi-Hazard Mitigation Plan Update in Process". Below the title, there is a link to the "2025 Draft Plan" and a paragraph inviting the public to share mitigation ideas. To the right of the text is a circular diagram with four steps: 1. Organize Resources, 2. Assess Risks, 3. Develop a Mitigation Plan, and 4. Implement Plan and Monitor Progress. Below this is another section titled "2020 Burleigh County Multi-Hazard Mitigation Plan", which includes information about the plan's approval by FEMA in August 2020 and a link to the "2020 Approved (current) Plan". Contact information for Mary Senger, Director of Emergency Management, is provided at the bottom, including an email link and a phone number.

DAKOTA

BISMARCK TRIBUNE

DAKOTA BRIEFS

Burleigh hosting 3 special meetings

Burleigh County residents will have several opportunities outside of regularly scheduled County Commission meetings to weigh in on a proposal to change the auditor/treasurer position from elected to appointed.

The Commission will host two special public comment meetings in rural communities on Saturday. The first will be at 10 a.m. at Wilton Memorial Hall, 105 Dakota Ave., in Wilton. The second will be at 2 p.m. at the Sterling School, 118 McKenzie St., in Sterling.

Additionally, the Commission will host a special public comment meeting at 10 a.m. Saturday, March 29,

in Bismarck. That meeting will be in the Tom Baker Meeting Room in the City/County Building, 221 N. Fifth St., in downtown Bismarck.

The Commission has already hosted public hearings during both regular meetings in March. An additional public hearing will be held during the April 7 regular meeting.

County residents who are unable to attend the public comment meetings can submit written comments on the Burleigh County website at <https://bit.ly/4iZmcGD>.

Fedorchak to hold telephone town hall

North Dakota's sole member in the U.S. House

of Representatives will host a call-in town hall on Tuesday.

Republican U.S. Rep. Julie Fedorchak's office said the call will provide "thousands of North Dakotans the opportunity to engage in a productive discussion about the issues that matter most to them."

Fedorchak is a freshman member of Congress who ran last year for the spot after now-Gov. Kelly Armstrong opted to seek the governorship.

The call will take place at 6:30 p.m. on Tuesday. Residents who want to participate must sign up by 5 p.m. on Monday on Fedorchak's website. To register, go to <https://bit.ly/4hpiGIs>.

The event will be livestreamed on her official

website and Facebook page.

Bismarck, Burleigh residents asked for mitigation plan input

Burleigh County and Bismarck are seeking community input regarding how to make the area safer from potential hazards and disasters.

Plans to mitigate potential hazards are approved by the Federal Emergency Management Agency and require an update every five years.

Area residents are asked to complete a questionnaire by April 10. It is available at <https://bit.ly/4kWCi7>.

Central ND News

Bismarck seeks public feedback for hazard mitigation plan update

GOVERNMENT

By Central ND News

Mar 26, 2025

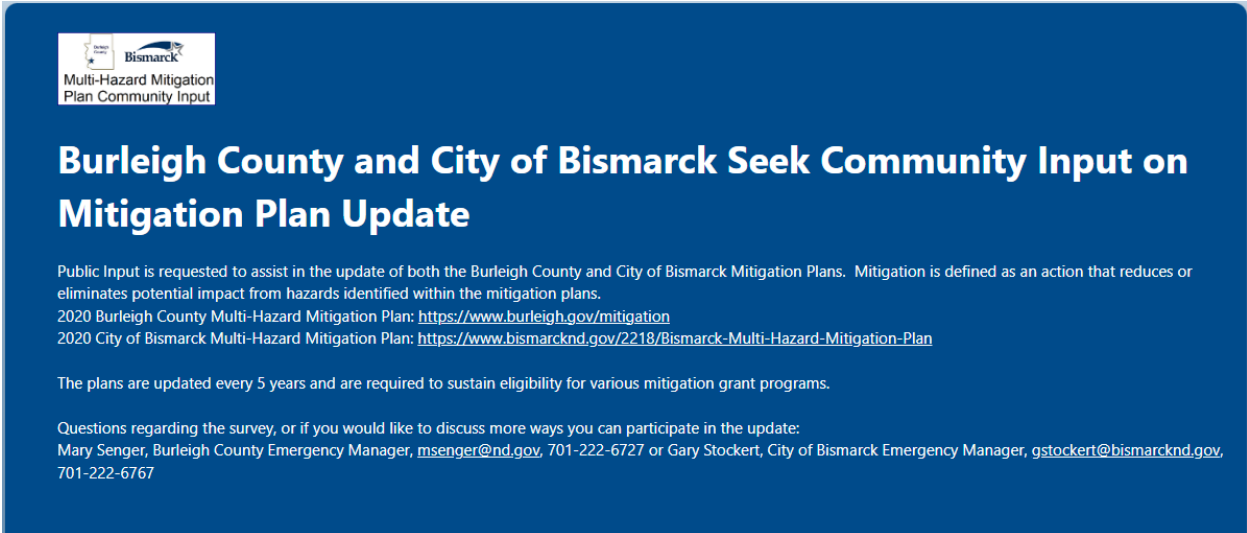

The City of Bismarck, in collaboration with Burleigh County, is seeking community input to enhance safety measures against potential hazards and disasters. The current mitigation plans, approved by the Federal Emergency Management Agency, require updates every five years.

Residents are encouraged to participate by completing a short questionnaire available online at burleigh.gov and Bismarck Emergency Management. The deadline for submission is April 10th.

The initiative aims to create safer communities by reducing loss of life and property, enabling quicker recovery from disasters, and lessening the financial impact on individuals and communities.

Survey
(90 responses)

Burleigh County and City of Bismarck Seek Community Input on Mitigation Plan Update

Public Input is requested to assist in the update of both the Burleigh County and City of Bismarck Mitigation Plans. Mitigation is defined as an action that reduces or eliminates potential impact from hazards identified within the mitigation plans.
2020 Burleigh County Multi-Hazard Mitigation Plan: <https://www.burleigh.gov/mitigation>
2020 City of Bismarck Multi-Hazard Mitigation Plan: <https://www.bismarcknd.gov/2218/Bismarck-Multi-Hazard-Mitigation-Plan>

The plans are updated every 5 years and are required to sustain eligibility for various mitigation grant programs.

Questions regarding the survey, or if you would like to discuss more ways you can participate in the update:
Mary Senger, Burleigh County Emergency Manager, msenger@nd.gov, 701-222-6727 or Gary Stockert, City of Bismarck Emergency Manager, gstockert@bismarcknd.gov, 701-222-6767

When you submit this form, it will not automatically collect your details like name and email address unless you provide it yourself.

* Required

1. Where do you live? *

- City of Bismarck
- City of Lincoln
- City of Regan
- City of Wilton
- City of Wing
- Unincorporated Burleigh County
- Other

2. Select three hazards you feel are the highest threat to your area. *

Please select at most 3 options.

- Civil Disturbance
- Criminal, Terrorist, or Nation/State Attack
- Cyberattack
- Dam Failure
- Drought
- Fire (including urban fire or and wildland fire)
- Flood (including riverine, levee failure, ice jam, and flash floods)
- Geologic Hazards (including landslide, abandoned land mines, expansive/unstable soils, environmental minerals, meteorite falls)
- Hazardous Materials Release
- Infectious Disease and Pest Infestations (including human, animal, and plant diseases)
- Severe Summer Weather (including downbursts, extreme heat, hail, lightning, high wind, and tornado)
- Severe Winter Weather (including blizzards, extreme cold/wind chill, heavy snow, ice storms, structure collapse)
- Space Weather
- Transportation Incident (including vehicular, railway, and aircraft accidents)

3. What potential impacts concern you most relating to the hazards you selected above?

Enter your answer

4. What preventative measure(s) would you recommend for any of the hazards you selected above to minimize or eliminate the potential impacts?

Enter your answer

5. If you or a family member are considered an at-risk population (such as a senior citizen, individual with disabilities), what are your concerns during an incident?

Enter your answer

6. Is your home located in a floodplain? *

- Yes
- No
- I don't know

7. Do you have flood insurance? *

- Yes
- No
- I don't know

8. If "No," why not?

- Not located in floodplain
- Too expensive
- Other

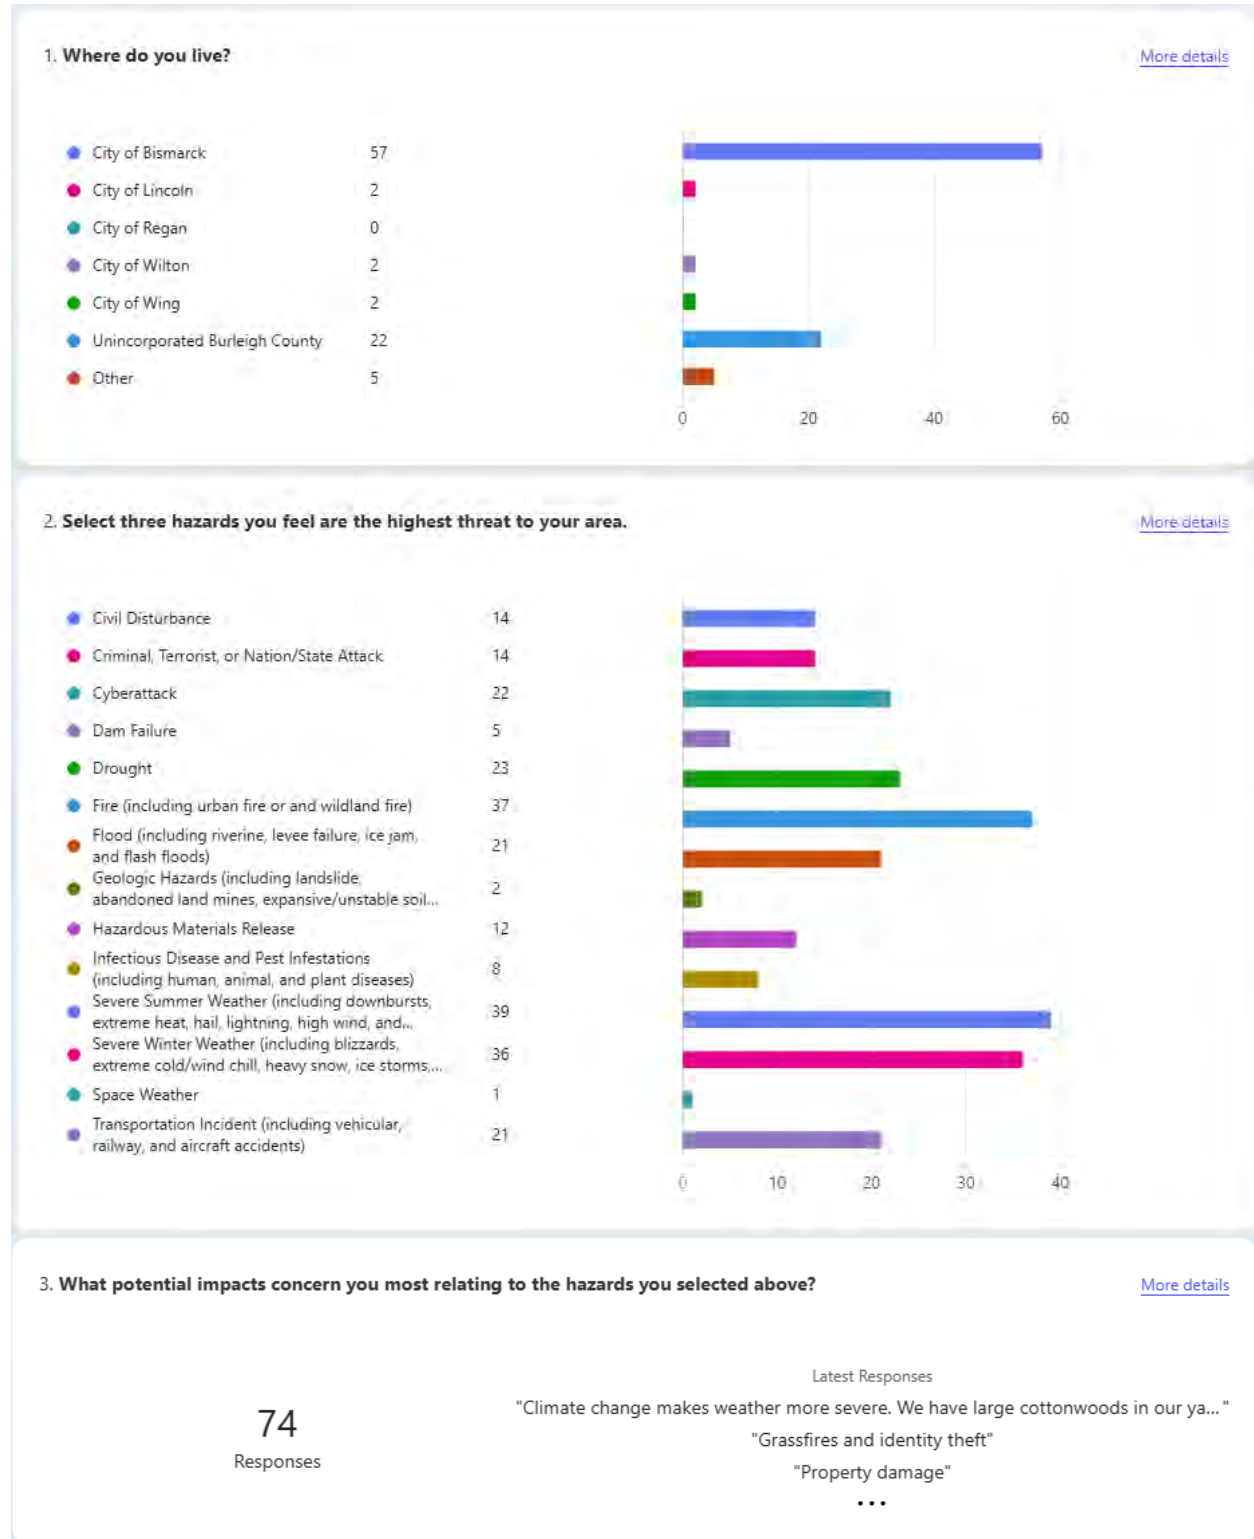

9. What is the most effective way for you to receive information about how to make your home and area more resistant to hazards? *

- Newspaper
- Television
- Radio
- Email
- Social Media
- Regular Mail
- Websites
- Other

10. This survey may be submitted anonymously; however, if you provide us with your contact information (name, phone number, email), we will have the ability to follow up with you to learn more about your ideas or concerns (optional):
